PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

President American Houdan Club, From 1900 to 1907.

VOL. XXVIII NEW YORK CITY, JUNE 15, 1908. No. 705

Written expressly for the American Fancier

American Market Duck Culture

: : : By : : :
Theo. F. Jager

HAVING given due considerations to all questions affecting the locality of the duck plant to be, as exemplified in a previous paper, we come now to the actual plant to be erected thereon, the houses for the breeding stock, brooding houses, incubator cellars and graineries.

While it is true, that the ducks are naturally hardy and as a rule fail to appreciate and in consequence thereof in a majority of cases fail to be accommodated with a good house, a henman's point of view considered, yet, on the other hand, anything that we may be able to do for the breeding stock in the line of tight, ample houseroom will not lack thanks from them in the shape of getting in better conditions followed by more substantial returns.

Ducks can stand crowding more than any other stock. Let us, however, beware to crowd them in discomfort. A flock of from thirty to thirty-five head—the general flock, divided into about five drakes and thirty ducks for the beginning of the breeding season—should have a pen of not less than 150 square feet as house room, more will be better, if it can be given. The house need be but of the simplest construction. Six feet high in the rear or north and sloping down to as low as four feet in the front or south, with a width of ten or twelve feet, it can have a length sufficient to accomodate all the pens necessary, if the lay of the ground permits it, or houses may be built containing two, three or four pens each, that are separated from thirty to fifty feet from each other. This arrangement allows larger and broader outside yards, more exercise in the breeding season, stronger legs in the old birds and better eggs for hatching. The breeding house roof may be of shingles or tar paper or any of the many roofing papers now extensively advertised. The drawback to tar paper, however, is its heat drawing characteristic in summer, making the inside temperature unnecessary high and enervating to the inmates. A small, oblong window, laid on its long edge, will suffice for each pen in the south. A trap door should be made in at least every other pen in the north wall to facilitate the handling of manure and fresh bedding. The walls should be tight, need contain but the cheapest kind of boards in one thickness, if the whole is to be covered with paper or matched stuff, if paper is not to be considered. It must be wind and water tight, whatever else may be lacking. A damp house will not do, ducks can stand any amount of low ground and dampness during the day or a part of the day, while out roaming and hunting, but they must have a dry house upon their return at night. Nothing will detoriate a flock of ducks quicker than a damp house and nasty bedding.

The fixtures for the breeding quarters should consist of a feed trough or troughs for each pen, ample in size to allow all birds to partake of their feed at once, and a large grit and shell box. The divisions between the pens in a long house are best made out of nine-inch boards, three of them leaving an inch space between the boards. Wire, often used for this purpose, is not to be recommended, because the birds, if ever frightened, will pile up against it and twist and bend it out of shape, finally getting over it. The exit hole should be in the center of each pen, at least 12-inches high and 24 inches wide, that the birds will not crowd and injure themselves while going in or out. Ducks are apt to go out all at once in the morning and will bunch up in the hole, if a narrow one, and frighten each other for many days to come. Avoid all fancy fixings in or near a duck house. Avoid sliding doors or windows, for they will not work in wet or damp weather or when dirt gets between them. There is nothing better than windows and exit doors fastened with hinges at the top, that they can be hooked up and out of the way. Doors should be closed from the outside, after the ducks are in, windows should be fastened or opened from the inside, after the ducks are out in the morning or before they have returned at night. Never enter the house while the ducks are in it, unless it is the habit to feed there, and even this had best be done outside in all weather, except when blizzards are raging.

The fences between the outside yards can be made out of two-inch mesh wire, two feet wide. As ducks are fouling the ground quickly, unless of a very sandy and porous nature, annual plowings are in order and the fences on most large plants are simply and quickly made or taken down by using short stakes driven in the ground. Fasten the wire to them with two or three staples and take care not to drive the staples all the way in, that they may be pulled out easy and quickly, when the taking up again has to be done. Where the running water or pond is shallow or narrow, it is best to run the division fences all the way in or through the water. Should the water at freshet time, however, represent danger to fences, large panels 12 feet long, and 2 feet or more wide, had best be used, that they may be taken out temporarily until all danger of washing away is passed. Common laths are good for making these panels duck tight.

Before going over to the brooding house construction and describing incubator cellars, which had best be given in connection with the hatching and raising of the young ducklings later on, we shall after giving a few words to graineries and feed rooms, begin the task of handling breeding stock. The feed room, generally built in connection with the grain storing room, should be handy to the road and centrally located. From it, the center of all, many trips will have to be made daily to all parts of the plant and locating it wisely, will mean endless time and money in labor saved for all years to come. A house having a cellar for the storing of root crops would be ideal for this purpose. Water for mixing feed and cooking fish or greens, as it is sometimes done, should be close on hand. The feed room should contain the large heater and large troughs, six feet long and from 20 to 26-inches deep and about two feet wide for mixing of the ration. If these troughs can be built on wheels, moving on a track to the pens where the ration is to be fed out, it will greatly facilitate feeding and save in energies to the feeder. Where the grain storing can he had over head, shutes may be run down to the mixing trough thus doing away with a second handling of the grain. This will be found to be of great advantage, as it is not uncommon on large plants for a man to mix up fifty or more bags of feed during a day in the height of the growing season. A five pronged short handled fork and a short handled spade are the only tools required for the mixing. In keeping the spade sharp, it is also used for chopping up greens of all kinds that are to be fed, mixed in with the grain ration raw.

Take care in building or locating the feed room, that it is rat tight, have either a cement floor augmented with a concrete foundation or raise the building a foot or more above ground, that a good ratter can get at pests, when they do appear, as they certainly will.

How had we best begin? Is it wise to get the stock, or is it cheaper to secure eggs for hatching and wait another year? All things considered, we advise the buying of well mated breeding stock from a farm, that has been doing business for some time and that has made a reputation for square dealing and has gained a reputation for quick growing, healthy ducks. It will be found the cheapest in the end, because a year's time is gained and the experience in taking care of breeders will come to good advantage for the years to follow. Do not start in with a large flock. Buy a unit. In saying unit, we mean a pen, such as you would have later on, five or six drakes and from twenty-five to thirty ducks. In order to be sure, that birds are unrelated, get the drakes from one firm and the ducks from another. The best time to buy them is in early fall or late summer. April and May hatched ducklings are needed and doubts may exist later on, if December sold birds are not July hatched.

The universal craze for size has no exception with the duckmen, they are all after it, even those, that well know, that size does not mean everything. Do not allow yourself to be led astray with size alone. Look for vigor, agility, bred on a free run principle, and you will be better off, even if the birds are a trifle less in weight. Buy the best birds—we don't count on fancy points such as clear bills free from black or green spots in this—you possibly can get. Don't swiggle over the price. Good birds bred right cost money to raise and produce, and you will be in the boat of the seller yourself some day. Ducklings weighing five pounds or more ten weeks of age cannot be bred from small fellows, that is true enough, but large ducks, no matter what the size and their weight, cannot produce them, if not backed by primeval vigor and hardiness. Large females weighing about 7½ to 8 pounds at maturity are good ones to mate unrelated drakes weighing about two pounds less. It is a safe rule, no matter what the birds weigh, to allow the drakes to be the lightest, that means to eleven pound ducks—the exception, of course, for whole flocks—use eight or nine pound drakes. Bear in mind, however, that the medium sized birds are the best payers for market under all conditions.

Common-sense Poultry Feeding

"MANY men, many minds"; and many circumstances call for many different kinds of treatment! I am led to make these remarks by constantly reading and hearing about the right and wrong way in which to feed our fowls. We read about the benefits of the "dry mash," "balanced rations," etc., etc., until the novice becomes absolutely confused,, and, in sheer desperation, reverts to the old "mixture," and blames the fowls if the egg yield does not come up to expectations.

All this is very misleading to a beginner, for it is absolutely impossible to lay down any hard and fast rules which will be applicable to each and every circumstance. The fact is that practically anything that is edible may be fed to poultry with advantage, the very constitution of a fowl requiring a mixed and varied menu. But the poultry-keeper must use his common-sense. For instance, a certain amount of fat is both good and necessary, but common-sense will tell us that to feed our birds on fat alone, or even a large quantity, will not be good. Maize is tabooed by nearly all writers in the poultry press, yet many farmers, whose hens are out in all weathers on a free range, use little else, often with good results, says A. F. Uncle in *Feathered Life.*

So it will be seen that to recommend any one course would be entirely misleading, and would lead to many disappointments. The one great mistake made by the large majority of poultry-keepers—especially those with confined runs in back gardens—is that they feed too much.

It is one of the easiest things possible to overfeed a fowl, a very difficult thing to underfeed (unless, of course, no food at all is given); and if the aim is to get eggs, and the results are not satisfactory, I would unhesitatingly say, "Cut down the food," and am confident that there would be a marked improvement in nine cases out of ten. I have kept fowls successfully in confined runs for sixteen or seventeen years, and have found that, in spite of what has been said against barley-meal, it is a very good food, if judiciously used. But to feed on barley-meal *alone* would never do. I mix one part barley-meal to two parts middlings, and use this mixture for about one third of the quantity of food given.

The other two-thirds are made up of waste vegetables—especially cabbage and the like—boiled until soft, and then finely minced. A little salt is added, and if there are any waste bread or meat scraps, etc., these are all added—chopped fine.

For a change, biscuit-meal is used instead of the barley-meal, or, if cheaply procurable, Sussex ground oats; but variety is chiefly obtained by the various vegetables that one happens to have from day to day. One day it may be chiefly potato-parings, another greenstuff, yet another a mixture of bread and fat, etc.

Meat is necessary occasionally, for those birds which cannot roam the fields in search of insects, etc., or in frosty weather, when the earth is covered with snow or ice; but I make no practice of supplying so much per day.

A hen would probably obtain much more of this sort of food one day than another, and I believe in following Nature wherever possible.

I have found by experience that wheat is about the best food in the way of corn. Oats are largely advocated, and, if really good, heavy oats are obtainable, are no doubt a valuable food; but there are so many inferior samples offered as "good enough for fowl," that one hesitates before recommending it.

However, we also have barley, buckwheat, dari, peas, etc., not forgetting maize, all of which may be given with advantage. I never advise a mixture in any case, for those to be had at the corn-chandler's are often the sweepings of the floors, and contain many useless and sometimes dangerous seeds, and if the best of corn is obtained separately, and mixed, we are not able to give the birds any change.

Reverting to the soft mash, I should say that fowls require bulky food, rather than a highly concentrated diet, and it is for this purpose that a large proportion is boiled cabbage-leaves, potato-parings, etc.

In this direction, bran is very valuable. Bran contains small feeding properties, and, given dry, is likely to cause looseness by reason of its coarse nature, but if well scalded some half-hour or so before used, and allowed to swell, it may be added to the other food to make bulk.

As regards quantity: This is another very difficult—almost impossible—problem to solve. Fowls have large crops (able to contain at least two good handfuls of food), and, if allowed, will gorge themselves more, perhaps, than any other animal—they are very greedy.

They should not be allowed, however, to eat as much as they will. In spite of what those who don't know might call cruelty to animals, keep your birds always hungry. Mine are always on the look-out for food, and whenever I go near the runs will fly to the wire as though they were starved. Yet they lay well, and are in the best and hardest of condition.

My neighbors wonder how I get so many eggs. I reply: "Hatch at the right time from the best layers, and don't overfeed."

From these remarks the novice may see that it is not so much what is given to the hens as the way it is given, and so will form his own opinion as to what is best for his own stock.

I should add that two feeds a day are enough for most birds—early morning and an hour before sunset—with plenty of loose litter in which they may scratch in hope of finding a stray corn. Fowls on open range will often do well during the best part of the year with only one feed per day—*i. e.,* a handful of corn at night before going to roost.

Exterminating Vermin

By R. B. SANDO.

THE management of fowls in the summer, when the weather is excessively warm most of the time, requires more care and attention than is often given. This is especially true with regard to keeping down lice and mites.

Vermin breed and multiply so rapidly during warm weather that they will almost completely ruin a flock before the owner realizes that his fowls are afflicted with the pests or can definitely locate the source of the trouble.

Poultry keepers who relax in the attention they give to their poultry during the summer time, permitting the fowls to roost in the barn, on fences, or any other place that the fowls may choose, sometimes find their flocks in a condition in which many are sick or droopy without any apparent cause; and the ailment is often pronounced cholera and the fowls dosed up with some kind of medicine for this disease, when the trouble is really caused by vermin. These pests, once they get a good start, are continually present in the poultry quarters but it is during warm weather that they are particularly numerous and bothersome, and unless the process of extermination is vigorously engaged in, the pests will cause the poultryman a great deal of trouble or positive loss.

Where the fowls are afflicted with the red mites or lice, not only will the house in which the fowls roost be swarming with the vermin, but also all nearby fences, woodpiles, trees, or wherever the fowls have been for any length of time, and it is useless to attempt to get rid of the mites as long as they have possession of so many different locations. These pests will soon so annoy the fowls that they will begin to droop and become exhausted from loss of blood by the sucking parasites, getting a little worse each day, and in extreme cases death puts an end to their misery.

Remedies should be used with the idea of removing the difficulty at all cost. First, the poultry house should be thoroughly cleaned out and the fowls made to roost therein and not outside. If not already so constructed, the roosts should be arranged so that they do not touch the walls of the house at any place, and then when they are gone over with a lice-killing preparation, it will be impossible for the vermin to escape. Then, the entire interior of the house should be thoroughly drenched with common kerosene oil, as this is instantly fatal to all lice with which it comes in contact, adding a gill of crude carbolic acid to every quart of the coal oil; or, better still, use a reliable brand of prepared liquid lice killer, the fumes of which are equally as fatal to vermin as the liquid itself. Every portion of the interior must be saturated—nests, roosts, walls and floor. The aim should be to do the work thoroughly at first so as to save labor afterwards, for to destroy some of the lice and allow a part of them to remain indefinitely is only a waste of time and labor. Where they are numerous, there are eggs of lice hatching every hour, and it is essential that the young ones be killed early in their existence. To make the work sure, the house should be thoroughly drenched or painted with the materials stated above every two or three days for a week and then once a month during the remainder of the period of warm weather. One or two thorough aplications during the winter time is, ordinarily, as often as is required.

The body louse is not nearly so hard to exterminate as the red mites, for it stays on the body of the fowl all the time and may easily be reached by giving the fowl a good dusting with a reliable brand of insect powder. This process is a little tedious and unpleasant sometimes, but one may have the pleasing assurance that it is absolutely certain to do the work if the brand of powder used is a reliable one.

The fifth annual exhibition of The Twin Seas Poultry Association will be held February 8-13, 1909. W. C. Denny has been selected as judge. L. Frank Cleveland, secretary.

EAST VIEW POULTRY YARDS
BALLSTON SPA. N.Y.

Good Light Brahmas.

We publish herewith two photographs of Light Brahmas just as they were taken in the breeding yards of the East View Poultry Yards, at Ballston Spa, N. Y. They have bred Light Brahmas exclusively for years and have won many prizes at shows.

The Light Brahmas are indeed a grand fowl, one that has stood the test of years and when rightly handled are extra good layers. We speak of this because we know that it is the handling of stock that makes layers as much as the stock itself.

The Light Brahma is one of the most beautiful birds that is reared, are very attractive and quiet in the show room and in some strains the setting qualities have been practically eliminated. They are very hardy, bear confinement extremely well and may be kept behind a very low fence without any trouble. For a person loving the beautiful, the stately, the old Light Brahma is the fowl that will fill the bill as well as the egg basket. Join the Light Brahma Club and help along the good points of a good breed.

* * *

Red Lice in the Poultry House

Some years ago, says a writer in the *Globe Democrat,* our hen house was badly infested with red lice. I will give my way of getting rid of them, for I think it is a good one; at least it proved successful. We began by pulling out the old roost, which was nailed against the wall, and then whitewashed the walls and nests.

We poured some kerosene on the cracks around the nests. The kerosene will run along the cracks and kill all the lice it gets on. The floor was covered with sand. We then put up a hanging roost by taking some lath and nailing one end to the ceiling and fastening another lath that is to be used as the roost to the other end with a wire.

After you have the roost up, dust the chickens with powder to destroy the lice that are on them. This hanging roost is very important. Have it far enough away from the walls so that the chickens, when on it, will not touch the walls, and do not let any chickens roost on the nest or anywhere else.

The red lice do not breed on the chickens, as the large gray or white lice do. They lay their eggs in the cracks around the roost and nests. Most of them leave the chickens in the morning and go on them again at night. In this way you can quickly get rid of all the red lice. Even if you only make the roost, you can get rid of the lice, for they can not get on the chickens at night. But it will take two or three months before hey will all starve, for they live on one another.

If the coop is full of red lice, the chickens look sickly. Do not set any hens in places where there are red lice. Move them after dark to a nest where you wish them to set. They generally sit well this way if you keep the nest dark for a day or two. The large gray or white lice never leave the hens. Dusting with powder is about as good as anything to kill them.

Replies to Mr. Harry B. Miller

Regarding the First Columbian Wyandotte at Madison Square Garden.

Dunmore, Pa., June 6, 1908.

Editor of AMERICAN FANCIER,
New York City, N. Y.

I wish to reply to Mr. Harry B. Miller's letter in your paper of June 1st. Mr. Miller says I failed to correct his error in giving Mr. L. L. Bright credit for winning 1st Cockerel. I did not deem it necessary to correct same, for the simple reason he has given credit to whom credit belongs in this article published May 1st, which reads in part as follows: "All other specials were won by Oliver Brey on 1st Cockerel, etc." This in my mind was a correction and especially to fanciers nearby who were at the show, and positively know who was in the winning class. I think my correction in regard to specials for best collection was fair enough when I simply stated he won $5.00 special for best display in C. W. class, also $5 special for best cock. I am not in position to say who won the C. W. club ribbons. Mr. Miller questions why I can say so positively that Mr. Bright's winning N. Y. pullet was not in Scranton show. I made Mr. Bright a cash offer for that pullet before it had fully matured, and possibly saw and handled that particular pullet as many times as anyone outside of Mr. Bright. I saw the pullet before and after coming from Madison Square, and was struck especially with the bird for her beauty, and could pick her out of Mr. Bright's flock at any time. While the Scranton show was in progress, I saw Mr. Bright's N. Y. pullet in his cellar and I noticed the pullet was out of condition. If Mr. Miller is so positive that I cannot tell which pullet it was, then how can he so positively state that he won over 1st N. Y. pullet.

Mr. Miller says that Mr. L. L. Bright should have asked such persons as Judge Stanton, or parties who were connected with the Scranton show. I wish to say that Mr. Bright protested Judge Stanton's decision on cockerel class, and two birds were thrown out.

The question arose whether or not Mr. Bright's cockerel had been taken from its coop, or if it had a defect that would render it unnecessary to be inspected closely. Judge Stanton could not remember if that cockerel had been taken from its coop or not. How can he then settle a dispute of this nature when he cannot remember a bird like this for one day after judging the class, and this he acknowledged before the crowd. Judges have lots of birds to look over and I do not think he could give a positive answer.

Thanking you for your fairness, I am

Yours very truly,
HOMER B. HAND.

Dunmore, Pa.

* * *

Scranton, Pa., June 6, 1908.

Editor of AMERICAN FANCIER,

I have read with great interest Mr. Miller's two letters in your valuable paper and would like to state what I know about it. I am a neighbor of Mr. Bright and visit his yard very often. I saw Mr. Bright's winning pullet in his cellar after the New York show; I asked Mr. Bright if he was going to show that bird in Scranton. He simply told me no, that the bird had won enough for a pullet. Now there was another gentleman in the cellar at the time who heard the conversation, that had seen this bird at Madison Square.

All of Mr. Bright's friends knew that he would not show this pullet in Scranton. I also saw this pullet in Mr. Bright's cellar while the Scranton show was in progress.

Now I don't want to make hard feelings with Mr. Miller or anybody else, but I will swear to the above statement if necessary. Now, Mr. Editor, I wish you would publish this letter in your next issue of AMERICAN FANCIER.

Very truly yours,
E. A. DETTE.

Scranton, Pa., June 6, 1908.

Editor of AMERICAN FANCIER,

Mr. Miller seems to want to criticise Mr. Hand's letter of May 15th in your valuable paper. Mr. Miller mentions F. O. Magargee, W. L. Wieddigan, E. C. Ricker, J. W. Sheeble, Jr., and A. W. Close as better qualified than Mr. Hand, all of them being officers of the Scranton show. Now I have not spoken to these gentlemen about our little dispute. If the above-named gentlemen want to investigate the matter, I will offer in evidence my three Scranton pullets and the New York winning pullet. This would probably freshen up their memory. The other gentleman that you mentioned in your letter—you know there is hard feelings existing between him and me, but if he has anything that he wants to say let him write it up, as I can prove my statement to be true and honorable. Now Mr. Miller let's hear from them.

Yours respectfully.
L. L. BRIGHT.

Fresh Air for the Hen.

In a recent issue of THE AMERICAN FANCIER I notice a breeder gave his experience in using fresh air to cure poultry ailings and thought it might be of benefit to your readers to know of my experience.

Just a day or two before the snow storm of May 6th, I found one of my White Wyandotte pullets a good deal the worst for wear. She could not stand and I expected she would die every minute, but as a last resort put her out of doors for a few minutes, but that did not revive her, so I put her back in an open coop and then gave her about a teaspoonful of charcoal. The next day she was able to stand and again I gave her some more charcoal and some feed. She rattled as if she had the roup. The next morning the snow drifted in front of her coop but not into it, and after the storm was over the hen was well, so I put her with the flock and she afterwards was all right.

This seems to me as if the fresh air had something to do with the cure; in fact, many times I gave the birds that were out of condition, when housed in a glass front house, and after they had a free range and plenty of air, no matter how cold, have found that they were greatly improved and never once did it retard the egg production.

MRS. H. A. MCCLINTOCK.
Livonia, N. Y.

Chickens Killed by Foxes.

Are not so numerous as some people think. *Forest and Stream* states the following: "It is very easy to find fox tracks about the remains of a bird and then say a fox did it. I believe that many of the offenses laid at his door are committed by weasels, mink and wildcats or lynx. During a part of the year I have known foxes to spend a part of each day digging among potato hills in a retired hollow for white grubs or mice in the adjoining fields and to return to the mountain at nightfall, passing a farm which was almost covered with young poultry out for grasshoppers. From an experience of about ten years in a locality where there are more foxes than in any part of Essex county, I am convinced that this animal destroys but few, if any, chickens. Our trouble there was, first of all, hawks, then skunks, owls and raccoons. The fox never invaded the chicken coops or broke up the sitting turkeys out at the base of the mountain. Of course, in winter, a fox may sometimes trap a grouse in the snow at night; but who has ever seen a fox actually catch a grouse? Come, now, brothers of the forest, be honest and own up. I would be glad to learn how the fox does the trick, if any one has seen it done.

Poultry Fanciers Present a Gold Watch to Mr. A. W. Close.

Twelve of the leading poultry fanciers of Scranton, Pa., presented to Mr. A. W. Close a twenty-one jeweled gold watch as a token of their appreciation for his unselfish work at the last three poultry shows. The poultry fanciers consider Mr. Close's work of great value to poultry interests in this section of the country. Through the untiring efforts of Mr. Close, the Scranton show is today one of the best held in the country and each year seems to be gaining a stronger foothold among the representative shows. The donors of the watch were: R. F. Alden, John Borthwick, C. W. Brockway, F. O. Megargee, Thos. Brown, W. H. Hagen, J. R. Heffelfinger, Olney Pratt, Sr., G. W. Swartz, C. E. Tobey, R. E. Weeks.

* * *

Beginning with the July 1st issue *Farm Poultry* will be published monthly instead of semi-monthly.

For a number of years this publication made its appearance on the 1st and 15th of each month, but now as it has changed to a monthly it leaves THE AMERICAN FANCIER the only semi-monthly in the poultry world.

We will continue to give the news while it is news.

We regret our semi-monthly contemporary *Farm Poultry* will discontinue appearing on the 1st and 15th of each month and will be issued monthly.

Farm Poultry during its life as a semi-monthly was in the mails promptly on its issuing dates and we hope that they will continue being punctual as a monthly, this will make many of the present monthly publications mail their issues on time instead of from one to three weeks late, as is the present custom of a number.

We wish *Farm Poultry* all possible success, but it is not our wishes but rather the ability which has manifested itelf in the semi-monthly which will make the new monthly a success.

A meeting of the Empire Poultry Association Inc., will be held at Johren's Hotel, Mineola, L. I., Saturday June 20th, to decide on the place and dates for their next annual exhibition. Being unsuccessful in finding a suitable building in the city of Brooklyn the association will probably decide to hold its exhibition at Richmond Hill, L. I., again this year.

* * *

The Secretary of Agriculture estimates the value of last year's eggs at $600,000,000. That is 8 per cent. of the entire product of the farms, says *Batten's Agricultural Directory.*

On every farm which has the usual amount of live stock, three or four times as much poultry could be raised with very little extra expense. If the rats were disposed of and proper poultry houses provided, the value of the egg product would be easily doubled. If the small boys on American farms were given a little enthusiasm for the care of chickens and turkeys, that $600,000,000 would very soon be lifted into $1,200,000,000. The value of corn last year—America's greatest crop—was $1,350,000,000: and Secretary Wilson calls it "fabulous." The American boy, enthused by a rifle for the rats and a hammer for the coops and a bit of pocket money for his enterprise, can make the eggs and poultry equal the corn.

* * *

The Sunswick Poultry Farm, Plainfield, N. J., are making up a list of Orpingtons that they have for sale, to make room for the young chicks. Among the birds to be offered will be the celebrated Black Orpington "Pride of Kent" without an equal as his winnings will prove, as a sire he is one of the best. All will be described in the list. Those who desire Orpingtons of a reliable strain should write to the above farm.

The half-tone on the title page of this issue represents four Oriental Frills owned by Ernest Ebisch, Erie, Pa.

This variety is most attractive and of late an unusual amount of enthusiasm has been displayed by fanciers of this variety.

* * *

June should be one of the best if not the best month for the pigeon fancier during the breeding season. The pigeon family seem to be divided into varieties or classes, those whose main points of excellence are size and strength, and the other rather lack of size and delicacy. To the former belong such birds as the homer, dragoon, carrier, etc., to the latter the jacobin, fantail, owl, turbits, etc. Therefore in the yearling classes at our shows those that depend on their development for their attractive points should be hatched early in the season, which gives them ample time for this development. Such varieties as the fantail Pigmy Pouter, etc., the later hatched bird will not be handicapped.

The breeding operations can be carried on until the latter part of July, when all birds should be separated. Breeding during the early moult of the parent birds invariably causes canker in the progeny.

* * *

The American Pigeon Club should be in a position to ably handle the band question next season.

The press has given columns to the question and many sides have been aired, and we trust it will be of advantage when the club can capably handle such an important question and has the strength to enforce its rulings, then and not before should it dictate to the breeder just what make of bands he shall use.

We are of the opinion that the officers of the Club have made such rulings for the betterment of the fancy in general, but after making the laws they should be in position to carry out their end of the affair.

The enforcement of a ruling relative to the make of bands which shall be used can do a lot of harm to the shows held throughout the country especially the smaller ones. In speaking of the small exhibitions to a leading fancier a few days ago he expressed his opinion that they were of little benefit, etc., to the fancy. In this our esteemed friend was in error and only showed the writer of these notes what a narrow knowledge of the fancy he possessed. It is a well-known fact the small exhibitions, fairs, etc., do more for the fancy, than a great many of the large winter shows held in the big cities. We would gamble that out of every thousand that visit Madison Square Garden during the pigeon exhibition not more than 200 have a suitable yard which could be used for a pigeon loft; now at some of the smaller shows over two-thirds live in homes with plenty of space for either pigeons or poultry. How many of the fanciers of to-day were attracted to their hobby at either New York, Boston or Chicago poultry shows?

* * *

In a recent issue of that English publication, *Pigeons,* we clip the following: "Mr. Harrower has just received a most appreciative letter from Mr. Havemeyer, of New York, in which the writer says: 'The cock I had from you a year or two back, the one that won the M. C. S. bowl for you, and which I selected with others at your lofts, is still the best fantail in America. This year at our New York Show he took the prize for the best pigeon in the whole show, nearly 1700 birds. He is considered the best fantail living, and he comes very near to it, except, I think, our white hen is a shade better.'"

To the above letter the editor added: "It is gratifying to find that Old England yet can breed fantails to beat the world."

Having judged the fantail classes at New York for the past two years the writer was surprised to learn that this cock was really an imported bird.

We always believed that he was raised at Mountain Side farm but now find we were in error.

Although we are not gratified in the statement "Old England yet can breed Fantails to beat the world," yet the statement is nevertheless true. In believing the statement true we do not base our opinion on the one Havemeyer bird.

In the January exhibition at Madison Square Garden, 1907, the bird referred to in the letter was placed second to Mr. Rowland's Stevenson cock, which was also an imported bird.

Although the two birds are of different types each have their superior points, and after being equally weighed on January, 1907, the Rowland bird was given the preference.

Be that as it may, we consider them the best in America, and now sad to relate, both saw the light of day on the shores of another land and their superior properties produced through the skill of our English cousins.

After a conversation with a leading fantail breeder who visited the last Palace show in England we believed through knowledge we gleaned from him that America produced the better fantails, but after the above statements we rather change our opinion.

* * *

It is most gratifying to us that America has produced saddleback fantails, which have more than held their own against those imported for the occasion.

The American invasion of the English shows should be postponed for a few years at least. We need time.

* * *

Reading, Pa., will be in the field next winter with a poultry and pigeon show. The dates, Dec. 7, 12, 1908, have been claimed by the Association lately organized of which E. B. Ulrich is president; T. H. Orr, treasurer, and W. L. Fulmer, secretary. The Auditorium has been rented, which is the largest in Reading.

* * *

Mr. N. M. Shaw, of Jersey City, N. J., one of the younger generation of fantail enthusiasts, who gained considerable recognition at the last Madison Square exhibition will move into his new home about July 1st. Needless to say a building will be constructed to house the pigeons.

By the appearance of the babies bred during 1908 some of the old timers will have to make considerable headway to pass the Shaw string at the coming shows.

We have had the pleasure to watch this loft during the present season, and so far the young stock show a vast improvement.

* * *

One of the most up-to-date lofts which we have seen in many a day shelter the Helmets and Hollanders of A. E. Robst, Rutherford, N. J.

On a Sunday afternoon a few weeks ago we drove to Rutherford, N. J. Although we had visited this New Jersey town a number of times before we have never had the pleasure of inspecting these birds at home.

After inquiring the location of Carlton Hill, a suburb of Rutherford, we soon saw in the distance the large dome of the Hawthorne Aviaries.

The lofts which contain three large rooms were comfortably filled with the varieties which are connected with the name of Robst.

The quality of the parent stock is too well known to those interested in these classes at our shows.

In looking over the 1908 crop we were surprised to find so many well marked birds, and a couple of young reds and yellows took our fancy, and if they continue to improve will cause some trouble in getting past these next winter.

We have taken considerable interest in the helmet—have judged them at the shows; but one must see them in their loft to really appreciate their beauty.

The Hollanders, one of the tumbler varieties, too, are grand to have enclosed within one's aviaries—their solid colored bodies with white tails makes them very attractive. In the latter varieties blacks and reds were the ones to show improvement.

Besides the pigeons Mr. Robst keeps a few head of fowls we believe; just six hens for his own table. The card showed 118 during the month of March, which kept the family well supplied during the early and hungry month.

Besides Mr. Robst to care for the feathered tribe at at the Hawthorne Aviaries they have the watchful eye of Mr. Carl Krueger, who is of great assistance in the mating and management of the German varieties.

* * *

Ashbrook, N. J., June 5, 1908.

H. M. Pockman,

Editor The American Fancier,

Dear Sir: One of your readers has lost a red homer pigeon, band No. x22230.

He was nearly killed by an express train near here, having his wing cut off by the wheel so cannot fly.

The children have taken care of him, and he has recovered and goes around with the half grown chicks, the same size as himself.

I have notified you as he looks a valuable pigeon and perhaps someone is wondering what has become of him.

Yours truly,

Arthur S. Croft.

Oriental Frill Club.

This is a busy time of the year for all fanciers, but it is time to make our plans for next winter's shows. First we must get in all the new members possible, and start young fanciers who will later become members, if they will not now.

Samuel Black of Lebanon, Pa., and Dr. J. F. Roe of Milwaukee, Wisconsin, have just become members, and I have the promise of one or two others. There are still others on the fence who need encouraging. It sometimes takes two or three years to get a fancier to join, but it is worth the trouble. Remember, the more members, the better the specials.

There are some who are a little tardy with their dues, and to these I would say, don't put off too long, for the ballots for judge and place of meet will be sent out in June.

Several members have written Mr. Ebisch and offered specials for next season's shows. Some have offered them for club meet, and others have designated certain shows, which is a good idea, as we do not want to put all of our eggs in one basket. Many have not said what they desire their specials placed on, so I will not give a list at this time, but to those who have not offered anything, I would say that more can be used.

More articles have appeared on Orientals this year than ever before, but there seems to be a falling off just now, which should not be. Write up something for the new fancier which will help him. Give him your experience with this variety of pigeon, and I am sure it will be appreciated. There is no one but what can write an article on this subject, and who can tell how much good it may do. It is up to each member of the Oriental Frill Club to determine the future of the Oriental.

A. A. Ashley,
Secretary.

Pigeon Keeping for the Beginner.

During the breeding season the would-be successful fancier must be up betimes in the morning. Firsts, specials and challenge cups are not for the sluggard. If young pigeons are to make prize-winners in after life they must be kept growing, and the best way to keep them growing is to let them have plenty of good food, early and late, says C. A. House in the English publication, *Pigeons.* Pigeons, like all other winged fowl of the air, are early risers, and they begin to move about as soon as the sun is above the horizon; and for young pigeons to have to run about for a long time in the cold air of the early morning with nothing in their crops is not conducive to growth of body, muscle or feather. As it is most important that these should be developed in the best manner possible, it will at once be seen how necessary it is that the young birds should go to bed with their crops full, and have them replenished as early as possible in the morning, because during the long watches of the night the food given at eventide will have been digested, and all its warmth-giving and growth-giving properties assimilated. Warmth is a great factor in the growth of a young pigeon's body, and also in its feathering.

Now we are all of us fully aware that we ourselves feel the raw, nippy air of the early Spring mornings far more before breakfast than we do after, and if we do—how much more must the naked squabs and half-naked squeakers! With a full stomach they not only grow and make feather, but their bodies are strengthened and built up so that they are able to withstand the microbes of any disease which may be stalking about. It must ever be remembered that birds which are only half-fed, or improperly fed, are even more prone to disease than those which by reason of good feeding are strong, lusty, and of full habit. The ordinary rules of life hold good all through the animal world, and what is good for man is also good for beast.

Therefore I say to all my young friends: Never neglect to feed your pigeons early in the morning, especially during the breeding season. It may not be over pleasant to turn out on the frosty mornings of the early part of the season, but it is absolutely needful if the birds are to do well; and further, the benefit of the early rising will not all be on the side of the pigeons, although that should be enough to bring it about. Early rising brings its own reward in increased health and vigor to those who practice it.

By the time the second pair of eggs are due to hatch the first pair of babes will be able to do for themselves, and they should be removed from the house in which they have thus far lived. If it is not possible to remove them to another house—well, then, they must perforce remain, but when and wherever possible young squeakers should be removed from their parents about two or three days before the next family is due. The reasons why this should be done are several. In the first place they will, if left, interfere considerably with the freshcomers, and with the comfort of their parents; they will be continually clamoring to be fed, and thus will get a share of the food which should go to nourish their younger brothers and sisters. They will also be climbing about in the nest pan, and possibly trample the new babes to death, or if they don't do it themselves they will cause their parents to do so. Another point in this direction is also worthy of consideration. Should it so happen that the parents are so enamored of their new family, they may not make any attempt to feed those whom they know should be starting life on their own account, and the consequence is that the squeakers,

having been used to receive their meals from their parents, stand about waiting for the food which cometh not, and thus their growth and development is checked. This does not happen when they are taken away and placed in another loft. They are out of sight, and out of mind of their parents, and self-preservation being the first law of Nature they soon set about feeding themselves. It sometimes happens that when babes number two make their appearance that the parents not only refuse to feed babes number one, but will so resent their presence that they set about them, pecking them with their beaks and hitting them with their wings, and in this manner do them serious injury. From this it will be seen that for the sake of the parents, for the sake of the early family, and for the sake of the younger babes, it is wise and prudent to have a nursery house to which all young birds may be removed as succeeding nests come round.

The weaning time is an important period in the lives of our young squeakers, and under the very best of conditions they not only do not make headway for a few days, but they go backwards and lose ground somewhat. This, however, may be minimized to some considerable extent by their owner constituting himself forster parent for a few days if necessary. For a few days sometimes, the novelty of their new phase of life seems to prevent the squeakers from feeding as they should do. Should this happen, their owner must resort to hand feeding in the manner I described in my last article.

This, too, is the time when those splendid aids to pigeon culture, Woods' Nutritive Capsules, are of the greatest benefit. At this time more than any other are they of service to the rearer of high-class squeakers, and many a life will they save if given two or three times a day. Many and many a future challenge cup winner has owed its life to them, and the fact that they are used by many of our leading fanciers in all varieties puts the hall-mark upon them. If they are found to be of service by men who are well versed in the management of pigeons, how much more valuable must they be to the young amateur who is not up to all the little dodges which experience teaches?

This is one of the things in which the amateur of to-day has an advantage over fanciers of ten or twenty years back. In those days there were none such. Good food even was difficult to obtain, but now we have corn chandlers all over the kingdom taking far more interest in pigeon corn than they used, and some even making it a special line of their business. This being so, pigeon-keeping to-day is a much more pleasant and profitable hobby than it used to be in the days of yore.

* * *

The Barb

Address by J. T. SAUNDERS,

Before The National Peristeronic Society of England.

Mr. J. C. Lyell says, in his book of fancy pigeons, that it was owing to some importations of Barbs from the South of France, made by Messrs. John Baily and Son about thirty years ago (this would mean about fifty years from now) this pigeon exists in our country in its present excellence. Its French name is the Polish Pigeon (Pigeon Polonais). It is certain that the Barbs which came from the South of France were far superior to what were here previously; and though the name of this bird in French is Pigeon Polonias, it may have another in the South. It is evidently an ancient variety, and more nearly allied to the highest type of the Owl tribe than any other. Both may have existed from pre-historic times.

First of all I will deal with the size, for it is clear to me that for many years there has been a difference of opinion regarding this.

I certainly prefer the weight not to be over one pound, in fact, two ounces lighter if possessed of sufficient substance, which, of course, is very hard to get, but when obtained should be highly valued, and rewarded accordingly.

Head large. Skull square of equal width from front to back, and as broad as possible, say 1⅛ to 1¼ in. (measured between, not over, the eye wattles) for cocks, and a little less for hens, although I have seen both sexes of this measurement, but some even more, but I have noticed they have been too coarse and scarcely fit for the show pen. The forehead should be broad, prominent and well filled out, and form a curve from the crown of the skull to the tip of the beak, occasionally there is a little flatness of skull, which I do not object to if minus of sharp angles. At the same time I must say that I prefer them without this flatness. I like to see an indented line on each side of the forehead as if carved out, which gives a nice modelled appearance in head such as is not seen in any other variety.

The beak should be very short and stout, and the gape very wide, and both mandibles approaching each other in massiveness as much as possible. I don't like the measurement to be more than 1 in. from inner edge of eye to the tip of beak (measured in a straight line). I believe Mr. P. H. Jones (in Fulton's "Book of Pigeons") gives ⅞ in., which for an extra small bird I think is correct. In blacks only, do I care to see the beak just tipped with black. I have frequently seen the black running right to the opening of the gape, and sometimes part of the beak wattle, which probably has been done to matching this color a little too often together, or it may be constitutional trouble, perhaps through inbreeding.

The beak wattle should be as free as possible from rough wartiness and show a clean division in the centre. At maturity it ought to have filled up all inequality in the curve of the forehead and upper mandible, and I have no objection to it standing out a little.

The eye should be as pure white or pearl-colored as possible, though many are rather red at the outer edge. White Barbs, of course, are the exception, as they usually have bull, or hazel eyes. I have heard of these having been seen with pearl eyes, but I have never seen any.

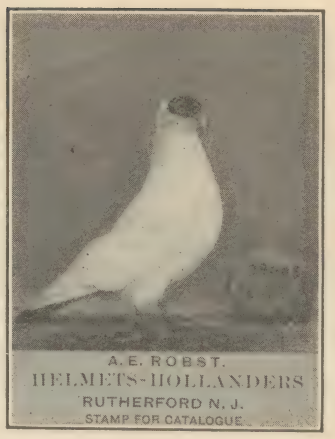
The eye wattles (or, as most fanciers call them, "eye ceres") are a grand property in the Barb. It continues to grow for about four years under ordinary conditions, but if kept less confined will grow slower, and there is an advantage in this, for it will certainly keep its color much better, and I assure you these slower growing specimens are more likely to last longer, and be much less trouble. They may not be able to win in the old classes quite so early, but I venture to say that once they are able to do so they will be heard of again, for they can stand the showing better than the soft, overdone specimens we now so frequently see. The larger these wattles are in diameter the better, and should be of an equal width all around, and thickest at its outer edge, setting away from the head, not inclined to fold over as in Carriers. The color should be of a deep, bright red, nicely crinkled, which gives such a beautiful freshness in appearance.

I must here make a point of the importance of quality of eye wattles against quantity and softness. During the last show season I am sorry to say that I saw birds shown with eye wattles of a flesh color, or, rightly speaking, without color, and it seems clear to me the more they have of this soft, colorless, spongy flesh round the eye the more likely they are to win under some judges (if I may call them so). I say this is wrong, and that a dead set must be made against it, if the variety is to flourish.

The neck short and nicely tapering to a very broad breast, any gullet or fullness of throat takes away the wished-for appearance of a stout, massive head set on a thin stem, which most of us like to see. A gullet such as is desired in the Owl tribe is a fault to be steered clear of.

The legs short and free from feathers below the knee joint, we occasionally see them with such down to the middle toe, but this is not wanted. The thigh slanting well back, and the foot brought forward, which gives this pigeon the desired squatty appearance—length of leg, 4½ to 4¾ inches, measured as in Pouters.

The flights a fair length, and carried neither high nor low, but lying on each side of the tail. Secondary flights prominent, resting on the outer flights is, without doubt, the correct style. Measurement from tip of beak to tip of tail, 13 to 14 inches.



The Barb can be seen at the present time in five colors—black, red, yellow, white, and dun. Not many years since (say about seven years), black was the predominating color; this is usually good, but today I venture to say that the reds far outnumber all the other colors put together, and very many of them are poor in color, with body, rump, and tail of a dun color. This, I am sure, can be altered, for a Barb, being a self-

* * *

The Importation of American Turkeys

AN announcement has appeared in several papers to the effect that a Boston admirer of King Edward has just sent a present to His Majesty of three live turkeys, and it is stated that they were shipped to England a few days ago. The kind thought that evidently prompted such a gift is very pleasing, and it is gratifying to learn that there are those in the States who are anxious to show their appreciation and respect. The fact that some turkeys have been imported, however, is to be very greatly regretted, because that extremely troublesome disease known as blackhead is very prevalent at the present time among American turkeys. So far, we in this country have been remarkably free from this complaint, and it would be nothing short of a calamity if this disease was to become at all common. When Mr. Edward Brown returned from his American trip he published some remarks upon this important subject, and he strongly advocated the restriction of the importation of turkeys from America until the disease was thoroughly stamped out. It may be, of course, that the three birds sent over from Boston are absolutely free from this disease, and we sincerely hope they are; but it must be confessed that it would have been infinitely safer had the birds not arrived.

The Rhode Island Experimental Station has devoted a considerable amount of attention to the subject, and has published some extremely valuable information concerning the nature of the disease. The parasite that is responsible for this complaint is a microscopic animal capable of living within the tissues of the turkey—its host. It can, therefore, eat, grow, and reproduce itself in large numbers, thereby causing irritation, destruction of the tissues, and nearly always death of the invaded turkeys. Although so very elemental in its structure, this parasite has practically destroyed the turkey industry of New England, and is rapidly depleting the western flocks. The disease was first noticed in 1895, and in June of that year Dr. Theobald Smith reported on "an infectious disease among turkeys caused by protozoa, which in Rhode Island is known by the name of blackhead." He further stated that, "While it might be well to return this as a popular name, we do not believe that all cases of blackhead have the specific disease herein described, nor all the turkeys affected with this complaint manifest the appearance of blackhead." When turkeys die after a long-continued illness their heads, which are usually red, become more or less darkened. In acute cases they die so quickly, however, as to leave no impression as to a change of color of the head. The majority of the poults die after a day or two of droopiness. Adults may droop longer, and pass into chronic stages of the disease. Refusal to eat and standing apart constitute late symptoms. Starvation in chronic cases produces thinness. Most affected turkeys die during storms—their circulation seems deficient, and unable to carry them through severe changes. When they are noticed in time, and are dieted in the confinement of a colony house, many may become convalescent that would otherwise die from exposure. One point of great interest to turkey-raisers is that the experiments show that more than four-fifths of the young poults exposed to infected yards die before they are six weeks old.—*Feathered Life.*

HOMERS FOR SQUAB RAISING

We sell only selected birds, actually mated and matings GUARANTEED. Each bird is banded, and list and description of every pair given to purchaser.

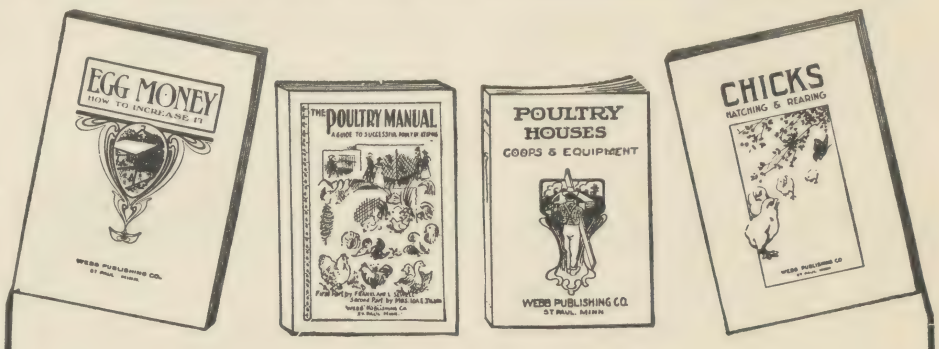
Explain the quality of the birds you have for sale to a large audience, of well-to-do poultry men and doubtless you will make many sales.

an Ad in



talks to an immense audience of successful poultry fanciers, many of whom are wealthy men who breed merely for pleasure and who subscribe to this paper only. They are big spenders and if the quality of the stock offered is worthy of their attention we know of no better place to advertise it than in THE AMERICAN FANCIER.

In addition to the thousands of fanciers who subscribe to this paper we have thousands of readers who are beginners and just starting to raise poultry.

Victoria, B. C.

At a meeting of the Victoria, B. C. Poultry Association, W. C. Denny was engaged to judge the annual show to be held the week of January 25th, 1909. W. E. Nachtrieb, secretary.

YOU NEED OUR

Profit-Making Poultry Books

POULTRY MANUAL

A Complete Guide to Success.

Contains 168 pages, illustrated; everything the fancier and exhibitor want to know about the leading standard breeds, breeding show winners, etc. (written and illustrated; by F. L. Sewell, world's greatest poultry artist); utility points of the standard breeds; value of different grains for feeding poultry; best methods of feeding; how to make farm poultry pay, prevent and cure diseases etc. **Price, 25 cents, postpaid.**

EGG MONEY

How to Increase It.

Contains 128 pages, completely illustrated; thoroughly covers the profitable production of market eggs, including: breeding, rearing, housing and feeding layers, to get eggs when the price is high; marketing to obtain better prices; the 200-egg hen; preserving eggs to keep fresh till the price goes up; descriptions of successful egg farms and the methods of conducting them, etc. **Price, 25 cents, postpaid.**

CHICKS

Hatching and Rearing.

A book of 128 pages, illustrated. It tells how to build a satisfactory, inexpensive incubator house; hatch and rear with incubators and brooders and with hens; explains up-to-date care of the growing stock; developing, fattening and marketing; the broiler business; the profitable "soft roaster" industry, etc. This book will save its cost in the growth of one chick. **Price, 25 cents, postpaid.**

POULTRY HOUSES

Coops And Equipment.

This book contains 100 pages, 93 illustrations and over 50 complete plans; it explains how to build the best and cheapest large and small houses (for all climates), roosting and brood coops, all fixtures and utensils; how to make the best foundations, floors, walls, roofs, nest ventilators, show coops, shipping coops, drinking fountains, etc. **Price, 25 cents, postpaid.**

Send 25 cents and any book you select will be sent you by return mail. Address all orders to

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

Breeding For Eggs Under Present Methods Proven to be a Fallacy

By Rev. C. E. PETERSEN

IT is about ten years ago when the first beginnings of the trapnest system was inaugurated among poultrymen, and before that date it would have been extremely difficult to have found any that was making an effort to increase the yearly egg yield by breeding for it, and the first great impetus was given by the Maine State Experiment Station when the late Mr. Gowell undertook to carefully investigate what the results of selective breeding would be in the increase of the annual egg yield per hen.

From the beginning of these experiments we followed with a great deal of interest his conclusions, though most of the time we were at variance with his methods as almost every one of the noted Poultry Journals will testify to in examining our contributions to them covering the same number of years as these experiments lasted.

We could not help to feel that the system at bottom was wrong for the inevitable results would we felt sure prove a failure.

And what undoubtedly will create an immense sensation in the world of poultry has come to us, for in the last report from the station, in which the results of the past nine years has been carefully tabulated, it has been proven conclusively that the methods of selecting the best layers for reproduction has proven an entire failure in breeding a superior strain of layers.

The method employed was to select by the trapnest system the best layers of the flock and the limit of "relatively high laying" was taken at 150 eggs, all birds laying more than that in their first laying year were used as breeders during the nine years which this experiment was continued.

The cockerels used in this breeding experiment were sons of birds laying 200 or more eggs in their first laying year.

Up until the Summer of 1907, no particular attempt had been made to analyze these records of egg production and to see what light they threw on the laws governing the process itself.

In July, 1907, the Department of Biology of the station was organized and commenced its work.

One of the first tasks undertaken in this department was the analysis of the egg records, first part of which is now in the hands of the U. S. Government printer awaiting publication.

This first portion of the discussion of the records of egg production deals with the annual records, and it is to be understood that this summary is a direct compilation from the extended and detailed papers by Doctors Raymond Pearl and F. M. Surface, the Biologis of the station.

Now the conclusion of the nine years experiment is as follows:

I. There is a large amount of variation among individual birds in respect to annual egg production. The range of variation extends from zero to approximately 250 egg in the records of the station. The *amount of variation* in regard to egg production is substantially the same at the end of the selectio experiment as it was in the beginning. It will be recognized by every stock breeder that this is an important fact to be taken into consideration in passing an opinion on the value of the method of breeding poultry which was tried in the experiments.

II. The general trend of average annual egg production has been slightly *downward* throughout the nine years of experimental breeding for egg increase, which is shown in the following table which gives the annual egg production for the years 1899 to 1907:

Year and Pen	Birds Completed the year	Eggs Laid	Actual Average Production
1899-1900.....	70	9,545	136.36
1900-1901.....	85	12,192	143.44
1901-1902.....	48	7,468	155.58
1902-1903.....	147	19,906	135.42
1903-1904.....	254	29,947	117.90
1904-1905 50 bird pens..	283	37,943	134.07
1905-1906 50 bird pens..	178	24,827	140.14

It should be noted that in the later years of the experiment (from 1902 on), there occurs, in all but one year, some accident which may be held to have diminished the egg production below what it should normally have been. In the detailed discussion of these figures in the complete report the most liberal allowance possible is made for these accidents and *there is no evidence of any increase in the average production of the flock.*

For all the discussions regarding the wonderful work done, and the immense circulation, both here and abroad, given publicity to this matter in glowing accounts, we finally get in return what was long suspected by the more conservative breeders, An Inflated, If Not To Say False Record.

And as an excuse to the public at large, the following reasons are given:

1. Faulty methods of handling the statistical material.

2. Arithmetical mistakes.

And those who have followed the previous developments of the station's breeding for eggs will still have a third reason which will perhaps be better left unspoken.

Commerialism and scientific investigation does not go well together, as is correctly stated in another part of the bulletin from which we have quoted.

It is interesting to follow Doctor Wood's conclusions, in which he says that there is a great amount of detailed evidence which goes to show that the quality of high productiveness cannot be regarded as any more a fixed characteristic of the station's strain of Barred Plymouth Rocks now than it was at the beginning of the experiment.

The result of the experiment as such is a success, for it was not the object of the station to produce a strain of superior layers, but to prove whether this was possible of accomplishment, and the result must be answered in the negative, that simply by selecting the best layers to breed from will not produce an extraordinary laying strain, but if anything, if continued will make matters worse rather than better, so we stand now as we did in the beginning, ready for another experiment that will show conclusively that though selective breeding for eggs has proven a failure, there are still other methods that may be successful.

From our own standpoint it is simply madness for the breeder of fancy poultry to employ any method of forcing for eggs whatever, it is one of the most pernicious methods that could possibly be employed and will only succeed in the production of infertile and weak-germed eggs that in time will entirely lose their reproductive powers.

Commercial pirates has found a large field to exploit in this matter and many are the victims of them, but breeders of standing and reputation have in the past and will in the future, keep away from any such questionable methods of gaining an ephemeral patronage.

Feeding stock birds on highly concentrated food stuff's that has been blended particularly so as to increase egg production is not breeding for eggs, but forcing for eggs, using the trapnest as a means to determine which hen can stand this forcing process the longest before breaking down under it, constitutionally making her entirely worthless as a breeder, which might be pardoned where the only consideration is feeding for eggs, and the selling of the carcass in the end of the process, but no possible stretching of the term could call such work breeding.

(Continued on next page.)

(Continued from Page 135)

Breeding for Eggs Under Present Methods Proved to be a Fallacy

Breeding for eggs includes a good deal more than selection, for if it is a fact, and there is little doubt but it is, that the hen has in her ovarium or egg organ all the eggs she will produce in her lifetime it would be a matter of selecting the one with the most numerous egg cells in her, but we have no method by which we may determine this, and even if we had, it would still be a matter of breeding for strength and vigor rather than for an ovarium of the largest possible size. I have examined a great number of egg organs and in every one have found rudimentary eggs enough to satisfy the most exacting, as far as egg production goes, providing if all of these would be excluded as perfectly formed eggs.

We have examined egg organs from hens several years old, hens than in their time were extra good layers, and still found a plentiful supply of these minute eggs present.

What the utility proultryman is in need of, is information as how to perfect as many as possible of these eggs in a given time, and feed, housing and all the conditions that deals with the birds well-being has more to do with this question of increased egg production at the present time than breeding.

This matter is plainly shown in the breeding of the Pheasant, which in its wild state will lay a nest of eggs, and this nearly always stops production till the folowing breeding season, but under partial domestication where food was provided in plenty and existence not hampered by the search after food, egg production begins early in the season and is much prolonged, as until is the case with the English Pheasant, sixty to seventy-five eggs per year have been produced, not by selection, but by a well selected supply of food material and better shelter during the winter.

Development of the rudimentary egg supply in the hen seems to be the main question, and there is little doubt but that the market poultryman knows how "to force his stock" to its utmost capacity, but this is not a field for the breeder of high class fancy fowl.

* * *

Why the Hens Don't Lay.

By VINCENT M. COUCH.

Feeding for eggs is what most of us are doing, or at least think we are doing. But why is it that some who have good, comfortable houses for their hens, and take great pains in feeding and still don't get eggs until along in January or February? The reason generally is from one or both of these two causes, the hens are too fat or not of the laying kind. It's a very easy matter with hens to get them in an over fat condition, especially those that have not commenced to lay. Pullets that are growing and developing can stand more feed, even if they are apparently fully matured. This fat condition does not seem to stop egg production as with old birds. As soon as a pullet begins to lay, they soon get rid of more or less of their surplus flesh, and in this respect it's the same with a hen. After they once *begin* to lay, they soon get down in normal condition, but the trouble is to get them started after having once reached this over-fat condition.

Now, in regard to some hens not being of the laying kind, I find a great many people who think that all hens of the same breed are alike, that is, if they are Leghorns and well cared for, they will lay in the egg producing season, if they are Brahmas they won't, except a few in the Spring and then desire to set. Others put their faith in almost exactly opposite ways. As far as the number of eggs are concerned, laid by different breeds, our record sshow that there is not very much difference between either variety of Leghorns, Plymouth Rocks, Wyandottes or Rhode Island Reds and Light Brahmas. As I have stated above, it's a question of their being of the laying kind. It depends on whether they were bred to produce eggs or just to stand around and grow fat. It's on the same principle with hens as with dairy cows, only on a smaller scale, and its being on a smaller scale is the main reason why more careful attention is not given to the breeding and selection for this one purpose.

Not until poultrykeepers can see and understand that "like bigets like" with poultry the same as other stock and then go in for the best and nothing but the best, will they be able to have hens that will reach a high point in egg production.

* * *

American Market Duck Culture

(Written Expressly for the American Fancier)

By THEO. F. JAGER

THE time of year to begin and whether to buy breeding stock or eggs for hatching, to produce the future breeders at home, depends all on the man undertaking it, his experience and the season. If the start is going to be made in spring, would suggest that eggs for hatching be purchased and while they are undergoing incubation, plans for brooderhouses, etc., can be made and erected. I know of one case in New Jersey, where a young man, who had only been on a plant for about four months during the hatching and growing season, picking up details while working as a common laborer, started the following spring by buying eggs for hatching and while they were in the machine, that had found a temporary place in the airy house cellar, built his own brooding house, an affair about 120 feet long and of double width, and having finished that, managed to find time between chores and when taking care of the young, to build his own breeding houses and in short, completed the plant gradually, while doing the necessary daily work with the stock. The expense for mechanics was trifling. as he was very handy with tools himself, and his full fledged duck plant, his own handiwork, was completed by fall. The future showed that this young man had built wisely and on the labor-saving plan, and from the small and slow beginning has created a duck business that enables him to raise several thousand head of good sized birds annually, without any outside help.

It pays to always start on a small scale; the essential points that make or mar success can only be learned while doing the work, and a man overburdened with work from the very beginning will not find the time to study birds and their habits or note differences in conditions and results. If the start is contemplated for the fall of the year, a well mated flock bought from a good reliable farm, making market ducks a specialty, would prove best. In taking care of them during the following winter, the feeder is able to study his birds and learn their habits, and be at ease in spring when he can do their caretaking mechanically.

As a rule it does not pay to rely on outside eggs to produce market ducks, although I have known localities where a successful plant was able to do a good business by mainly relying on the eggs to be furnished from season to season by farmers in the neighborhood, who would bring them in to the plant at least twice per week. As the price paid was small considering their hatching value—generally about 30 or 35 cents per dozen—and as the breeding stock kept on different farms had always a free, unlimited run over fields and meadows, great fertility and quick growing easily fattening youngsters rewarded the buyer for his trouble. There is no question in regard to the advisability of small flocks and unlimited grass and water runs, but as we find people having small flocks rarely willing to contract all of their eggs away at a price that barely leaves a margin, cost of keeping considered, the man who is able to buy them all or part. is fortunate, indeed. It is true, the birds will not lay as early as winter forced breeders, nor will they lay as many eggs as a rule, but whatever eggs they do lay from early spring till late summer, can be relied on to turn a paying duckling in four weeks. The old saying, that a duck's first dozen eggs are thin and watery and unfit for hatching and generally unfit for incubation, holds good only if applied to birds that are forced for early winter production. Free run birds that begin to lay in the early part of the natural hatching season, lay as a rule eggs that can be depended on from the very beginning.

We have on our coasts certain sections where the receding tides lay bare large tracts of sands, and the shallow holes there are alive with small fish and sea life of all kinds. Nothing better can be imagined for a flock of breeders. Eggs laid by birds having such a run are red yolked, even the little ducklings are red legged, large eyed and lusty, they are bound to live and fatten quickly. Breaking the egg in a saucer, we find that the white is very thick, like frozen jelly, and the yolk stands up to almost one-third of its own bulk. This is the kind of eggs keepers are anxious to have and to hatch. Beware of the thin and watery egg—the egg that ruptures itself as soon as turned into a saucer. Ducklings from them, if they ever hatch, if they are able to absorb the yolk at all, are bound to break down under the coming heavy feeding. Weak legs, watery eyes, a fast growing bill out of all proportion to the rest of the duck's makeup, and finally a wasting away will be the result. If we desire to avoid getting the blues, if we are anxious to make on the money expended for feed instead of losing it when burying the half-grown youngsters, let us be careful to always look out for vigor, for strength in mating and for suitable care. Yarded birds need more care and food than free run birds, dry land ducks need more care and attention than water ducks; in short, every step that we take away from nature will tell on vitality, and every move we make to aid nature to assert its best, will find an agreeable echo in the shape of profit in our pockets.

I cannot help but cite what Geo. H. Pollard, who once raised 5,000 ducks on two acres of land, said, after he had lost time and money trying to follow the wrong teachings of mistaken leaders in trying to pamper his breeders: "We looked for a farm where we could get running water and grass range for our breeding ducks. We knew our Pekins would not go in the water, for the authorities said so, still we wanted to see what they would do. We found our present location and started our plant by building a house for breeders. The ducks were allowed long yards and swimming pools, were out in all seasons and weather, were given less scraps and were fed outside at all times except when a storm might be too heavy. The house was of the simplest shape and style. The eggs were carried in wagons five miles over rough roads to our home place for hatching. The result was, 'five thousand ducks and eight hundred chickens on two acres of land.'

"Our subsequent experience has taught us the value of water for breeding ducks and the need of careful introduction of fresh blood. To produce strong, healthy ducklings we must have vigorous, hardy breeding ducks that have been selected and fed to that end, and not, as is often the case, merely chosen from a haphazard lot of forced market birds. etc."

* * *

Exhibition Games

Buffalo, July 6, '08.

To the Editor of AMERICAN FANCIER:

Dear Sir: While looking over the news I noticed the list of the different fall fairs to occur this coming fall in New York State. Having exhibited at the State Fair at Syracuse and hoping to show again in the poultry department, at the coming one, I would like to say a few words and ask a few questions concerning the poultry at the fair, and also a few words outside of the fair, concerning Exhibition Games.

Why is it that the different poultry shows do not seem to take the least interest in the Exhibition Games? Do we want them to be taken from the Standard and to become a thing of the past? Why is there no specials offered at the show for Games the same as for the numerous other breeds? We read one or more articles in nearly every issue of the different poultry journals of some fancier telling he has the best general purpose fowl. Has he or has he not? If he did not fancy and take great interest and good care of the ones he is telling about he would have none to tell about. It is the same with all breeds and breeders. It is the same as a parent loving his or her children, each one will say or at least think his or hers is the best—there is no child like theirs. It is the fancier's great liking for his special breed that makes him take the best of care of them, hence his success. But going back to the Games, I do not mean to say a Game fowl is as good a general purpose fowl as a great many of the largebreeds, as their shortness of feather makes it difficult for them to withstand the changing climate which we have to contend with in the State. But as layers I think from my ten years experience that they are just as good as the other kinds; then again their leggy appearance is against them. People will say they are all legs, but pick one of those leggy things up and they will wonder where the weight comes from. Why can't the few breeders of these birds be given a little encouragement at least for their labors? But I am writing too much on that subject and will say a few words about what I saw and heard at the last State Fair. The class in which my birds were shown (the Game class) was the last judged. I was standing near the coops when the judge began his work. He handles the birds a few times with his stick, then turned to me and said, "Which is the best bird, I don't know much about these." Very good for a person who holds a position of judge at a State Fair. He then turned around and said, "I guess this is the best one, give him first." Why can't the State afford to hire a man to judge who would know at least a few of the standard requirements of an Exhibition Game? I do not mean a special judge, for if they had one for one variety they should have one for each and that would not pay. But why could not the man who judges the Game Bantams also judge the large Games? He would at least make the exhibitor feel that his birds have at least been judged, not "guessed at." While at the fair I also noticed that the catalogues were out and freely distributed the first day of the fair, and also the judge had one while judging the birds, his being different from the regular ones. It having a blank sheet between each printed page. All the judge had to do was to check off the winner opposite the exhibitor's name. Why do they do it that way. Why at the small county fairs the judging is done in a more proper and business-like manner, or is it customary to judge the exhibitor instead of the exhibit at the State Fair?

If you think this article is of enough interest to the FANCIER's readers I would like to have it published and would also like to hear what some interested and unprejudiced reader has to say on the subject.

Respectfully yours,

T. C. H. HOFFMANN.

Remarkable Hens.

Some months ago a Swiss village in the Argau canton commemorated with much ale-swilling and other popular forms of jubiliation the prowess of a village hen which had laid its thousandth egg. A similar celebration is to be given at Kollshenn, in Alsace, within a few days (says the *Globe*), to celebrate and incidentally advertise the "laying" qualities of native Alsatian poultry. One of the villagers had a redoubtable hen to which his affectionate pride had given the name of "Olga." "Olga" was a remarkable fowl. Hatched on March 21, 1898, she laid her first egg on August 22 in the same year, and from this excellent beginning went steadily forward until, after scoring 989, she was found dead on her nest in the struggle to complete the ninety. The pathos of the case has appealed to the Alsatian Ornithological Society, and "Olga," her meritorious life and exemplary end, are to be drunk and sung in story throughout the province.

TIME OF INCUBATION.

Common hen	21 days
Pheasant	25 days
Duck, common	28 days
Peafowl	28 days

* * *

Condiments, egg food, and condition powders are not intended for healthy fowls, but as medicine for those out of condition. They should be used with caution, and by judicous use may be of great service. They are not likely to be needed if the birds are given proper care.

* * *

Keep the house as clean as possible at all seasons, but especially in hot weather, as the more manure there is in a house the faster the lice seem to breed.

Poultry as a Hobby

The universality of hobbies is a striking fact. Every man has one. This argues the need of them. Man, as he is constituted, must have a hobby—something that will yield to him pleasure in its pursuit. Were it not so, this universality would not exist. There is a wide difference in hobbies which are open to a man's selection, but it is essential that his choice shall rest upon one suited to his circumstances.

The poor man cannot become a collector of rare books. Only the millionaire can surround himself with valuable works of art.

A hobby should be an object or pursuit which will afford recreation and refreshment to the mind, thus better fitting it for the discharge of the daily duties of life, and at the same time be within the means of the man who desires it.

For the majority of men the hobby must not be expensive. Their means will not permit it. To these men, needing as much, nay, more, than the millionaire, some hobby to sweeten life, some delight to banish weariness and forget toil, the breeding of fancy poultry makes a strong claim.

It is inexpensive. A few dollars will procure a sitting or two of eggs or a trio of fowls. A cheap coop, with a wire run, is equally inexpensive, and the hobby is his. The original outlay is slight, and then the expense ceases. The hobby will pay its way. Unlike many other hobbies, to indulge in which require a large original outlay and constant and increasing expenditures, poultry breeding is within the reach of the humblest wage-earner. Anybody can afford to keep fowls. Where mongrels will live and do fairly well, fancy poultry will thrive, and will make better returns than nondescripts for the care bestowed upon them.

It is a recreation to the mind. The care of fowls, the observation of their ways from chickenhood to maturity, from the time they chip to shell until the pullets begin to "shell out" themselves, is a constant source of wonder and delight. One never tires of watching the pert motions ot the animated balls of down called chickens. In the presence of such sights and in the hearing of such sounds as the poultry yard affords, the cobwebs of care which the spider of business has spun over the brain are brushed away, and the mind is restored to its normal working condition.

It is healthful. The care of fowls leads the man confined to his shop, store or office for the greater part of the day, out into the open air, fills his lungs with oxygen, and properly aerates and sets in motion the currents of his stagnating blood.

It is a mental stimulant. The mind of the man behind the counter is apt to go "shoppy." Trade or business leaves as distinct an impress upon his mind as it does upon his hands. His thoughts run in the narrow grooves of his daily occupation, and he cannot get out of them. He is in the ruts of life, and must remain there unless he can mount his hobby horse and gallop away from them.

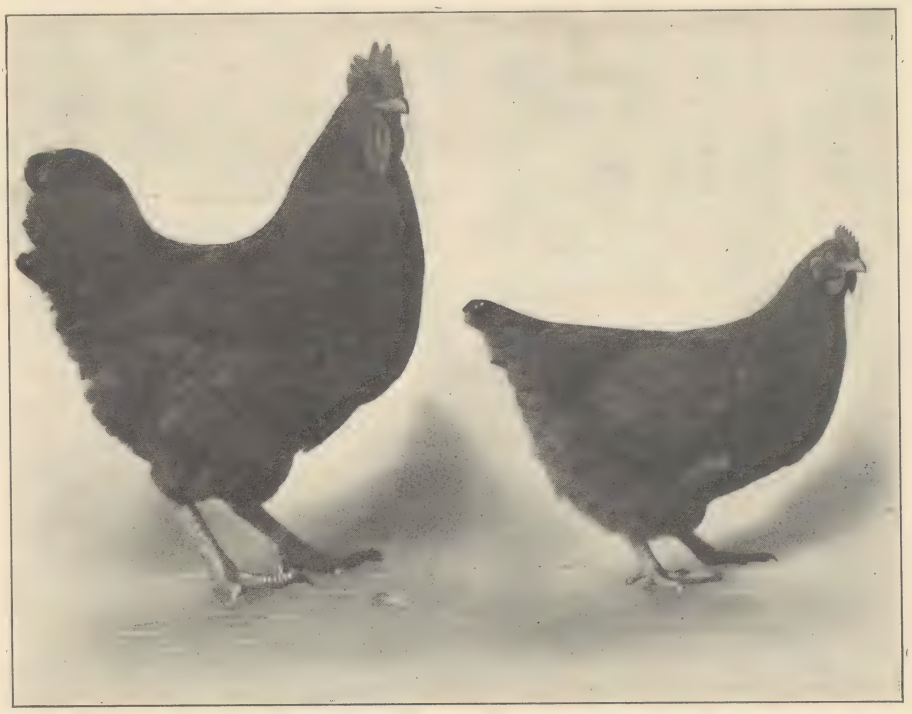
Once in the saddle, and he feels the fresh air on his cheek, he sees the green turf beneath his feet, and, with the blood coursing freely through his veins, he feels himself a new man.

Poultry breeding, when carried on for the production of fancy points, by calling for close discrimination in the selection of the breeding stock and skill in the mating of the sexes for the production of young better than either of their parents, furnishes just the needed excitant to the mind to lift it out of its customary ruts and awaken new trains of thought.

It is of universal adaptability. It is the hobby of all classes of men. In it they have found, do find, and will continue to find, pleasure and delight, so long as human nature and its needs remain what they are. To the man who has tried it, no exhortation is needed to continue it. To the man who has not, we advise one season's trial. The result of it will be the best possible argument in its favor. If he does not like it, then let him abandon it for some more congenial pursuit. If he does, just one word of caution is necessary—let him not ride it too hard, or his wife will have no space for her flower beds.

This, then, is the hobby we advocate, because it is inexpensive, because it is a recreation of the mind, because it is healthful, because it is a mental stimulant, and because it is practical—a hobby, which, reasonably pursued, will add largely to the sum total of human happiness.

Why is it some persons are prone to jest about anybody who is engaged in rearing poultry or pets, we cannot imagine, for surely the business does not elevate or degrade the person, but the person elevates or degrades the business just so far as he or she may use good or bad means in furtherance of their designs and desires. As far as the mere business is concerned, a peddler is no worse that the merchant from whom he buys his wares, only one is a vender by retail, while the other sells in quantity. So it is in the matter of breeding standard bred stock. A poultry fancier who, by a due exercise of brains, energy, perseverance and experience, succeeds in raising choice fowls, is to be as heartily congratulated as he who raises fine horses, cattle or sheep by the exercise of the same faculties. To raise fine poultry and understand it thoroughly demands more skill than raising cattle or sheep. That is all!



Not only is there a vast amount of money invested in the breeding of fancy poultry in this country, but in the ranks of the poultry fancy can be found some of the best minds of our land. These fanceirs or breeders, if you please, show by their continued success each year, in solid cash, too, that brain work has been and is appreciated. These cavillers are a hindrance to the community in which they live, though they would have us consider that no occupation but theirs is "high-toned." In such pretenders it is evident that hollowness, sham and deceit still has sway in the world.

Within the narrow confines of a single poultry-house can be found plenty of food for reflection and study. No matter what breed is contained therein, no matter how humble may be the building or enclosure, there will be the enough to interest those who are lovers of natural history, and to fill up the mornings and evenings of leisure of the business man. You can study the peculiarities and markings of the breed you have chosen; you can experiment on the breeding possibilties; you can find out what feed is best suited to theis needs, ad adapted to produce certain desired results; you can soon learn the value of foods when fed in different forms and under varying conditions; you can strive to give comfort to your charges, and secure it wtih a moderate outlay of time, labor and cash. In very many ways you can benefit yourself by adding to the health and thrift of your self-supporting pets.

To the man of business, who comes home in the evening, tired out with the trials and annoyances of the day, wishing relaxation and forgetfulness for the time being, we commend a few fowls, which require but little room. If they do not furnish the enjoyment and relaxation desired, then we are satisfied that the owner is thoroughly calloused and hardened by business, as are too many workers in these days of sharp competition and trade.

* * *

"Doubtful things are mighty uncertain." So are the average summer supply of eggs at the stores. Often one gets poultry when they pay for eggs only, and often theatre or bad lecture eggs when they pay for fresh ones. In summer in cities it is usual to have scrambled eggs in style.

RHODE ISLAND RED COCK
Owned by C. and H. P. Wadsworth, Ridgewood, N. J.

That there is a choice in incubators and brooders we do not deny. It depends largely on the operator. Once the latter becomes convinced that one particular make of machine is capable of doing his work satisfactorily, he will not change for any other make. We know of one old breeder of fine fowls who has had in successful use for the past twelve years a number of incubators of a well-known make. All the improvemnts made on this machine would not induce him to part with his favorites. He believes in letting well enough alone.

Still, there are many good chicken raisers that like a change and whenever something new and tempting is offered in the incubator and brooder line, out go the old and in come the new. It makes business lively for the incubator manufacturers, and competition being rather warm, the race to land a good order is often a hard and exciting one. The rivalry is as great among incubator as among typewriter manufacturers. Fortunately there is not the amount of "knocking" indulged in among the former as there exists with the latter. Occasionally some of he artificial hen crowd get their little hammers out and also harpoon their competitors now and then, but the game is not very profitable. Blowing, knocking and lying do not pay in the long run, especially when such is done in order to injure a competitor. A good salesman extols the merits of his own goods without decrying those of his competitors.

* * *

Call up your flock and give them some feed. Watch closely, now, and see if you can tell why that cock picks up the feed, and distributes it so gallantly to several of the hens—perhaps the larger share of them, and why he so cruelly pecks some of the other hens when they venture near him to pick a morsel. Why is it so, it seems impossible to find out, but let us say, in a general way, it is his partiality for some or his aversion to others, which is something like the darkey's definition of "because." He says, "My fren's, de resun why we say because is, because 'tis because, an' dat is de reason 'tis because!"

* * *

Rake off the lawn mowings every time the grass is cut, and shower the short, juicy blades over the floors or ground of your pens, where the poultry may be confined. This is a splendid way to dispose of the debris, and every morsel will be eagerly devoured by the chickens. For one kind of "green food," there is nothing so palatable or so satisfying—as far as it goes—as this is; and in no other way can fresh grass be so well fed to poultry. The fresh cutting is crisp, tender, nourishing and highly nutritious, too.

DURING JUNE, JULY AND AUGUST EGGS REDUCED ONE-HALF

BIG BARGAINS IN BREEDERS

F. J. BRADFORD, TROY, PA.

A Few Points on How to Breed and Manage the Game Fowl.

By E. W. Reichert, Archbold, Ohio.

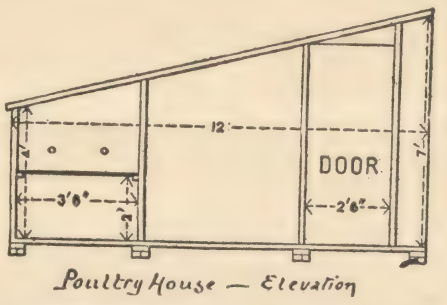
Many of the game breeders make their first mistake in the mating season. They will probably have some hens running around with a very poor male and then about two weeks before they want to save the eggs they will place a good cock or cockerel in the pen, and after the young birds are hatched will no doubt think the head of the pen was a poor bird.

To make a success in game breeding one should mate their birds about two months before they commence to save the eggs and then make a correct mating and do not neglect to have your male bird one of the best that you can procure. Now to get a good pit game for fighting take a war horse hen and an Irish gray cockerel or a Cuban red pullet and an Irish cock and you will get as good young stock as can be had. Of course they will not all be the same color. Some of them are almost black and some of them a real dark gray. Most of them resemble the cock bird. As to the laying qualities I find the Irish gray the best. I know of plenty that will lay five days out of the week and when considering it is a game I believe it is very good. Most of them will just lay every other day.

The best way to set Game eggs, is in the Spring of the year, say about the ending of March, or better yet wait until April or May or the early part of June and then let them find their own nest, and they will lay first about enough eggs for a good setting and then they will hatch them and you will be surprised how good they will hatch, in most instances hatching every egg, and when one considers the disposition of the Game bird he will readily see why it is better to have them find their own nest as the wild bird. When they start to set, by all means never disturb them. You cannot help them. After the eggs hatch do not feed them too much meat or none at all, for meat will make them very vicious and before they are two month's old will commence to kill one another.

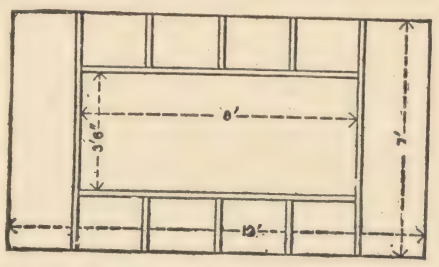
In breaking in a cock bird to fight never let him, as a young bird, meet his master, but always see that it will be easy for him to get the better of the other bird and in a short time he will gain much confidence.

Although I do not raise my birds for fighting, I give these few pointers as I have made a study and believe I understand the nature of the bird very well. The game bird is a peculiar bird and one has to understand the nature, otherwise the breeder will be unsuccessful.



Vermin in the Poultry House

Vermin upon the woodwork of the fowl-house—walls, perches, nest boxes etc.—are best killed by the application of whitewash, which not only destroys these pests, but at the same time leaves the premises light, sweet and clean. Carbolic acid is sometimes combined with whitewash, in the proportion of three ounces to as many gallons of water. Whitewash, pure and simple, is, however, amply sufficient. Sometimes we hear that it must be applied hot, but this is not necessary, either. Apply it profusely, and leave no nook or cranny untouched; that is the main thing.



If possible, set duck eggs under hens, as they make better mothers and will find food for the ducklings—something a duck will not do. After the hen has set four weeks the duckling will appear. Perhaps it will be necessary to help some of them from the shell, as they are not as lively as chickens, and sometimes are unable to get out alone. It must be kept in mind, however, that if we raise ducklings for future breeding stock it will not answer so well to use hens to brood them as to let the old ducks rear their young, since if hens be generally used, the drakes will subsequently be found a great nuisance in the poultry yard. Novices in duck raising should bear this in mind, and save themselves much trouble, if they keep other poultry.

Poultry House

The accompanying illustrations show a poultry house built by an experienced poultry keeper of Marion county, Ill. He describes this in Am. Agriculturist as 48 feet long and 12 feet wide, 4 feet high in rear and 7 feet in front. It is divided in four compartments, each 12 feet long. The lower figure gives the front side of one of these compartments. It contains a window 8x3½ feet, covered with 1-inch mesh wire netting and a sash covered with cotton cloth. The sash has two cross bars to stiffen it. It hardly should be necessary to say that the house is made tight and snug by the free use of good lumber and tar paper. Particular pains is taken with the roosting closet in the rear. The illustration shows that this closet is, or can easily be made, very snug and warm. In very severe weather a curtain of cotton cloth or gunny sacking may be hung from the purline to the floor of the roosting closet, and the hens will be cozy and warm. The advantages of this closet are a warm roosting place with an abundance of air without wind or draughts, and the whole floor space of the building being available for a scratching room.

Poultry House — Elevation

Front Side of one Compartment.

* * *

Feed only as much as the birds will eat.

Ducks are comparatively free from disease.

Always have sand or grit within their reach.

There is profit in ducks; why not raise them?

Running water is not necessary for the raising of ducks.

It is bad for the ducklings to get their backs wet in a storm.

Ducklings, like turkeys, seldom recover from the effect of a chill.

Ducks must be supplied with good, warm, dry quarters at night.

Geese are long lived and retain their laying and hatching qualities through life.

When ducks are confined see that they are supplied with plenty of green and soft food.

Be careful that the drinking water is tepid, not cold, or they are liable to have cramps.

Feed mainly meat, vegetables and grasses, with a small ration of grain, in the middle of the day.

* * *

Oats fed now is excellent as a change from the corn and wheat of the winter months.

During the moulting period a small amount of tincture of iron should be used as a tonic.

To dry-pick fowls it is necessary that the feathers be taken out while the fowl is still warm.

Occasionally put in the drinking water a few drops of carbolic acid as a safeguard against disease.

A pound of linseed meal fed to fifty hens twice a week will promote egg production and health, but if given more frequently is apt to cause bowel disease.

The observing farmer is the one who makes rapid strides in progress. To him mistakes are object lessons. Failures do not discourage, but often open the way for investigation that leads directly to real success.

THE picture on the title page of this issue represents a pair of White Laced Red Cornish owned by Geo. W. Webb of Rochester, N. Y. During the past few years this fowl has gained considerable recognition among the poultry men, both as a high class exhibition bird and a utility fowl. A year or so ago they were called Buff Laced Indians, but of late the name has been changed to that of White Laced Red Cornish. In regards to this variety, Mr. Webb writes: "White Laced Red Cornish was formerly known as Buff Laced Indian Games. The Cornish Club decided, however, to drop the name Indian Game and call them the Cornish fowl. There are three varieties, the Dark Penciled, the White, and last, but not least, the White Laced Red. A fair idea of the proper markings of this beautiful fowl may be realized more fully by comparing them with the Buff Laced Polish. The only difference is that the center of the Cornish is a rich, brilliant red instead of Buff White. With this white lacing it makes a beautiful contrast and can truly be called a creature of feathers and flesh. The honor of producing this twentieth century fowl belongs to W. H. Card. At the Springfield Show 1904, I persuaded Mr. Card to part with a few birds. Since then I have exerted myself to the utmost in their behalf and think the result justifies the money and labor expended. The male bird in the illustration is the sire of the 1st hen at Boston last year. As both pictures are photographed from life, the lover of the Cornish fowl will not be slow to appreciate the value of the latest addition to the family of the table fowl and egg makers. As a laying variety they are equal to Leghorns, besides being good mothers and very easy to break away when brooding. The prospect appears very bright for the future of this fowl as the demand at present far exceeds the supply. If one is looking for a fowl for general purposes where beauty and utility are combined, they should not overlook the White Laced Red Cornish.

* * *

The article, "Breeding for Eggs Under Present Methods Proven to be a Fallacy," appearing on another page of this issue is worthy of careful thought. The writer, Rev. C. E. Peterson, has given startling facts regarding this important subject and his statements will be believed by many as some of the most important revelations of the present time poultry culture.

The Maine State Experiment Station for about nine years has been investigating the results of breeding for egg production, and the tabulated statements made in their Bulletin proves that the flock is no better than when they started and that the trend in egg production is downward, giving absolute proof that their method of selection of the best layers for breeding is faulty in producing a superior laying strain. This subject will undoubtedly create lengthy discussion, not only in the United States, but in foreign countries, and it should, because it is of immense importance.

Many will undoubtedly be enlightened after reading in Rev. C. E. Peterson's article the following:

"Feeding stock-birds on highly concentrated food stuffs that have been blended particularly so as to increase egg production is not breeding for eggs but forcing for eggs, using the trap-nest as a means to determine which hen can stand this forcing process the longest before breaking down under it constitutionally, making her entirely worthless as a breeder, which might be pardoned where the only consideration is feeding for eggs, and the selling of the carcass in the end of the process, but no possible stretching of the term could call such work breeding."

The method used for breeding for egg production has, according to the Rev. C. E. Peterson and the last Bulletin, proven to be unsuccessful, although during the past nine years many had accepted it in breeding for a superior strain of layers.

At the risk of being somewhat reiterative we herewith re-publish an editorial article appearing in the May 15th issue of the American Fancier.

"From time to time we hear of many new theories, bu we would like to hear that these new theories have been tried and proven. A theory is of no value until it has become an established fact. We hope our readers will think this matter over carefully and take up some new theory that they believe in and work at it until they have proved it to be a success. Or in a case where they doubt the correctness of a certain theory, work at it until they have positively disapproved the existing theory."

"A Square Deal" at the Allentown Fair Poultry Show

The Allentown Fair Poultry Show has been run for several years past on the basis of a strictly square and equal deal to all exhibitors and this year adopts the plan as its motto.

Poultry fanciers everywhere can depend upon it too that as long as the present management continues the motto phase shall not here be mere empty words.

As a result of not a little wish and effort in the past of the local fanciers, the Fair management now offers poultry and pigeon fanciers what is probably the finest exclusive poultry show hall in America. A $4 first and $2 second prize, on a $1 entry, and only two to fill. And something like eight of the best judges the country affords.

The building has aisles fifteen feet wide, all cement floors and all new Empire cooping, with light and air equal to outdoors. In addition to the most exceedingly liberal prize money ($10 first on exhibition pens), they offer in each class five ribbons—the best money can buy. There are also 100 Fair Special ribbons of best quality. With two only to fill; in most of the less popular varieties a fancier can fill his own classes, pay his expenses and still have money enough left to make it worth while.

In selecting the judges, men only were considered of undoubted ability and popularity, and with this the money Allentown is spending yearly to advertise its show, a win at Allentown is going to mean *reputation.*

The "square deal" plan at Allentown Fair Poultry Show means an equal chance for all and a fall show event that in every way will measure up to the biggest and best of the winter shows. See adv. in another column, but better yet, send for a premium list.

* * *

W. G. Hale of Batsto, N. J., is mailing a small booklet which describes his pens, also gives list of matings for 1908. All interested in either the White or Buff Wyandotte should write Mr. Hale for his list.

* * *

Chicago Show.

A reorganization of the management of the National Fanciers' and Breeders' Association, the promoters of the Chicago show enterprise, has been effected. Mr. E. J. W. Dietz, of Downers Grove, Ill., has been elected president. Mr. Dietz is well known as a successful fancier and breeder of exhibition games, game bantams and Rhode Island reds. He is also a well-known writer upon poultry topics. Mr. Frank B. White, of Oak Park, Ill., is the new vice president. Mr. White is the president of White's Class Advertising Co., and well and favorably known in advertising circles. Mr. K. J. Muir of Chicago, is the new treasurer. Mr. Muir is a breeder and fancier of pigeons and black African bantams. He is an expert pigeon judge and is well and favorably known by the fanciers of the country.

The standing committees for the year are Messrs. Wagner, White and Draper, finance; White, Muir and Wagner, judges and specialty clubs; Messrs. Muir, Kimmey and Schureman, premiums; Messrs. Kimmey, Burdette and White, concessions; Messrs. Draper, Burdette, White and Rigg, advertising and printing; and Messrs. Burdette, Draper and Pratt, admissions and tickets. Mr. Kimmey will be the superintendent of poultry and Mr. Muir, superintendent of pigeons. The show will be held in Chicago, January 25 to 30, both inclusive, 1909.

FRED L. KIMMEY,
Secretary.

Morgan Park, Ill.

George Ewald and E. B. Ulrich have been selected to judge the pigeon classes at the coming Baltimore, Md., show

Both gentlemen are well known to the pigeon fancy and should be the means of bringing out a big entry.

* * *

W. H. Shipman who a few years back showed some grand Nuns has tried to bring the Nun breeders together and form a club. Mr. Washburn has also been working for a club, but their endeavors have met with little success so far.

Mr. Shipman mailed a number of letters to Nun breeders throughout the United States and Canada and reported that just one fancier had the courtesy to answer.

The pigeon fancy is now in the hands of those who only want to be heard from during one or probably two exhibitions.

There are about half-dozen fanciers who are really striving to advance their hobby by letting others know their ideas, and whether right or wrong it certainly puts life in the variety.

A few weeks ago we came across a gentleman who had decided to breed a few fancy pigeons, and after deciding on the variety he desired to keep, wrote a certain breeder for prices, etc., of his stock. After a delay of two weeks the answer came, stating he had no stock for sale at the prices named. The funny part was that in the letter no prices were mentioned.

* * *

The premium list of the New York State Fair, to be held at Syracuse, N. Y., September 14-19, 1908, entries closing Saturday, August 15th, has made its appearance.

Pigeons are allowed 284 classes. Cocks and hens in most classes compete separately. The prize money is $1.00 first and 50c second.

* * *

September 22d-25th, 1908, are the dates claimed by the Allentown, Pa. Fair Association. The pigeon section has always been one of the main attractions and this year will be no exception. The officers of the association have been most liberal in their regular premium money, also the list of specials in competition in the pigeon department.

We know of no better place for pigeon fanciers to exhibit than at a first class fair when run in an up-to-date manner. We hope all that possibly can will make an entry and do their part in keeping the pigeon section at Allentown alive.

* * *

At the coming Crystal Palace show, held in England, the following gentlemen and their classes have been selected: Messrs. MacSymon and Leith, (Pouters), Howard and Coward (Pigmies), Coward (Croppers), House and Crawford (Fantails), Richardson (Barbs), Hill and Barnet (Jacobins), Cooler and Fletcher (Dragoons), Houghton and Grant (Turbits), F. T. Wiltshire (Archangels), Allsop (London Beards), W. B. Powell (Antwerps), H. F. Fox (Exhibition Fliers), J. Billington (Flying Homers), T. R. Wheeler (Tipplers).

* * *

In a recent issue of the *Feathered World* a writer asks if Pouters bred in America, wearing the National Pouter Association bands would be eligible to compete at the Crystal Palace.

The answer refers the writer to either Pigeon Club, Marking Conference, Pouter Club or International Show authorities.

By the above notice it leads one to imagine that some one of the Pouter breeders intends to exhibit at the coming Palace Show.

Let us therefore trust Madison Square Garden, Boston, etc., will have a better exhibit of these once popular birds at the coming exhibitions.

* * *

We often see a pigeon fancier with the emblem of his favorite variety arranged as a watch charm, stick pin or button, but to have a reproduction of a pigeon on one's check is unique to say the least and belongs to Mr. A. E. Robst. The "Helmet King," shall I call him, is so enthused over his variety that the reproduction of one of his winners appears on the face of his check.

* * *

In another column of this issue we publish a notice from Mr. Whitney, Secretary of the American Pigeon Club. The fact that the club is incorporated should be the means of obtaining many new members. During the past few years we have heard many make the statement that "if the club was incorporated they would become a member."

There are many advantages to be gained by joining the club, as can be seen by reading the objects of the association, and trust those that have held out so far will see the advisibility of their joining.

The officers of the club have worked hard during the past season and have had many perplexing questions to settle. The band matter has been thoroughly gone over and next season will probably see a different state of affairs, as experience is the best teacher and that the club has certainly had.

* * *

The American Pigeon Club Incorporated

I am extremely pleased to be able to announce to your readers that the American Pigeon Club is now an incorporated body. The deed was accomplished on the twenty-sixth day of May in Trenton, N. J. Right here we will insert the matter contained in the document.

Certificate of Incorporation of the American Pigeon Club.

This is to certify that the undersigned do hereby associate themselves into a corporation, under and by virtue of the provisions of an act of the Legislature of the State of New Jersey, entitled, "An act to incorporate associations not for pecuniary profit," approved April twenty-first, eighteen hundred and ninety-eight, and the several supplements thereto and acts amendatory thereof.

First. The name of this corporation is American Pigeon Club.

Second. The purposes for which this corporation is formed are the promotion of the breeding and exhibiting of pigeons; the suppression of fraud, cruelty and dishonorable practice in relation to pigeons; and the advancement and protection of the interests of pigeon breeders and exhibitors in general.

Third. The location of the principal office of this corporation is at No. 211 Market Street, in the City of Camden, New Jersey.

The name of the agent therein and in charge thereof, upon whom process may be served is Harry C. Kramer.

Fourth. The number of trustees of this corporation is four.

Fifth. The names of the trustees selected for the first year of the existence of this corporation are: Woodford E. Shreve, Westville, N. J.; Edith L. Shreve, Westville, N. J.; Frank H. Ray, Magnolia, N. J.; Rudolph Sweisfurth, Philadelphia, Pa.; William Ehinger, Philadelphia, Pa.

This covers the interesting part of the papers, the rest being the signatures and red tape through which all this kind of papers have to pass.

I think you will all appreciate the boost this change will give the club, for it changes it from a mutual partnership affair to a corporation. It makes it possible for the many who were afraid to become active in the club under the old form, to come in under the new, for the possibility of individual suits for the acts of the officers is now cut out, the corporation being the party which is now liable.

To those of you, who for reasons of your own, are unacquainted with the reasons for forming the Pigeon Club, the "second" above will be quite to the point, for it gives the whole reason for the existence of the club. Read it carefully and digest every point, and then if you can say that you do not see the usefulness of the club, I think you can write yourself down as either very thick in that you cannot see the point, or very narrow in that having seen the point, you do not recognize its usefulness. The provisions there set down are not many in number, but they are all embracing in their scope for they cover the life of the birds from the cradle to the grave, through the band regulation and show regulation.

You hear a great deal about bands at all times and under all conditions and it might be well to consider what place the bands have in the existence of the club and in the fancy in general. The first and last, and practically only use of the bands is a guarantee of the age of the bird, showing the true age not only for show use, but for buying and selling. The true age of a bird is a very valuable point in this last case, or what do you want to know more than the true age of the bird. I did intend to go on for some length on this line, but I find that I have quite a bit of other stuff to put in, so I will call it off for now.

I will here put in the list of officers elected and now filed with the authorities at Trenton, N. J.

President, W. A. Gibson, Jackson, Mich.; First Vice-President, A. E. Robst, Rutherford, N. J.; Second Vice-President, H. A. Verges, Milwaukee, Wis.; Secretary-Treasurer, Richard Whitney, Dorchester Centre, Mass., Directors for Three Years, H. V. Crawford, Montclair, N. J.; K. J. Muir, Chicago, Ill.; F. W. Gorse, Needham Heights, Mass.; Directors for Two Years, A. D. Robinson, Sioux City, Iowa; F. H. Wright, Boston, Mass.; E. B. Ulrich, Reading, Pa. Directors for One Year, C. J. Asman, Detroit, Mich.; C. F. Wagner, Toronto, Canada; R. Sweisfurth, Philadelphia, Pa.

The above officers take office on the first of next September, the Board of Directors succeeding our present Band Committee and Protest Committee and having more power than both combined.

RICHARD WHITNEY,
Secretary American Pigeon Club.

* * *

This is an age of progress, but the poultry business is in the van.

* * *

Keep a strict account of everything, and you will learn that standard-bred stock raising pays.

* * *

Never breed from a weak bird. Not a little of the good success of many breeders has come from observing this admonition. Then there is another injunction: Don't breed from immature pullets!

* * *

Patient Man and Egg.

If one were asked to name the most patient man on earth, the reply would probably be—Paul Cinquevali. The famous feat of throwing up a hen's egg and catching it on a plate without breaking it necessitated nine years of constant practice.

* * *

All kinds of poultry delight in working over newly ploughed ground for insects, says Epitomist. The number of insects destroyed in one day by a large flock of fowls cannot be estimated, but it is certain that each bird will fill its crop several times during the day and will also keep busily at work until night. The turkey and the guinea will forage over a wide territory when on a grass plot and destroy thousands of noxious insects.

Don't let the summer hen's nests become a vermin breeding place. Frequently replenish the nesting material, burning the old. Wash nest with coal oil or white wash, in which there is carbolic acid. Use insect powders or lice killers freely.

Scientists now declare there is a "laziness germ." Just imagine how terribly infested some people must be with it. Animals seem to be troubled with it in warm weather too. The festive setting hen must occasionally be troubled with this germ too.

Whether dry-feeding methods are best or not, the agitation of the subject has been beneficial. It has caused mashes or mixed foods to be more carefully made up. Sloppy, wet food is not the thing for either fowls or chicks. The man who mixes his mashed foods so that they are of crumbly consistency can satisfactorily compete with dry-feeding methods.

Much of the troubles in some flocks in summer is directly due to improper water supply. Plenty of water is given, but too much at a time, and it is allowed to become sickly hot in the sun. When fowls want a drink, hot water does not satisfy the thirst any more than it would a human being.

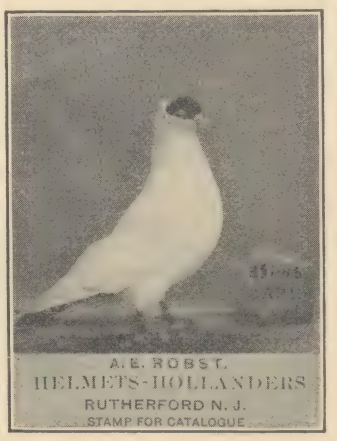
* * *

To raise Bantams successfully, they must be kept dry and not allowed to run much for a couple of weeks, and never while the dew is on the grass. A strip of inch-mesh wire around the coop when first given their liberty will check their rambles. When first taken from the nest supply with grit and water before any food is given them. Lice is fatal. The object of this careful attention is to start them vigorously. Once they are feathered their growth can be checked and size reduced, but breeders have realized the uselessness of breeding weak stock with the idea of raising young that will live, and are not paying so much attention to size.

* * *

At this time of the year care should be given that lice does not gain headway in the loft. If these pests once obtain a foothold they increase in numbers with alarming rapidity.

They creep in the feathers on the neck and other places which birds cannot reach with their beaks and deposit an enormous number of eggs.



As these hatch the insects creep down to the under parts of the body for sustenance, and the process is repeated until the pigeon is infested with them, and render the lives of the poor birds a perfect misery.

A good insect powder is excellent for getting rid of these insects. Dust the bird thoroughly, rubbing the powder well in the feathers. This process should be repeated frequently.

* * *

Grit is one of the most important things in the pigeon loft, and it is also one of the most neglected. It is quite impossible for pigeons to thrive long without it, and this is one of the chief reasons why people do not have the success in rearing birds.

It must be remembered that pigeons don't masticate their food and it is very essential that grit should be before the birds at all times.

CLASSIFIED ADS

CLASSIFIED 50 words or less, 1 time 50 cents. 12 consecutive times (6 mos.) $5.00. 24 consecutive times (1 year) $8.00; additional words 1 cent each per issue. Numbers and initials count as words.

TERMS CASH WITH ORDER.

Keep the Rain Out

A good roof on the hen-house is necessary to the health and prosperity of the hens. A leaky roof makes the house damp, cold and clammy, and cuts short the egg crop. No matter how much feed you give your hens they'll not do their best unless kept dry, snug and warm. "Star Felt Roofing—the kind that lasts and keeps the rain out—costs but little, you lay it yourself, and then your hens lay better for you. Made in 1, 2 and 3 ply sizes. Write for catalog and prices today.

YOU NEED OUR

Profit-Making Poultry Books

POULTRY MANUAL

A Complete Guide to Success.

Contains 168 pages, illustrated; everything the fancier and exhibitor want to know about the leading standard breeds, breeding show winners, etc. (written and illustrated; by F. L. Sewell, world's greatest poultry artist); utility points of the standard breeds; value of different grains for feeding poultry; best methods of feeding; how to make farm poultry pay, prevent and cure diseases etc. **Price, 25 cents, postpaid.**

EGG MONEY

How to Increase It.

Contains 128 pages, completely illustrated; thoroughly covers the profitable production of market eggs, including: breeding, rearing, housing and feeding layers, to get eggs when the price is high; marketing to obtain better prices; the 200-egg hen; preserving eggs to keep fresh till the price goes up; descriptions of successful egg farms and the methods of conducting them, etc. **Price, 25 cents, postpaid.**

CHICKS

Hatching and Rearing.

A book of 128 pages, illustrated. It tells how to build a satisfactory, inexpensive incubator house; hatch and rear with incubators and brooders and with hens; explains up-to-date care of the growing stock; developing, fattening and marketing; the broiler business; the profitable "soft roaster" industry, etc. This book will save its cost in the growth of one chick. **Price, 25 cents, postpaid.**

POULTRY HOUSES

Coops And Equipment.

This book contains 100 pages, 93 illustrations and over 50 complete plans; it explains how to build the best and cheapest large and small houses (for all climates), roosting and brood coops, all fixtures and utensils; how to make the best foundations, floors, walls, roofs, nest ventilators, show coops, shipping coops, drinking fountains, etc. **Price, 25 cents, postpaid.**

Send 25 cents and any book you select will be sent you by return mail. Address all orders to

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

President American Houdan Club, From 1900 to 1907.

VOL. XXXVIII NEW YORK CITY, AUGUST 15, 1908. No. 709

AMERICAN POULTRY ASSOCIATION CONVENTION

NIAGARA FALLS. AUGUST, 10th, 11th and 12th, 1908

By W. THEO. WITTMAN

Official Report of the Meeting will be Published in the September 1st Issue.

THE attendance was about 100, or just about the number that was on hand at last year's convention.

Was called to order promptly at 9.30 A. M. Monday by President C. M. Bryant in the chair.

All the officers, with the exception of Second Vice-President Purvis, and all nine members of the Executive Board on hand.

Something over 300 new members voted in and a charter granted Kansas State Branch at this session. With members voted in at New York last winter and at later sessions of this convention, the total number of new members for the year comes close to a total of 500.

Report of Sec.-Treas. showed an income for past year of something like $8,600, and an outgo of $8,400. With the emergency fund, or the money on interest in bank, of $7,500 of the same total of a year ago.

Finance Committee report embodied recommendations that rather trend to tie up the hands of the Sec.-Treas. in the disbursement of the funds of the Association.

Reports from various branch associations developed that there was a strong feeling in one or two of them; that unless the parent body devised a more liberal policy or came to the aid financially of said Association there was a danger that they might fall by the way.

Report of chairman of Committee on Bureau of Lecturers showed that forty-five had signified their willingness to do work along this line; names and addresses of these, with their subjects, were read.

Paper by Mr. Grant, M. Curtis, on Revisions of the Standard of Perfection and Publication of Separate Breed Standards was very full and lengthy, but was listened to throughout with marked attention and interest. It was chock-full of historical facts, tracing the history of the American Poultry Association and its standards from the very beginning. Mr. Curtis had on exhibition his most complete collection of old Standards, also some beautiful sets of prints illustrating the latest progress in the art of color printing.

Paper by Mr. J. H. Robinson on How Best to Promote the American Poultry Association was also listened to most carefully and with seeming much approval. Mr. Robinson strongly advanced the idea that the Association's Secretary should make himself thoroughly acquainted by personal visits to every poultryman and poultry section of the country and be on hand to give aid and encouragement wherever neeeded.

Of the proposed amendments to the constitution and by-laws, the first two were promptly rejected without discussion; both of which had previously been condemned by the American Fancier. The second amendment is the one in reference to the American Poultry Association shows engaging the services of only such judges as are licensed by the American Poultry Association, and it is one that the editor of the American Fancier discussed at length in the August 1st issue.

The next one evoked almost endless discussion. Amendment to sell one copy to each member at wholesale price was defeated—37 for and 40 against. The amendment itself, when brought to a vote, carried—42 for; 32 against. But lacking a necessary two-thirds vote it failed to pass.

The fourth, in the length and thoroughness of its discussion, rivalled the third. It carried —38 for; 33 against—but also lacked the necessary two-thirds, and hence failed to pass. The fifth failed, and the sixth carried.

The seventh on the A. P. A. poultry show rules carried. With an explanation from Mr. Crawford that by next year he hoped to still further improve on them, especially as to reducing their length.

Eighth carried. Ninth, tenth and eleventh rejected.

The eleventh amendment was rejected on a compromise and a committee of five appointed to report on the whole matter of licensing judges at the next annual meeting.

The report of Executive Committee on new licenses to judges developed the fact that some applicants had been refused licenses.

Reminiscenses by Philander Williams at Tuesday evening's session was an interesting history of how they did thing at American Poultry Association conventions a quarter of a century back.

Committee of the 1910 appointed seven new members in addition to the standing reunion committee. Mr. Kimmey again chairman.

TO THE SECRETARIES OF POULTRY EXHIBITIONS.

You can offer any one of the above cups or medal as a premium at your Show in return for a little energy on your part. Full particulars of the proposition will be sent you upon request.

1st Cock—1st Hen—1st and 2nd Pullet at Utica, 1908
Bred and owned by Warren W. Dickens, Middleville, New York

Perhaps the man who has been feeding his hens all winter, forcing egg production, and then along in March sets hens should expect trouble. Eggs from hens that have been thus forced contain many reasons for not hatching. When they do hatch, strong chicks should not be expected. You cannot force nature too fas. Strong chicks should not be expected from eggs laid in the spring by hens that have been forced to produce winter eggs also.

The question is often asked how much grain should be fed to a dozen hens each day, etc. It is difficult to determine the proper amount. Besides it is not best to feed each day just exactly the same allowance. Watch the flock and note whether you think they require more or less than a certain stipulated quantity. It is always preferable to feed more than one kind of grain at night feed. Some hens have a preference. Mix common sense with your feeding.

ROSE AND SINGLE COMB BLACK MINORCAS

This picture shows some of the birds that made such a phenomenal winning at New York City and Cleveland, Ohio. Bred and owned by Mr. A. Faulds, London, Ont., Dominion of Canada. Four of the above birds are first prize winners at Madison Square Garden and Cleveland, and the Single Comb cockeral won second at the same place

Yoe, Pa., July 22nd, 1908.

MESSRS. L. W. LOTT & Co.

Dear Sirs: In response to the following, "What is a fair hatch? This question has been asked time and time again and we would be very happy to have our readers write us their opinion on this subject," in THE AMERICAN FANCIER of July 15th, allow us to say that 8 chicks to the setting of 15 eggs, we consider a fair hatch. Anything under six, poor. Ten or over very good in standard bred stock. However, we do not believe much in the egg business and would be well pleased if it were cut out entirely, as nine out of every ten buyers, we believe, are dissatisfied. A customer of Massachusetts writes us: "We only got twelve chicks from the fifteen eggs bought of you, hope you will replace the balance." Another from New York State writes: "Eggs arrived O. K., four broken, hatched five chicks from the remaining eleven eggs, many thanks, will know where to go when in need of more eggs as they are very fine chicks." Another in Ohio called us queer names because he only hatched twenty-six chicks from thirty eggs and asks us to replace the balance. We guarantee nothing but to send eggs that hatch well at home. We claim no honest fancier can guarantee a certain number to hatch, when out of his hands he has no control over them, and believe the better plan is to buy the birds, and would ask your opinion as to the value of line bred birds with an honest score of from ninety to ninety-two to ninety-four points.

We have been breeding fancy poultry for twenty-four years and have long ago discovered that no fancier who makes a business of selling eggs for hatching can do so satisfactory to both buyer and seller.

Yours truly,
R. A. KNISELY & SON.

Jericho and East Norwich, L. I.

Are not situated on the railroad, so we were met at the Hicksville Station by Mr. Robert Seaman, and a fast automobile over good roads, quickly carried us from the station, through Jericho to East Norwich, stopping at the Westlook Farm. Leaving the auto in Mr. Hudson's new barn, we started for one of the duck ponds and found Mr. P. K. Hudson in the wire netting enclosure which surrounds the pond, and considerable land covered by heavy underbrush and tall trees. Here we found ducks of almost every variety, many of which are so rare that there are only a few specimens in this country. On the heavy wooded land around the pond we found some grand turkeys with their young, and were informed that the hatches had been most successful. Leaving this pond we went to another one in a different location of the farm, and there on the borders found hundreds of Pekin and Indian Runner Ducks, and out on the water, many specimens of wild duck. After spending considerable time here, we went through the poultry buildings which are all new and up-to-date in every particular. In many of the runs we saw White Wyandottes of quality, and youngsters with all indications of developing into blue ribbon birds. The Wyandottes are all housed in muslin front houses which undoubtly has a great deal to do with their healthy appearance.

Mr. Hudson and his manager, Mr. F. E. Blowers, were very enthusiastic over their poultry, and well might they be for they have the quality of stock that a true fancier is proud to own, and after spending all morning with them and regretting that we could not accept Mr. Hudson's invitation to dinner, we once more found ourselves driving beyond the speed limit over a smooth road to Mr. Seaman's house for dinner. Whether it was the good road or the prospects of dinner that increased our speed is hard to tell, but at any rate we drove the car to her best and forgot about the speed limit.

After dinner at Mr. Seaman's we looked over his flock of about 700 Rhode Island Reds. The first bird that attracted our attention was an old friend, one that we had become acquainted with at the last Madison Square Garden Show and although this cock was unplaced, we considered him a better bird that the 4th cock which was also owned by Mr. Seaman. It looks as if Mr. Seaman had not been selling many of his winning birds, because we noticed many of them among his flock and will watch with interest the pullet which won 3d at New York and special for the best shaped female to see what awards she receives at some of the coming exhibitions. We would also like to see Mr. Seaman exhibit a cockerel which was 1st at Richmond Hill last year, and understand he would have been at the last Madison Square Garden, but he was out of condition. We also saw the 1st and 2d Richmond Hill pullet and 1st Richmond Hill and 1st White Plains hen.

Mr. Seaman told us that he had a very successful season and had received orders from many of his old customers. This is not at all surprising, for Mr. Seaman has always "delivered the goods" and more than pleased his customers with their purchases. In addition to being an active Rhode Island Red Fancier, Mr. Seaman is a hard worker for the Rhode Island Red Club. The American Poultry Association and the Empire Poultry Association.

After spending most of the afternoon among the "Jericho Strain" of R. I. Reds, we rode over and saw Mr. Cook's specimens of wild duck, and after an interesting stay here, we hurried to the station and was carried back to our noisy City of New York.

July 18, '08.

EDITOR AMERICAN FANCIER,

Dear Sir: I noticed in the issue of July 15th of your valued paper, in the Editorials, remarks anent the poor hatching of Muscovey duck eggs.

If what I may write will be of benefit, use it.

I have bred Muscovey ducks for the last seven years and never yet had any trouble as regards hatching or rearing except by causes explainable, although unforseen, such as accidents, etc., unless it be when tried in incubators.

It is a fact that Muscovey eggs will not hatch with any degree of certainty in an incubator, but why they will not, is still a mystery. Of course, there are theories, the most plausible one is that the egg cannot survive the artificial heat and conditions prevailing in incubators for a longer period than four weeks, and observations seem to prove it. The duckling in the egg lives till the fourth week, but at the fifth week is dead. If it survives and hatches it is a weakling and soon dies.

With the natural methods it is different, that is, I find it so. I find them exceedingly fertile and the ducklings when hatched under hen or duck come out strong and healthy, in fact it is a saying with us, that every egg will hatch and every duck live, barring accidents.

I allow my breeders access to a pond, but shut them up nights to secure the eggs which they lay very early in the morning, yet even when I kept my breeders confined the eggs were just as fertile, although their yards were generally large, well grassed plots with movable fences, I always kept their water tubs well filled and fed them the same as I would my hens.

In setting duck eggs, I fix a nest for a good sized hen, using a clean box of any sort, place plenty of tobacco stems or loose tobacco in the bottom and then fill up the box with a lot of good, soft hay, hollowing out to make a nest that will hold eleven duck eggs well together. I dust the hen once a week and have no trouble in making a hen stay on the eggs the five weeks. One cause of the excellent fertility, I believe, is because I allow only from four to six females with a male. If I have more than one such flock, I separate the flocks into squads of four females and one male.

Perhaps this year's record of hatching will be of interest. Five hens were placed on 56 Muscovey duck eggs; from the 56 eggs were hatched 43 ducklings, and one crazy hen that stood up setting was the cause of the most of the other eggs not hatching, although every egg was fertile. I also placed under three Muscovey ducks, 40 duck eggs and hatched 29 ducklings; one duck that had 16 eggs hatching 15 ducklings. Of the three old ducks, one was like the crazy hen, yet she hatched five ducklings.

My experience this season is similar to other years, the trouble was not so much in infertility as in the disposition of the hens and ducks I used for setting. I trust these few words will help some one. Yours,

W. H. CARD,
Manchester, Conn.

Eggs, $3.00 per Setting
$5.00 per 30
235 Child Street, Rochester, N. Y.

THE illustration on cover page is made from a photograph taken at Westlook Farm. The picture has not been retouched, but shows the ducks just as the camera caught them. Of course, some slight imperfection in this picture could have been fixed up by our artist, but we preferred to use it without retouching. The drake was raised in 1906 at Westlook Farm which is situated at East Norwich, L. I., and owned by P. K. Hudson. Won first prize in 1907 at Mineola and Richmond Hill, and 2nd prize at Madison Square Garden. It is believed that first prize would have been awarded, but for the fact that some of the feathers had been torn out by another bird. The duck was also raised at Westlook Farm and received first prize at Madison Square Garden, 1907.

Mr. Wm. V. Russ, Treasurer of the United Incubator and Poultry Supply Co., died after a brief illness at 10:10 A. M., Monday, August 3d. Mr. Russ for many years managed the Excelsior Wire and Poultry Supply Co., and was well-known to the poultry fraternity as a man of broad business experience and thoroughly conservant with every need of the poultry raiser.

* * *

Mr. Morley C. Moat, of Amsterdam, N. Y., was found dead at his home Sunday afternoon about 3 o'clock. It is believed that Mr. Moat started up the stairway in the dark and missing the step fell backwards, and the force of the fall broke his neck and death was instantaneous? Mr. Moat was fifty-one years of age and of late years had done considerable drawing at his home and made a number of original sketches of high class fowls. He was a lover of pure bred poultry.

* * *

A novel attraction will be the exhibit of water fowl at the Calhoun Fair, Marshalls, Mich., for under the direction of Geo. E. Barnes, a lake will be constructed in which water fowl are enclosed and which undoubtedly will prove a star attraction for the fair.

* * *

Mr. Chas. M. Smith, who is well-known to our Long Island subscribers and by many others in various sections, has sold out his poultry supply store at 39 Flatbush Avenue, and will raise various varieties of pigeons and bantams for W. E. Hawkins, Amityville, L. I. He goes there with our best wishes for success. His poultry supply business was purchased by Mr. Hunt and will continue at the old address.

The Alaska-Yukon Pacific Exhibition has raised by subscription $1,000,000, and now Congress will appropriate in addition $600,000. This places the company arranging for the exhibition on a solid financial foundation.

A Quantity of Quality Circulation Signifies More Than Simply a Great Number of Readers

With the September 1st issue, our advertising rates will increase as we have stated in different notices which have been published in the last few issues. Quite a few checks have been received within the past two weeks for renewal of classified and display advertising at the old rates, but of course, we could not do this as we want all our advertisers to share alike and pay the same price, and when we explained the matter to our advertisers they thought it allright and in most every instant have reduced the size of their ad. or sent us payment for the increased rate.

Our present advertisers who have advertised the right proposition must have received profitable returns because they have stayed with us and many after trying a one or two time ad. took out a contract for twenty-four consecutive insertions.

In the past it has been clearly demonstrated to them that money spent in advertising was a good investment and as our columns paid at our old rate it will surely pay much better at the new rates as our circulation will be increased to a greater proportion than our advertising rates, and the high quality of readers will be maintained.

We are continually working subscription campaigns among people just starting to raise poultry and therefore a large number of our readers are beginners, while our main support are the leading fanciers many of whom are wealthy men who breed merely for pleasure and who subscribe to our paper only. They are big spenders, and if the quality of the stock offered is worthy of their attention we know of no better place to advertise it than in THE AMERICAN FANCIER.

It was only a few days ago when the publisher of a leading Western newspaper remarked to me that he thought the advertising rates of the *New York Post* were too high, comparing the circulation with other newspapers, and it certainly is if a comparison of only circulation and not quality of readers is made.

Mr. M. M. Gillan, a veteran in the advertising field, once said that there was a tendency to laying great stress on the amount of circulation, but this he claims is a mistake for, from an advertiser's point of view, it is the character of the readers which should signify much more than the number. And he further believes that one publication differs from another in advertising value as much as one star from another in glory and this in spite of any question of circulation.

Many of our leading magazines and newspapers have a vast circulation and yet reach constituencies of small individual buying power. The advertiser should know what class of people are apt to purchase his goods and then advertise in the mediums that reach the desired class. Leaving poultry advertising for a few moments, let us take the advertising of automobiles, and would it not be foolish to insert a motor car ad. in a publication devoted to children's stories? Or an advertisement explaining the merits of some woman's article in a financial paper, or cigars in a woman's publication. Of course some advertisers only desire general publicity and such articles as a soap, tooth powder, etc., could be profitably advertised in almost any of the leading newspapers or magazines.

Another important consideration is to advertise seasonable goods and we can exaggerate the subject a little by asking would it be profitable to advertise sleds in the summer or straw hats in the winter. The same careful study that is given general advertising should be given to poultry advertising and advertisements so worded that they are seasonable and mediums selected that go to the class of readers who are apt to be interested in what you have for sale.

The circulation of THE AMERICAN FANCIER is made up of three classes of readers—the beginner, the commerical breeder and the fancier. Combined they make the right kind of circulation for a poultry magazine and gives a quantity of quality circulation.

Many of our readers will recognize in our columns numerous advertisements that have been with us for months. Now the advertiser is not a philanthroptic kind of a man and the fact that he continues to advertise in our paper simply means that he is satisfied with the returns which he is getting.

I believe that most all the poultry publications must refuse a number of unreliable advertisements each month and would say that within the past twelve months we have turned down a considerable amount of advertising on account of its character. Although we have not kept an actual figure, believe that we have refused advertisements which, if inserted, would have amounted in total to over a page each issue. A poultry magazine carefully published must carefully guard its advertising columns.

* * *

J. H. Drevenstedt in his notes in passing in the August 8th issue of the *American Stock Keeper,* has the following to say in reference to the proposed amendment to Article 4 of the by-laws of the American Poultry Association:

Editor Nourse in the August *Poultry Herald* writes:

"Mr. Ring's proposed amendment to Article IV of the by-laws reads as follows:

'Organizations which are members of the American Poultry Association, upon holding an exhibition, shall engage the services of only such judges as are licensed by the American Poultry Association and in good standing at the time the exhibition is held. Members failing to observe this rule shall be suspended from the privileges of one year.'

This amendment seems wholly consistent with the stand that the American Poultry Association has taken with respect to judges. Moreover, it would not be a difficult rule to live up to, for after the 33rd annual convention practically every judge of importance will be licensed."

"Suspending New York and Boston, would be a fine piece of foolishness for a national body like the American Poultry Association to be guilty of, and this is just what would be the result if Mr. Ring's amendment is adopted. Managers of such shows select these judges to satisfy exhibitors and to keep within the reasonable expense zone at the same time. We will also venture the opinion that a goodly number of judges of considerable importance will not be licensed, yet continue to judge at big shows for years to come. It is just such proposed legislation as the above that keeps some organizations and a large number of good fanciers from joining the A. P. A. Intelligent breeders of standard bred poultry successful market poultry raisers and managers of first class poultry shows when asked to join the American Poultry Association, invariably ask, 'what benefit is it to me to belong to an organization that enacts laws antagonistic to local and individual interests and privileges?' Others that have joined become passive and take little or no interest in the Association. These men like chickens and will spend hundreds of dollars to attend poultry shows for the recreation and benefits they derive in talking it over with their fellow fanciers, men, who, like themselves, are to the manner born, firm and staunch admirers of the feathered tribe. They are the bone and sinew of the American fancy. To them we owe much, for without their support the poultry shows would soon be a thing of the past. And it might as well be known to the 'powers that be' that a narrow contracted policy will never command their respect or moral support. The open door policy is what appears to men of their heft and sportmanship."

* * *

In the last issue of *Farm Poultry,* A. C. Smith in his article, titled "Licensed Judges Compulsory," explains some good reasons why the proposed amendment to Article IV of the by-laws should not be adopted. The following are extracts from his article:

"Some are wondering what this business of licensing judges was instituted for, and others are wondering what it amounts to. And while these are wondering, many are applying for licenses. Some of these many are comparatively well-known and somewhat experienced judges. They doubtless think they are following the crowd. Others are using their licenses to lift them to prominence. But what are the advantages of this license?"

"We frankly admit that to a certain class of judges, a plentiful sample of which can be had by consulting the list licensed at the last annual meeting, there is a big advantage in securing the A. P. A. endorsement, which to the uninformed means more than it should. This class of judges which are only semi-competent, either through lack of ability or experience, perhaps both, can undoubtedly get more engagements with the A. P. A. endorsements than without it; but at whose expense? There are so many shows and so many judges to fill them. The competent judge has been placed on a level with the semi-competent, and if the latter gets more engagements the former will get less."

"Then as far as the judges are concerned, this institution of A. P. A. creation works to the detriment of the competent and experienced judge and to the benefit of the heretofore almost unknown and but partially competent one.

* * *

"It will be to the advantage of small shows to have certain judges that they cannot have under this proposed rule. Poultry shows, as a rule, have none too easy a time, financially or otherwise, and it is a most unwise step to hamper them with any such rule as is proposed. After all, where is there a single ad vantage to the proposed amendment, anyway?"

* * *

During the week of the Allentown Fair Poultry Show, the Allentown Fanciers Association will maintain a tent headquarters on the grounds, day times, and have "open house," nights, at their down town rooms. This expressly for the benefit of visiting poultry people, who will find entertainment, a chance to sit down and congenial company.

They will also find this year, at the office of the poultry superintendent, a full list of private homes that will take roomers or lodgers fair week. Other years visiting poultry people have found Allentown so full that there was absolutely no chance to get into the hotels unless rooms had been engaged weeks before.

* * *

Last season Wood & Freeman ran a classified ad. in our paper for one year, at $8.00, and as the ad. expired with August 1st issue, we wrote, asking for his renewal for one year which would permit of a fifty word ad. in August 15th issue, but only a 25 word ad. in the remaining 23 issues, that is up to and including August 1st, 1909. Here is their reply:

August 8, 1908.

THE AMERICAN FANCIER:

THE FANCIER is the best advertising medium we ever used. Run the old ad. August 15th and then run the following ad. for one year.

Yours truly,

WOOD & FREEMAN,

Fitchburg, Mass.

The AMERICAN FANCIER

ESTABLISHED 1893.

A Magazine devoted to Standard-Bred Poultry and Pigeons.

LEONARD W. LOTT, Editor

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations.

Expirations—Paper is discontinued at completion of subscription term. If a subscriber wishes a subscription continued he must notify this office and send the amount in payment for same. Renewal should be made at once to avoid missing a number.

Change of Address—When writing to change address, the old one must be given as well as the new.

Orange, New Jersey

Will undoubtedly hold a poultry show from February 11th to 14th. Some of the leading fanciers are working on this proposition, and believe that they will have one of the biggest shows out side of New York, Boston and Philadelphia that has ever been held in the East. The prizes will be most liberal and entries are desired from everywhere, and not only New Jersey, for this show is in no way a local one, but open to the world, and fanciers from many sections will undoubtedly exhibit. The hall, where the exhibition will be held, is 100 by 110 feet and with additional room space next door to the hall; there will be a total floor space of 13,000 square feet. In a later issue we will give further information about the Orange show.

* * *

Scranton, Pennsylvania.

The fourth annual exhibition of the "Quality Show," of Scranton, Pa., will be held during the week of December 7th to 12th. Premium list will be ready October 20th . The judging will be done by Miss Sophie Pitchlynn, W. Theo. Wittman, J. H. Wolsieffer, B. W. Mosher, W. C. Denny, A. F. Pierce. A. W. Close is the Secretary.

* * *

Charlotte, North Carolina.

Will hold their 12th annual poultry exhibition from January 16th to 20th. E. G. Wardem is secretary of the association, and J. S. Jeffrey and R. L. Simmons will place the awards.

* * *

Washington Show

Will be held January 25th to 29th. Premium list will be ready about December 1st, and it can be secured from Calvin Hicks, the secretary, at Rockville, Md.

The Hanover Fair

Will be held September 15th to 18th. The association is now erecting a new poultry building with the light coming in from the sides and roof, to be completely equipped with best coops and most modern in every respect. We hope that not only many of our Pennsylvania readers, but those situated in the surrounding States will send their birds to Hanover, Pa. The awards are very liberal and you are assured of the best of treatment. Mr. Chas. S. Shirk, a director of the association and manager of the poultry department will be pleased to send further information and premium list upon receipt of your request. Better write him at once. His address is Hanover, Pa.

* * *

Greenville, Pennsylvania.

The Perkiomen Valley Poultry Association will hold their fourth annual exhibition at East Greenville, Pa., December 21 to 26, 1908. Charles Cornman, judge; F. G. Christman, secretary.

* * *

An Unsolicited Testimonial.

July 12, 1908.

AMERICAN FANCIER,

Gentlemen: In spite of the poor egg season my classified ad. has given such good results that I am going to take fifteen lines per issue for one year, and enclose photo of one of my winning hens and copy.

Yours truly,
H. H. KINGSTON.
R. F. D. No. 4, Rochester, N. Y

* * *

August 3, 1908.

Gentlemen: Enclosed please find check for a display ad. to run eight times (4 months) as my classified ad. in your paper gave great success.

GEO. F. PRATT, Mgr.,
Black Minorca Farm.
Le Raysville, Penna.

Kansas City, Missouri

Have arranged to hold a poultry exhibition in connection with their live stock show to be held from October 12th to 17th. Jas. A. Tucker of Concord, Mich. will place the awards, and P. H. De Pree, 932 Jackson Avenue, Kansas City, Superintendent, and Mr. A. H. Thompson, Nashua, Secretary.

* * *

Randolph, Vt., Aug. 6, '08.

LEONARD W. LOTT & Co.

Dear Sirs: I received the August 1st issue of THE AMERICAN FANCIER. I am having inquiries about my stock already. No other paper for me but THE AMERICAN FANCIER.

Yours truly,
E. L. WELLS.

* * *

American Cornish Club.

The 1908 catalogue of the American Cornish Club has just arrived. It is well printed, profusely illustrated and should be read by every poultry fancier interested in the Cornish Fowl. The secretary, Mr. F. H. Williams, of Minneapolis, Minn., will be pleased to mail one upon receipt of 10 cents in stamps, which price does not pay the cost of printing.

* * *

A NON-EXPERT TO JUDGE.

Judge Trexler to Pick Out What He Thinks is the Finset Chicken, Irrespective of Sex.

Judge Trexler has been appointed by the Allentown Fanciers' Association to pick out what he thinks is the finest exhibit in the poultry exhibition at the forthcoming Allentown Fair. The cup for this particular prize has been presented by Congressman Rothermel and is valued at $50, and the particular point of interest that attaches to the fact that Judge Trexler is to be the judge is that all that Judge Trexler knows about chickens or roosters is that the hind legs appeal most strongly to his gastronomic susceptibilities if properly served with the right kind of gravy. If Judge Trexler is observed prowling around anybody's hen coop between now and September the owner will please not shoot or call the police. He is only engaged in getting pointers about chickens and whether they scratch gravel backwards or forwards.

* * *

Peterboro, N. H., July 18, 1908.

EDITOR THE AMERICAN FANCIER:

Gentlemen: I would rather go without a week's rations than THE AMERICAN FANCIER, for it is the best poultry paper published without any exception. Respectfully yours,

GEO. T. MORRIS.

* * *

Tennessee State Fair Poultry Show.

Arrangements have been completed for holding the greatest Poultry Show ever held in the South at the Tennessee State Fair at Nashville, Tenn., September 21-26, 1908. The show will be cooped and fed by the Spratt's Patent Co., under the management of Mr. T. Farrar Rackham, of East Orange, N. J. Judges J. H. Drevenstedt, of East Orange, N. J., W. C. Pierce, of Indianapolis, Ind., and S. T. Campbell, of Mansfield, O., have been engaged to award the premiums. The Tennessee State Fair Poultry Show, which is now in its third year, is conceded to be the greatest market place for pure bred poultry in the country. Situated right in the center of the greatest poultry field in the world, the advantages for exhibiting at the Tennessee State Fair Show are not equalled by any other show in the Union. Premium lists and entry blanks are now ready and can be obtained by addressing John A. Murkin, Superintendent, Nashville, Tenn.

* * *

The new Wyandotte book by Theo. Hewes, with illustrations by I. W. Burgess is to be highly commented. All the varieties of Wyandottes are profusely illustrated in colors, with detailed description also instructions on judging this variety. The price of the book is only $1.00 and can be obtained through the office of THE AMERICAN FANCIER or from the publisher, The Inland Poultry Journal Co., Indianapolis, Ind.

Riverhead, New York.

Will hold a poultry exhibition in connection with the Fair, September 15th to 18th. In former years the Suffolk County Agricultural Society only accepted entries from Suffolk County, but at the coming show, the poultry class is open to all of Long Island, and we hope that the fanciers in this territory will write at once to Mr. Harry Lee, the Secretary at Riverhead for list of prizes. We understand Spratt's will coop the show.

* * *

Office Secretary-Treasurer, South Central Branch American Poultry Association.

The result of the election of officers for the South Central Branch of the American Poultry Association, just held, resulted as follows:

President—F. J. Marshall, Atlanta, Ga.; Vice-President—M. F. Norris, Lexington, Ky.; Secretary-Treasurer—John A. Murkin, Nashville, Tenn. Executive Committee—C. Fred Ward, Winter Park, Fla.; J. T. Davis, Lewisburg, Tenn.; A. J. Paxton, Houston, Miss.; J. O. Norton, Nashville, Tenn.; L. K. Terrell, Birmingham, Ala.

* * *

Red Bank, New Jersey

Will hold their poultry show from September 4th to 7th. This will be the first annual fair for the Monmouth County Agricultural Association and classification and premiums are most liberal. Entries close on August 25th, so you had better write J. H. Drevenstedt, of Red Bank, at once for a premium list.

* * *

Lowell, Indiana

Will hold their 2nd annual show January 6th to 8th. B. H. McCracken will place the awards, and premium list can be obtained from the secretary, Frank Malloy.

* * *

Newark, Ohio

Poultry show will take place from February 2nd to 6th. Chas. McClave and H. M. Close will place the awards. The premium list will be ready about January 1st, and can be obtained from Ed. M. Larson, the secretary. Entries close January 27th.

* * *

Paterson, N. J.

The Paterson, N. J. Poultry Show committee have engaged League Hall for their show, December 9, 10, 11, 12, 1908. This hall is the largest one in Paterson, and the fanciers that have exhibited in this hall in 1905 and 1906, will no doubt be pleased to learn that at least 25x58 feet have been added to the floor space for show purposes, and the management will be able to handle from 1,000 to 1,200 birds and show them to the very best advantage for both the exhibitors and the public, and the latter, it must be said, have given the association their support and appreciated their effort, and in return the association is putting forth every possible inducement to the fancier to bring to Paterson the very best in the land. To do this they are offering on a entry of five or more birds, $3.00 for first prize and $2.00 for second prize money, with ribbons for third, fourth and fifth prizes; on two to four birds in a class, first prize honors will be given and second prize money awarded, together with the silver cups and gold special. It should be a very good inducement for exhibitors, besides that to know that the awards will be placed by the following judges: J. H. Drevenstedt, Wm. J. Stanton, P. A. Cook and Robert Seaman. Secretary and Superintendent Quentin will look after the birds while on exhibition there, which will insure the best of care and attention, especially to exhibitors who are not able to attend the show in person.

* * *

The Great Southern Poultry Show Circuit.

Beginning with the Tennessee State Fair Poultry Show at Nashville, Tenn., September 21-26, then the Tri-State Fair Poultry Show at Memphis, Tenn., September 28, October 7, followed by the Alabama State Fair Poultry Show at Birmingham, October 8-17, the South offers one of the best Poultry Show Circuits in the Union. Breeders can obtain full information by addressing John A. Murkin, Circuit Manager, Nashville, Tenn.

Nests should be looked at morning and evening during this the height of the breeding season. Young pigeons are often neglected by their parents when they are about a week old, in which case they may require to be hand-fed. If the old birds are doing their duty properly the youngsters will have their crops almost full in the evening, though empty in the morning. The advantage of a separate loft or division in which to place the squeakers when they can fly and feed themselves is very apparent now. The old birds frequently ill-treat their full-grown youngsters when the next nest of eggs is hatched, and it is better in every way if the youngsters are taken out of the breeding loft as soon as they can look after themselves.

It is a great advantage to have the birds tame. It makes a difference whether they rush off the nest when approached, or allow the eggs or young ones to be handled with but slight fuss. Most sitting pigeons, either with eggs or young, will give sharp blows with the wing at any hand that attempts to investigate the nest. That hand should be carefully passed under the breast of the bird, and the eggs or young ones taken out, so that the hand receives the buffeting, and not its contents. The eggs of a pigeon being white, and the shell transparent, it is easy to tell, after the eggs have been incubated for five or six days, whether they are likely to hatch or not. If clear at the expiration of that time they should be removed, but if opaque the probability is that they contain young ones.

When the young pigeons are acquiring their adult plumage they must be looked at pretty closely to see that they are well. A bird that is off his feed, and is seen to sit with feathers loose and huddled up, should be caught at roosting time and examined. The breastbone most likely will be found to be prominent, and the pigeon very thin.

A small pinch of dry Epsom salts should be administered by placing it at the back of the tongue. The day after this has been done, and for several days following, a cod liver oil capsule should be given night and morning, and are useful when valuable birds are kept. A young bird that does not shed its nesting feathers freely should have a few of the tail feathers pulled out.

A difficult matter for the novice is to form a correct opinion regarding the future merits of the young ones. Some varieties are as good in their first year as they will ever be, and can be correctly judged after the birds are four months old by anyone well versed in the points of that particular breed. Many of the breeds, however, thicken so much about the head with age, and in other respects so develop and change, that great practice and experience are necessary to recognize the future prize winners in their early stages. A slight narrowness of skull in this bird or flatness of head in that, may later disappear. So a young pigeon about which there is any doubt ought not to be disturbed.

* * *

We recently noticed a youngster with the crop filled with air and the skin appeared very glossy. Not being a pouter this is very unnatural. The cause probably is canker, in one of its stages.

The victim probably after its throat becomes nearly stopped up, is in some way able to draw in air which it is unable to discharge.

The owner made a slight incision in the skin and the air finally escaped, and with proper treatment for canker believes he can save the bird.

* * *

Birds bred from a solid foundation are most likely to show their good qualities in later generations.

The mating of two unbeaten champions does not necessarily mean champion youngsters, in fact most results from such mating are very disappointing.

* * *

The owning of a certain "champion" does not always mean that fancier has the best of stock.

Many sales are made through the winnings of one or two birds, and this particular bird is generally purchased with this idea in view. The fancier who year after year produces birds, whether they are fortunate or not in capturing the much coveted first, is the party from whom to purchase your stock to improve.

* * *

We clip the following from the English publication, "Pigeons," in regards to the band question:

Marking Rings in America.

The pigeon fanciers of America appear to be just now in the throes of a not-impersonal newspaper discussion about marking rings. We are, of course, not sufficiently acquainted with the facts to offer a definite opinion, and we are not going to interfere if we were, but one of the phases of the dispute seems to be based upon whether the recognized marking rings in America shall be sold by the Pigeon Club of that country, or by a private firm. So far as the Pigeon Club is concerned, it is stated that many fanciers who have placed orders with it for rings have been unable to obtain them, and the breeding season being on, these fanciers have had to go to a private firm. Some fanciers, in fact, have used the English Marking Conference Rings, having obtained a supply direct from Mr. Allsop. In the absence of any explanation, it does seem rather comical that the Pigeon Club being the authorized body for the supply of rings should have failed to meet the demand.

American Pigeon Club's Dictum.

In pursuance, we suppose, of its authorization to supply the recognized marking rings, the American Pigeon Club has given its dictum that no other rings but those issued by the club will be recognized at shows. And it has accordingly endeavored to get the show authorities to insert a rule to that effect in the schedules, whereby, of course, youngsters not wearing the American Pigeon Club rings will be debarred from competition. Fanciers are kicking against such a rule, on, we think, the not unreasonable ground that they have not been able to obtain the rings, and that it is absurd to penalize owners whose birds do not wear something which fanciers have not been able to obtain. And so the feathers fly!

* * *

Allentown Show.

The pigeon department will be under the management of Mr. Ray S. Brown, the well-known Turbit fancier. Six hundred and fifty dollars will be offered in cups and gold, with an entry of only 50 cents a bird. Each pigeon will be cooped singly in new coops. Premium list with full particulars can be obtained from H. B. Schall, secretary, Allentown, Pa.

Oriental Frill Club.

The following is the result of the ballot just closed for judge and place of meet for the next annual meet of the American Oriental Frill Club: For Place of Meet—New York, 13; Boston, 8. For Judge—W. W. Kennedy, 12; M. J. Kafer, 6; H. E. Johnson, 1; Geo. Ewald, 1; George B. Hart, 1. I have written Mr. Kennedy and he writes that he is willing to place the awards if the management of the show will accept him, which I believe they will. It now remains for each member to do his best to fill every class and support the show in every way possible. More specials can be used, not only for the club meet, but for other shows as well. We not only want to make the meet a success, but see to it that every show has a good exhibit of this variety. It is unfortunate that several good shows come about the same time, as it will no doubt hurt their entries, but the fanciers should get together and see to it that their variety is well represented. Let us all pull together with press articles, specials and entries and make this a banner year. We have now reached the point where we must all pull together or what has been gained will be lost. Bring in more new members and whoop it up for Orientals.

A. A. Ashley,
Secretary.

Your Pigeons will do well if you give them FOUSTS HEALTH GRIT, in use for 18 years

A preparation necessary to the digestive nature of cage birds, combined with medicinal properties that insures health and sturdiness. Most all the large pigeon breeders use it and one says " of course, there are lots of other grits cheaper, but there are *none as good as Foust's.*" No other grit or medicine needed. Send for free sample and watch the pigeons eat it.

FOR SALE

FOR SALE OR EXCHANGE—POULTRY, Pigeons, Dogs, Angora Cats, Belgian Hares, Rabbits, Rats, Mice, Guinea Pigs, Incubators, Brooders and supplies. F. O. Grossbeck, prop., estab. 1888. Breeder, Exhibitor, Shipper and Judge. Correspondence solicited. Box S, Hartford, Conn.

BUFF ROCKS, SOLID COLOR; LOW combs, bay eyes; 50 Buff Rocks; 20 Buff Leghorn, Buff Cochin and Buff Cochin Bantam Cockerels. All bred from 90 to 95½ point stock, without losing sight of utility. Inquire with stamp of the Buff specialist and Judge. Dr. C. W. Coolidge, Bristol, N. H.

Some Poultry Publications have REDUCED their advertising rates, while the *American Fancier,* starting with September 1st issue have INCREASED theirs. THERE'S A REASON.

A 25 word Classified Ad. starting with September 1st issue will cost 50 cents per insertion. Or 12 times (6 months) $5.00, or 24 times (1 year) $8.00.

Change the wording of the ad. as often as you like.

Since we announced our increased rates many checks have been sent us for six months and one year advertising at the old rate. But all ads. were respectfully refused at the old rate. Therefore every advertiser comes in at the same rate.

On another page of this issue we have an article on advertising. Read it, and then write us for copies of a lot of unsolicited testimonial letters, showing returns which are really phenomenal.

FOR SALE—ONE YEAR OLD HENS, R. C. R. I. Reds, and S. C. White Leghorns. We have a pen of 50 S. C. White Leghorns, last year's pullets, the lot for $35.00 or $9.00 per dozen, all fine laying stock. Phelps' Poultry Farm, Corfu, N. Y.

FOR IMMEDIATE SALE—TWO COLUMbian Wyandotte Yearling Cocks direct from T. Reid Parrish, Nashville, Tenn. Cost me $12 each. Have a lot of nice chicks sired by them, so offer them now for $5 each. Can spare two good hens with each (not related) at $2 apiece. One Yearling Light Brahma Bantam Cock and five hens, exhibition birds, the six for $12. Thirty fine American Dominique hens and three cocks, $1 and $2 each. Silver Penciled Wyandotte cock and hens $2 each. These prices are for immediate sale; they will be double two months later. Order at once if you want any of the above. A few young birds for sale after November 1st.
DR. W. H. HARWOOD,
Chasm Falls, Malone, N. Y.

POULTRY AND DAIRY FARM 120 ACRES, 75 miles from New York; two railroads, five stations, one to two miles; two cities in easy driving distance; also direct train service. Stocked with two of the best selling breeds of poultry; well established, fancy trade. Incubators, brooders and appliances; extra good, nearby markets. Location high and uncommonly healthy. Lime kill and plenty of lime rock on farm. Address "Bargain," care of the American Fancier, 30 Church street, N. Y.

IF YOU WISH TO BUY A FINE PLACE, extra good buildings, running water, barn 83 ft. long, new house, poultry houses, stock, tools, complete for $3,500, please write for particulars.
CHAS. E. REMINGTON, The Ardell Farm, Perrysburg, N. Y., Cattaraugus, Co.

Both stock and eggs; an old established strain, line bred 15 years; are unequaled in the show room or as layers of large, brown eggs; large, vigorous birds; true Wyandotte shape; satisfaction guaranteed; Eggs, $3.00 per set; stock a matter of correspondence. Joseph L. Shull, Gloversville, N. Y.

GEO. COOKINGHAM, PHILMONT, N. Y. Breeder of Columbian Wyandottes; winners wherever shown. At the recent Hudson, N. Y. Show, with one entry won first pen fowls, while many birds of my breeding won at the same shows in the hands of my customers; can sell good breeders; Eggs, $3.00 per setting.

WHITE WYANDOTTE EGGS FOR hatching from my Rochester winner, $5.00 per setting; orders booked now when a small deposit is made; twenty-five head of White Wyandotte Hens, twenty-five White Wyandotte pullets and twenty White Leghorn Hens for sale; if not satisfactory, money paid refunded, less express charges. Edw. F. Greth, Niagara and Oneail Street, Buffalo, N. Y.

OUR BUFF WYANDOTTES HAVE WON at some of the largest shows in several states this season, also at the great Montreal, Que. show. 1908 catalogue, the most complete booklet ever published by breeders of this grand variety will be mailed free to any address. C. F. Smithers & Co., Heuvelton, N. Y.

BUFF WYANDOTTE COCKERELS AT half their value to immediate buyers; sired by 1st Cockerel at Pittsburg and 2d Cock at Buffalo; eggs from two grand pens that will produce you winners at $2 per 13; $5 per 45; order at once. B. L. Waite, West Valley, N. Y.

OAKVALE YARDS — WINNINGS AT Auburn, 1908, Columbians—4 firsts, 1 second, 5 Specials. Buffs—1st Cockerel and Colored Special (one entry). Our Buff and Columbian Wyandottes have also won more firsts than all competitors combined at Holyoke, Mass., Gouverneur and Heuvelton; mating list. E. S. Wilson, So. Hammond, N. Y.

COLUMBIAN AND WHITE WYANdottes. Eggs from our Blue Ribbon Winners at great Rochester Show of 1907 and 1908 at one-half price from May 15th. Handsome catalogue and mating list free. High quality stock for sale. Satisfaction guaranteed. L. B. Sweet, Perry, N. Y.

FELL'S WHITE WYANDOTTES. HAVE won the $100 Challenge Cup at Scranton two years in succession. Five firsts at Wilmington, Del., two silver cups. Eggs from the four best pens ever put together, now $2 per 15; $5 per 45. Special sale of yearlings now on. A. J. Fell, Box A., West Point, Pa.

WYANDOTTES — IDEAL IN SHAPE, pure in color—the stay-white kind. A combination of show winners and egg producers. A few breeders for sale at $1.25 each. Some grand cockerels. I will sell you Wyandottes that will please you and send them on approval. After June 1st eggs at half price. Mrs. H. A. McClintock, Livonia, N. Y.

BUFF WYANDOTTES—TWENTY HIGH grade hens to sell for moderate prices. 50 good breeding hens and pullets for $2 each. One solid buff male for $12. My "Guide to Breeding Good Buffs," postpaid, 25 cents. Catalogue for the asking. Dr. W. N. Sanborn, Box 866, Bellingham, Mass.

AMERICAN CHAMPIONS—SILVER WYandottes, in the leading shows of America sinc 1888; their show record is unequaled; they have Wyandotte shape, size, Black and White Lacing; none better. Eggs $3 per 15. We are offering some grand breeders at half of their value in Silvers and Columbians. Samson & Alden, Kirkwood, N. Y.

WOULD YOU BUY SOME WHITE OR Buff Wyandottes, if you knew you could get just what you want? I have some good ones that will be sold for about half their real value to a quick buyer, to make room for youngsters; write and be convinced. W. G. Hale, Batsto, N. J.

PARTRIDGE WYANDOTTES HAVE WON WHEREVER SHOWN. J. F. TALLINGER, BARNARD, N. Y.

QUALITY SILVER LACED WYANdottes; layers and winners; sixty regular prizes at Auburn, Rochester, Johnstown, Buffalo, Waterloo and New York State Fair; specials for best exhibit, any variety of Wyandottes at Great Rochester Show, 1908; breeding and exhibition stock at bargain prices. Le Roy W. Seigfried, Route 28, Waterloo, N. Y.

FOR IMMEDIATE SALE—TWO COLUMbian Wyandotte yearling cocks, direct from T. Reid Parrish, Nashville, Tenn. Cost me $12 each. Have a lot of nice chicks sired by them, so offer them now for $5 each. Can spare two good hens with each (not related) at $2 apiece. One yearling Light Brahma Bantam cock and five hens, exhibition birds, the six for $12. Thirty fine American Dominique hens and three cocks, $1 and $2 each. Silver Penciled Wyandotte cock and hens $2 each. These prices are for immediate sale; they will be double two months later. Order at once if you want any of above. A few young birds for sale after November 1st.
DR. W. H| HARWOOD,
Chasm Falls, Malone, N. Y.

HAVE YOU ANY EXHIBITION BIRDS for sale? Just now they are in great demand. If your offer is right, a classified ad. in this column simply can't help but bring you good returns. Send ad. at once for September 1st issue.

PIGEONS

FOR SALE—A PEN OF 25 PAIRS MATED Homers; banded, listed, ready to breed; this stock cannot be excelled; the matings are guaranteed and we will refund money and pay return express charges if not as represented. The Rockaway Squabary, Rockaway, N. J.

PIGEONS FOR SHOWING—MATCHED pairs in Magpies, Tipplers, Helmets, Nuns, Archangels, Austrian Straussers, Cumulets, Chinese Owls, Jacobins, Trumpeters, Ice Pigeons, Parlor and Outside Tumblers, Dragoons and Homers; also, some good Black Cochins, White Crested Black Polish and Rose Comb Bantams; prices reasonable. J. H. Sell, Jr., Hanover, Pa.

We have received a letter from a subscriber stating he had a Wyandotte hen with a brood of twelve chicks, and after they were four days old deserted them and started laying. A cock bird of the same variety quickly took her place and gave them the best of care, covering them at night just as the hen would.

Although this appears most unusual to us, we would like to know if any of our readers have had such experience or know of any such instance.

* * *

The following we clipped from a newspaper believing it may interest our readers:

"Pittsburg, Pa., Saturday.—Six weeks ago a workman in the Pennsylvania repair shops in Allegheny left two dozen eggs in an abandoned tool box in the roundhouse. Steam pipes go through the box. All over the eggs a heavy layer of soft coal soon settled. Three weeks ago fourteen sooty chicks arrived. It was found that the steam pipes kept the temperature of the box at about 103 degrees. A second hatch of twenty chicks appeared, sooty but healthy. Another hatch is being prepared."

* * *

When a chicken has its head cut off it is self-preservation which prompts it to try to run. "Self-preservation is wisdom and, therefore, it is wrong to describe foolish conduct in a human being by saying he or she "Acts like a chicken with her head off." The act of wisdom cannot be called the act of a fool.

* * *

The following has been said to be an infallible way to see whether eggs are good: Pour enough water in a basin to cover an egg and place the eggs in the water. If they lie as placed they are good, but if they incline to turn they are not fresh and if they turn on end they are spoiled.

* * *

My observation convinces me that most people who fail to make a success in life are those who lack the energy to decide and act quickly. A hustler grasps the opportunity when it comes his way; he don't wait but he gets to work at once and makes himself busy. To succeed one must decide and act quickly, I quote a little article I read in a paper called "Success":

"Many men fail to get on in the world because of their lack of mental energy. Their minds seem incapable of independent action. If some one would give them a push, set them going, they might continue; but they cannot start—they have no self-momentum. Many of these people are sidetracked along the road of life, not because of their incapacity, but because the fatal lack of mental energy seems to have paralyzed their faculties. They possess power, but are apparently helpleses to use it. The great achievers, the men who do something in the world, are men of strong mentality."

* * *

Says a Missouri poultryman: A spoonful of kerosen should be always kept in the drinking water at this time of the year. Many diseases are held in check in this way. The fowl gets a little of the oil very time it takes a drink.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet. 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

POLICE DOGS.

Have for sale a few choice puppies of the famous black and tan Deberman Police dogs, the breed used by the German Government for war and police purposes. There are none better, none brighter, none more faithful and intelligent. Every farmer should have one. Send stamp for illustrated pedigree of pups, showing their excellent bloodlines—Sire one of the very best winners and workers ever seen. Seeing the pups means loving them—and I sell on approval and assure their being "true blue"

Theo F. Jager, Pittsford, N. Y.

We do all kinds of Printing for Poultrymen

CIRCULARS and CATALOGUES that are poorly gotten up tend to give an impression of carelessness. Good printing costs very little more but will bring much greater results. Good printing is not a mechanical knack—it is produced by brains. The man who turns out poor printing is what other printers call a "blacksmith." No matter how high the price, a printer who hasn't got it in him cannot produce artistic printing. Originality and artistic construction is what makes advertising literature attractive. Now-a-days, poor printing gets nowhere except the waste-basket. A well worded circular or booklet is a first-class salesman—but it must be well printed. Impressions are important, for many who get your printed matter never see you and know you only by the wording and appearance of the literature you send them.

ARTISTIC PRINTING AT LOW PRICES

ENVELOPES, LETTER *and* NOTE-HEADS, CARDS, CIRCULARS

FOLDERS, BOOKLETS

We furnish FREE Standard Poultry Cuts for all printed matter. We prepay the express charges.

VOL. XXXVIII NEW YORK CITY, SEPTEMBER 15, 1908 No. 711

American Market Duck Culture

By THEO F. JAGER.

IN the growing of ducklings right, lies the key to future success. The aim at all large plants is to have back of the ducklings a healthy unrelated line of quick growing ancestors, this in itself will cause the battle to be half won, and to furnish the little fellows with the right heat from the beginning and with the right food as soon as they have digested the yolk, their mother's food. The heat is generally supplied through over head hot water pipes, which get their charge from the heater placed in a cellar or basement adjoining the brooder house or below the feed room, often built in the middle of long houses. The electric heat regulators now on the market are perfectly dependable and will hold the heat in the brooders within a few degrees. On small plants or where a beginner is not feeling the necessity of going into the business on a larger scale, small brooders—indoor brooders—may be used to advantage for the first week and until the ducks have learned to know the source of heat and how to get there. A double brooding house is found to be the most advantageous as its erection will cost less if compared to a single row house and it will at the same time save many a step in taking care of the crop. It should face with its two fronts to the East and West. This will bring the mid-summer sun at its height, sending its hot rays along the ridge of the roof and any breeze that stirs from either East or West will afford comfort to the ducklings lying in the inside pens in the shade. Excessive heat is just as much, if not more to be dreaded as cold; ducks heavily forced and covered with a fat lining to their entire body, fall down quickly in the hot sun rays and succumb easily to sun stroke.

The pens inside should be graded in their heights, that the younger birds are nearer the source of heat—the pipes—than older ones. It is a good plan to have the birds just able to touch the pipes with their heads extended. The rule often applied to chicks in brooders, that some of them must stick their heads out from underneath the curtain, is a safe one here. If the ducklings are well scattered over the entire bottom of the hover space the heat is right. Ducklings can stand more crowding than chicks, especially if the heat is never low and one may place as many as 100 in one flock, although, of course, better individual care and a chance to get around is had if one half that number is placed together. Ducklings just hatched are foolish and must be taught their new home. They are apt to stray away from the pipes and loose their way back and get chilled, if not restrained by placing a ten-inch board crossways in the pen, allowing them for a beginning only about twelve inches of space outside the hover. If a couple of strips are nailed on the boards dividing the pens, these confining boards can be placed or removed quickly.

The feeding of the ducklings should begin at the end of the second day. Five meals per day must be given until the birds are five or six days old, when four feeds will suffice. Feed as early in the morning and as late at night as possible and have the other meals well spaced in between. The general rule for four meals is, 6 A. M., 10 A. M., 2 P. M. and 6 P. M. During the long summer days we would extend this time either way one hour, as the night is long and the appetite for the third and fourth meal would be better, if a longer interval elapses between them.

The pioneers of duck culture vary somewhat in their modes of feeding, but as all have had good results with their respective modes, we deem it best to cite a few bills of fare, leaving it to the beginner to select the one that appeals to his own liking. A caution is, however, not out of place here to stick to whatever method is selected and not to mix the ingredients of one or more methods together, as they are—as given—well balanced. Give sand or fine grit to all feeds during the first week.

McFetridge uses for the first week, equal portions of cornmeal, middling and bran, a little grit and mixes thoroughly first dry and then with water to a damp mash. It must be crumbly, not sticky.

Second Week: One and one-half measure corn meal, one measure middlings, one of bran, one-eight beef scrap, one measure roasted bread and one-half measure green rye or clover.

Third Week: Two measures corn meal, one-half bran, one-half middlings, one-sixth scrap and one green food.

Fourth Week: Two measures corn meal, one and onehalf bran, one-half middlings, one-half scraps and one and one-half greens.

Fifth Week: The same, only two measures of green food.

Sixth Week: The same, only three-fourth measures of scrap.

Seventh Week: Three measures corn meal, one bran, one-half middlings, or just enough to make the food binding; one measure of scraps and two measures of green food.

Eight Week: Leave out the bran and add corn meal, as this mixture will color the carcass up.

It will be noticed that the corn meal proportion is increased all the time until the birds are ready for the market. Corn meal is the only ingredient that will do the fattening cheaply and right. To any one that can procure cheap crackers or stale bread, it may be of value to add a little of same to all rations up to the sixth week. Oat meal, often offered very low, after the weavels have attacked the barrels containing same, is a fine food to add to the rations of the first three weeks. Boiled potatoes or any vegetables whatsoever are good added to the rations of the third to seventh week.

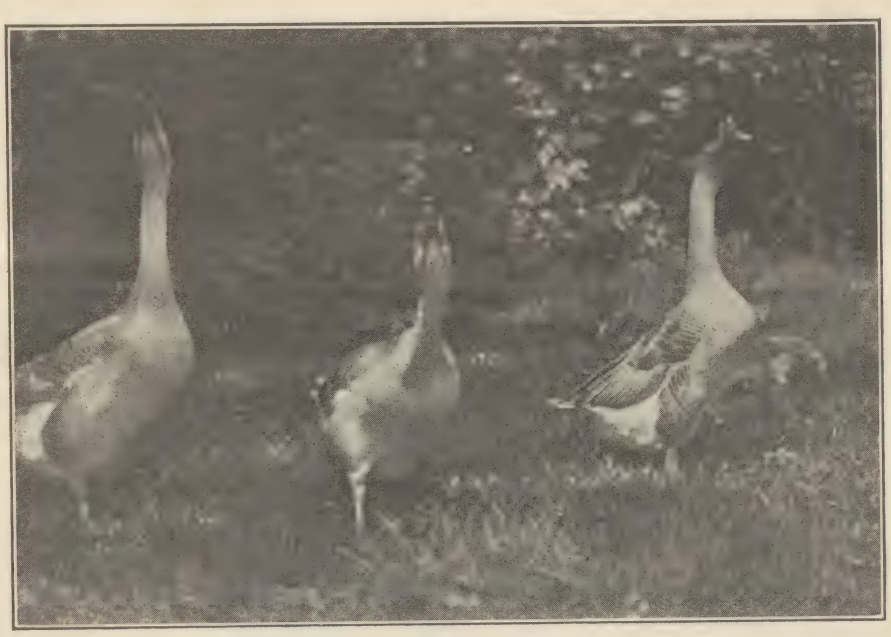
Weber Brothers, the great Wrentham duckmen, use equal parts of corn meal, bran, flour, graham bread and rolled oats, 5% beef scrap, a little oyster shells and grit and a little finely cut green rye for a start. They feed this five times daily up to three weeks, after that they use two parts cornmeal, one bran, one middlings, 10% beef scrap, a little oyster shells and fine cut green stuff. When the birds are six to seven weeks old, they place them on a fattening ration composed largely out of corn meal.

The methods of A. J. Hallock, who made the Atlantic Farm a by-word to all that is good in the line of market ducks, are specially imbedded in my mind, as I had the rare good fortune to learn from him and on his plant during the course of two seasons all the ins and outs of the business, are as follows:

First Week: Equal parts of corn meal, middlings, crackers, or stale bread and green stuff. The green stuff is mainly composed of the long eel grass that the boys take with wide rakes from the bottoms of the two adjoining creeks and the near bay. It is an excellent duck feed, easily cut up with a sharpened spade and aids greatly in promoting digestion and an always ready appetite. To each quart of the food is added a handful of fine sand, also found in abundance on the shores of the inlet bay. Once in a while bread soaked in milk is given for an extra appetizer.

Second Week: Four parts corn meal, two bran, two middlings, one scrap—and none but the very best is used—sand, mixed with about one-third the quantity of green food. At about six or seven weeks of age the ducks are placed on the fatting rations, composed of two-thirds corn meal, the balance being equal proportions of bran, middlings and greens. About 12% of scrap is furnished now.

Pollard, who created a stir some years ago by raising thousands of ducks on a small tract of land, gave the following directions:



Two parts wheat bran, one part meal, with a handful of fine gravel or sand thrown in, mixed with either hot or cold water, or with skim milk, to a crumbly consistency. Frequently break raw eggs into the grain in the proportion of two eggs to one quart of the dry grain. This must be thoroughly mixed that it may not be pasty or sticky. After the first three days omit the sand or gravel, and by the fifth day begin to feed a slight proportion of beef scrap, increasing gradually until at two weeks of age they are getting 5% beef scrap. Gradually increase the animal matter until at five weeks of age the ducks are getting 15% of it, which proportion may be continued until killing time.

Regarding the treatment of young ducks, he advises, to cover floor under hover with chaff, or fine shavings, and in front of hover for two or three feet with fine sand or gravel. Six or eight inches in front of hover small troughs or dishes should be placed—I personally prefer boards, that the ducks can walk all over it and get right next to the feed and learn how to eat—containing the food, slightly sprinkled with fine sand for the first feeding or two. Summer, warm water can be given in small fountains or in dishes, that contain a large number of pebbles, that the birds cannot dish all the water out or get into it. They will find enough to drink and to wet their bills from the spaces between the pebbles.

After all this, simply keep the ducklings warm and nature will do the rest. Beyond watching for the first few hours, that none get away from the heat and the hover and become chilled, do not fuss with them and do not try to fill them with boiled eggs and bread crumbs.

Mr. Moss, formerly the great ducklight of Missouri, who made the great middle West value ducks, as exemplified by the way Kansas City took to them says: The nursery feed consists of one measure of cracker or stale bread crumbs, one measue of middlings, one-half measure of bran, 5% of grit, wet with water or milk to a dry crumbly state. Keep hands off boiled eggs. I fail to see why anyone should recommend them, unless they assume that because the yolk is the first food sup-

(Continued on next page.)

THE GRACEFUL BROWN CHINA

Often called the swan of the goose family, the China goose, and especially the brown variety, well deserves the name. She shows the elegance of the swan without that bird's rather quarrelsome disposition. The swan, as far as food consumption is concerned, has been likened to a bag without a bottom that cannot give a return to anyways near pay for all that is devoured. The China goose, on the other hand, in delighting our eye with her swan-like grace and curves and girations on the water, is far from being an expensive scenic luxury. As layer of plenty of strongly fertilized eggs, as mother of quickly growing and fattening goslings, the old will satisfy our desires, as the young in the shape of a very palatable roast will tickle the most jaded appetite.

The picture shows three different poses of the goose, in which the grown birds delight to show themselves. On the far left, the bird, a gander, is calling the note of warning, a high shrill sound, while his neck is extended to its full length, straight up in the air. The bird in the center is preparing to go for the man with the camera and just began to lower its head to the ground while chasing him. On the extreme right we have the goose in her natural standing position, body rather erect, breast deep and full and pushed forward, head erect on the extended neck. The picture may be considered a happy one in getting the three prominent poses of the tribe as exemplified by three adult members on one plate.

(Continued from preceding page.)

plied by nature to start them in life, that the entire egg boiled hard must be an ideal food. There is a vast difference between the digestibility of a raw yolk and the hard boiled albumen and yolk. The one can be eaten safely by an invalid, while the other might kill him. Keep it away from the ducklings. This strong assertion, although perfectly right and true, was caused, no doubt, by the advice given at one time by a Mr. Newman, who had formerly the best trade on Staten Island. Said he: The first eight or ten hours after coming out of the shell, they receive no food, then I gave them hard boiled eggs. The ones tested out are good enough for this purpose. Mix this up with a little corn meal and fine bran. For the first week give light food, consisting of potatoes, turnips, beets, cabbage, etc., green rye, clover and green corn, which has been sown in drills and cut with a cutting machine. These should be mixed with stale bread and beef scraps. Mix dry wet.

Comments on the above rations are not necessary, beyond the fact that I cannot endorse Newman's method and am inclined to favor Hallock's.

Specialty Clubs

By HENRY R. INGALLS

THE fancy poultry business is a hobby with many and it should be with all. By this we mean that true fanciers should be in the business for the love of it and not for cash. When one can combine a fancy and a money-making business without resort to commercialism, that is all right, but when one masquerades as a fancier and then works the game for what can be gotten out of it, he is not a true fancier. Fanciers like to help each other by co-operation in breeding and by exchanging ideas and all that sort of thing. They like to band together for the common good and to advance the interests of the breed of fowls that they are interested in and from this idea has sprung the Specialty Club, which is a mighty good thing for all concerned. It is a notable fact that there is no popular variety but what has a strong club behind it. Those varieties having the strongest clubs are the most popular. Did the club cause the breed to be popular or because it is a popular variety its club naturally grows and flourishes in connection with the breed's growth in public favor, very likely it works both ways, as the most popular breeds have the largest clubs. On the other hand some of those varieties least in public favor may have a club which, according to the number who breed that variety is larger and stronger than some of the clubs backing the so-called popular varieties. In other words, it is not numbers that make a successful club, but the quality of the fanciers who belong.

It is easy enough to be a fancier when you have a breed that is in demand and you can sell all you can raise without much effort, but for the true fancier you have to look among those breeders who have bred some old and not very popular variety for years. Here you find fanciers, men who love their breed and their birds, men who do not care or expect to get rich out of it—they are fanciers for the fancy's sake. Such men are good timber for the Specialty Club. Specialty Clubs are a good thing for the fancy if they are properly conducted; they soon go to pieces if not properly run, so to have a strong club it must be cared for by men who are unselfish and willing to work for the good of the cause. The mission of the Specialty Club is, first and foremost, the advertising of the breed it represents. This is done largely through the medium of club publications which are widely distributed, club specials at the shows—these create interest in more ways than one. Although the prize given may be of small value in itself it represents something of which the winner can be proud and we find many fanciers join the club just for the sake of getting the club specials. Fine silver cups are given by the clubs and often larger amounts of good, hard cash are also given. The wider the club can distribute its specials the better it is for it, and the greater the interest in it and its breed. Really, a show without a lot of club ribbons and specials is rather a tame affair, to my notion.

Consider for a monent, the great amount of interest in the fancy that comes from club activity and this is one point that members of all clubs should bear in mind: Do all you can to help your club, for in doing this you are helping create an interest in the fancy in general, and that means more business, also more competition in the shows and a better fellowship among fanciers.

A membership in a club gives a fancier a standing that he can get in no other way, and the longer one belongs to his club the better this standing becomes.

It is the part of the club to see that none but good and reliable men are admitted to membership and then require of them that they do business on the square. That is one reason why the public should deal with club members, if they do not deal squarely it can be put up to the officers of the club to make them make the deal satisfactory. There is a difference between real fraud on the part of a breeder and a difference of opinion between buyer and seller.

Then there is the social side of the club. It is one of the best things about it. I have found that fellow club members have a fraternal feeling and are always ready and willing to extend a warm welcome and a helping hand to a fellow member; thus if one visits a show he is sure to find there some fellow club members and a good time is the result. We should see to it that the social side of our club is made the best part of it. Do all you can to entertain your fellow members if they happen your way and they will be more than pleased to do the same by you when you happen their way. See to it that the social side of the club is made its most prominent point.

The success of any club depends upon the honesty and unselfishness of its officers and the wide-awake interest of its members. The officers of the club should never do anything in the way of getting or trying to get anything out of it for themselves, for if they do the club goes to smash for the reason that the members seem to think the officers are trying to get all the benefits. Members, on their parts, should work for the club and not leave it all for the officers to do. The secretary of a club can do nothing without the co-operation of all the members, and it is up to them to make their club a success. No one man can make a specialty club—it requires the united efforts of many men.

So again I say to all true fanciers, join the specialty club, work for it and take an active interest in it all the time. Give the secretary prompt support in all things and you will directly and indirectly reap many benefits. The specialty club has come to stay, and if one is ruined by poor management another will take its place, for fanciers see the importance of a strong club and they will do all they can to keep one going as it should. It has become a necessity in the life of the fancy in this country and long may it live and prosper.

REV. C. E. PETERSON AND HIS LITTLE GIRL THELMA.
Rev. Peterson has been on our regular staff of contributors for about a year. From 1900 to 1907 he was President of the American Houdan Club.

There is one habit to which ducklings of four or five weeks old are addicted, and that is feather-eating, says Feathered Life. First, the down will begin to disappear from their backs; next, as the birds grow older, the quills which grow out from the end of the wings are all exposed for tempting morsels. These quills bleed profusely when disturbed, which, of course, seriously retards the growth and progress of the birds. This vice should be checked at once, for vice it is—superinduced by idleness and close confinement. When the first indications of these troubles appear, the attendant should watch the birds closely for a few moments, when the aggressors can soon be detected. They should be removed at once and confined by themselves, or placed in yards with older birds already feathered out, which affords them no temptation to practise this newly acquired art. If this is not done at once the vice becomes general, and disastrous consequences are sure to follow. If it has already attained headway, before the novice detects it, he must change them to new quarters; a grassy area is best, where they usually forget all about it.

* * *

Mr. G. A. Bell, ,assistant animal husbandman of the Bureau of Animal Industry, U. S. Dept. of Agricultural, classifies chickens as follows:

The egg breeds include the small or medium-sized fowls which the very active, quick to mature, producers of white-shelled eggs, usually nonsitters or at best but poor sitters, and rather poor mothers. The various varieties of Leghorns and Minorcas are good representatives of this class. Because they are poor sitters some other breed, or at least a few other fowls, should be kept if natural methods of incubation are to be employed. On account of their early maturity it is not uncommon for individuals to begin laying at the age of four and one-half months. As mentioned above, these breeds are very active and do not fatten as readily under ordinary conditions as the larger and less active breeds. The fowls of this class have large combs and wattles, which make them rather sensitive to low temperatures.

MEAT BREEDS.—The largest fowls are represented in this class, and these breeds are especially suitable for the production of large roasters. They are slow and somewhat sluggish in movement, with little desire for foraging, easily confined by low fences, rather slow to mature, persistent sitters, and rather indifferent layers of large brown-shelled eggs. Many poultrymen, however, are getting very good egg yields from them. The Brahmas, Cochins, and Langshans may be mentioned as belonging to this class.

* * *

GENERAL-PURPOSE BREEDS.—This class includes fowls which are of fair size and which will also produce a good quantity of brown-shelled eggs, making them especially adapted to the person wishing a supply of both eggs and meat. As one has to make frequent sales of flesh in the shape of surplus cockerels and hens, the carcass as well as egg production should be considered. The general-purpose breeds are usually good sitters and good mothers. They have medium-sized combs and wattles and endure cold weather well. They occupy a medium position between the egg and meat breeds as to size, egg production, and docility. The Plymouth Rocks, Wyandottes, Orpingtons, and Rhode Island Reds are good representatives of this class.

* * *

ORNAMENTAL BREEDS.—As a rule the breeds in this class are not so well adapted for farm purposes as are the breeds of the other three classes. The Polish, Exhibition Games, Silkies, Sultans, Frizzles, and Bantams are representative ornamental breeds.

* * *

Poultry and eggs have taken rank among the important farm and villagelot products, says "Farm and Stock Journal." Farmers and villagers are finding out as never before the possibilities in poultry keeping. They are learning by practical experience that purebred poultry gives the most satisfactory results and that with good care and attention no line of farming gives beter returns than poultry and egg production.

The market for poultry products is constantly enlarging, necessitating a substantial development of the industry.

Farmers and village residents who have not already replaced the mongrels with purebreds should start this spring with well-bred fowls of the breed best suited to their market demands. With a paper in the home which devotes much attention to the practical or utility side of the business they should not fail of success far greater than could be attained with fowls of mongrel breeding.

* * *

If you have had an unsatisfactory hatch do not write the breeder a mean letter, but consider whether or not you might be at fault. If you receive a complaint from a customer do not ignore it or refuse to consider it until you are sure that the eggs sent him were produced under circumstances which should have made them fertile and capable of hatching vigorous healthy chicks.

* * *

An expert lays down the following rule for telling the age of eggs: Take an egg carefully between the thumb and the forefinger of the left hand, carry it to the further end of the back yard, look carefully around to see that no one is watching you, tap the egg gently with a knife or other edged instrument held in the right hand, and jump back with alacrity. Then take the others one at a time, and try them in a like manner. After a little practice a quick ear can detect the differnce in sound. The one that pops the loudest is the oldest egg.

Bred and owned by Westlook Farm, East Norwich, L. I., N. Y.

A Big Show Promised at Corfu, N. Y

The annual meeting of the Corfu Fanciers Club was recently held and the following officers elected: President, H. E. Stevens; Vice-President, I. M. Nye; Recording Secretary, Garret R. Colby; Corresponding Secretary and Treasurer, Emory E. Banks (East Pembroke, N. Y.); Superintendent, Carl E. Nye; Executive Committee, H. E. Stevens, Garret R. Colby, H. M. Holmes, Chas. O. Phelps, Frank Smith. The club will hold its sixth annual poultry, pigeon and pet stock show January 19th to 22d, 1909 inclusive. Mr. George W. Webb of Rochester, N. Y., has already been engaged as one of the judges. The five preceding exhibitions have all been very successful, but the coming show gives promise to eclipse anything that has yet taken place. More and better premiums will be offered and the men behind the "push" intend to make the Corfu show one of the leading Winter poultry shows of the State.

* * *

Guinea fowl, sometimes called guinea keets, are probably natives of the west coast of Africa. In Jamaica, in some of the Lesser Antilles, and also in the Cape Verde Islands, they have gone back to their wild state and are hunted in their season as game birds. Large flocks are sometimes kept in game preserves in England, where they are also hunted as game birds. There are several varieties of wild birds known as guinea fowl in Africa, among the most striking the vulturine royal guinea, which is noted for its beautiful plumage and is seldom raised in captivity. European writers and epicures consider the eggs of the guinea hen a great delicacy, with a rich flavor resembling that of the much prized plovers' eggs. The delicate flavor is especially noticeable in the yolk, and the eggs are regarded by many as very delicious when eaten cold with aspic jelly or other relish.

With southern cooks the belief is quite generally held that guinea eggs are superior for cake making and similar purposes, since the white is thought to be lighter when whipped than that of hens' eggs.

S. C. RHODE ISLAND COCK.

First as cockerel and first cock at Lenox, Mass. 1907 and 1908. Owned by Steve C. Burghardt, Interlaken, Mass.

It is supposed that our domesticated chicken is descended from the wild chicken, Gallus bankiva, says the Washington Post. The species originated or was first seen in India and the Philippines. This wild bird resembles the black-breasted red game and the brown leghorn. The hen lays from eleven to fifteen eggs and then wants to set, but if you continue to remove the eggs from her nest she will keep laying for several months. The cock bird moults twice a year. In the spring he sheds his feathers and then takes on the plumage color of the hen, and about September he moults again and dons his former plumage. The cock when confined to one mate makes an affectionate parent, and will hover the chicks, scratch and find food, and take care of them. He is pugnacious, and a vicious fighter, especially when necessary to protect his hen and the baby chicks. They become perfectly tame. Of this species a beautiful pair can be seen at the National Museum.

The domestic goose was brought over from Europe by the early settlers, and is not even related to the common wild goose of the United States; on the contrary, the quail and partridge of the Unied States are indigenous species. While many attempts have been made to introduce the European quail and partridges, these birds are still very rare.

A flock of Hamburghs at Shady Lawn Poultry Farm. B. F. Kahler, Proprietor, Hughesville, Penna

On the Pacific coast of the United States, especially in Oregon and Washington, several species of pheasants derived from Japan and China, and turned out to shift for themselves, have become very abundant. In the Eastern States many have also been introduced, but they have not become well established.

The Agricultural Department, by the direction of Congress, has regulated the introduction of birds into the United States, so that any species liable to become offensive to the farmer are not allowed to be imported. By this law some species that might do great damage are not even permitted to enter the ports of this country.

* * *

We invite our readers to send in articles on any or all subjects they are interested in. It is not necessary to write a world of words or follow any particular style in writing. What we want is facts briefly stated, with the signature of the writer attached to all communications. The value of an article in print in class publications is measured by the source it comes from. Real fanciers and practical poultrymen want to know who is authority for the statements that appear in print. A few paragraphs from a successful breeder, no matter how plain the style, will carry more weight than all the literary effusions of a theoretical and inexperienced fancier and breeder.

Bantam Briefs

By Jim.

DO not keep and feed any ordinary or inferior birds in order to, later on, sell them to the "Cheap Johns" who are certain to visit you, with that threadbare "gag," that he only wants a pair or two for his children, and after getting them, takes any amount of trouble to tell any fancier he meets that he has some bants from Brown's or Jones' best birds. It certainly does you and the varieties you breed, harm to sell them. As soon as they are large enough to broil, see to it that they *are broiled* and served on your table. They are good for your stomach and general health and are not scattered around the country to haunt and irritate you and cause you to make any explanations concerning their "dam"

Don't allow the later broods that are still in small coops on their run with, or without hens, to remain lousey for even a short time. Keep constant watch, or better still, at stated intervals go over them with some louse cure or preventitive. It is these little extra attentions that brings in extra reurns and causes your lazy, shiftless neighbor to be envious of your good luck (s).

Don't forget to look in the coops where your chicks sleep, after they have gone in for the night, to see that the chicks from some near by coop have not decided to change sleeping quarters and have crowded in with some other brood and thus too many are together.

If you do not take this trouble and precaution you will soon note the results in dead chicks being found in the coops, and by seeing droppy chicks and those with broken and soiled plumage runing around your yards.

Don't forget to arrange coops, particularly during these sultry nights, that fresh outside air may enter and the foul air escape if you want healthy chicks. We have our coops either with hinged tops or removable tops, and raise the cover or roof ½ to 1 inch by placing a small stick or pebble in under the edges.

Don't allow the growing chicks to learn to roost too young, and see to it that perches are at least 1½ inches wide for bants. Better compell Coachin bants to remain on a board bottom until nearly mature, instead of allowing them to roost.

Don't forget to keep the water vessels thoroughly cleansed these days. Use earthen or iron dishes if possible and never allow the drinking dishes to set in the sun. If you have no better shelter, turn an empty box on side or end with open side toward the north and set the drinking vessel in the box. If you have any "grey matter," use it.

* * *

September 7, 1908.

Messrs. Leonard W. Lott & Co.,

Dear Gentlemen—Enclosed please find adv. and check to cover four insertions. My adv. in your paper has paid me fine.

Respectfully yours,

L. G. Moore, V. S.

Bred and owned by F. H. Wells, Deer Park, N. Y.

To feed chicks on grains that they can utilize will give them an opportunity to scratch, which is beneficial to them. Screenings, cracked corn, broken rice, cracked wheat, millet seed, hemp seed and the refuse from the hay loft are excellent. These foods are not superior to cooked ground grain, but they afford an agreeable change, and compel the chicks to work and exercise. There is danger in feeding the chicks and allowing portions of the food to remain over, as it becomes sour and causes diseases. One good mess of milled food, in addition to cracked corn and wheat, given at night, is sufficient, as the meals during the day, after the chicks are a month old, should be substances which they should seek for later. Cornmeal is frequently given to chicks, and while it has been used for many decades, and found excellent, yet it should, and can be, improved. It is deficient in minteral matter, and does not provide lime for the bones of growing chicks. The cornmeal should always be scalded first, and fed as a stiff dough, or fed dry in a little trough—never on the ground. To one quart of cornmeal add a gill of linseed meal and one of ground meat, and teaspoonful of salt and bread soda mixe Then mix all the substances well before scalding or using. Preparation should be made now for the reception of the young chicks, as after they are hatched everything should be in readiness without waiting for them to hatch. The houses should be perfectly clean and free from lice, which can be accomplished by a generous spraying of the different preparations for that purpose, for if older fowls have been occupying the quarters which are intended for the young chicks after they are hatched there will be great losses from the ravages of lice. The houses should be warm and free from draughts. Runs should be provided, so that on sunny days they may be allowed to run out a little during the middle of the day. If incubators are to be used, then the brooders must be gotten ready, and if hens are to sit on the eggs the nests should be perfectly new and fresh, and kept clean, as long as they are used by the hens and their broods.

* * *

Too much food will unfavorably effect egg fertility; also, will too warm houses for laying fowl.

The State cups of the Rhode Island Red Club will be offered at the coming Utica show and will undoubtedly draw an extra large entry which will mean keen competition.

* * *

Prof. F. H. Stoneburn has been appointed to fill the vacancy at the Connecticut Agricultural College, which was caused by Mr. Graham leaving the college for another position.

* * *

The American Plymouth Rock Club will hold their meeting at Boston during the January show.

* * *

With September issue, *Poultrydom* enters the poultry publishing field with its initial number, and they have our best wishes for success. Stephen E. Banneck is the editor with publication office at Inglewood, Cal.

* * *

Thomas F. McGrery is now devoting his time to writing the poultry matter in the text books for the International Text Book Co., although he will continue to write for *The Feather.*

* * *

Marcus Morrow, in his editorial, writing for *Agricultural Advertising*, says that the outlook for the immediate future is brighter than it has been for any time since the flurry of October.

Mr. Faint-Heart has plucked up his courage and old Charlie-Afraid-of-His-Shadow is back in the running.

The business world moves again—not with buzzing hurrah of once-upon-a-time, but plenty fast.

The time for plunging is still in the future.

The time for aggressive action, along carefully thoughtout lines, is Now.

There is more money in this country than has been in many a long day. The man in cap and bells will not get it; the bunco man will not even discover its whereabout; the gambling business man will hardly be persuaded that there is any money left in the world.

But the careful advertiser, the man who studies conditions and plans a campaign on a safe and sane basis, has better opportunity to-day of reaping a rich harvest than at any time in recent years.

Only sound sense must govern his advertising. Guesswork must be cut out.

This is the year for sane and safe advertising.

* * *

Hudson, New York.

Judges G. Weed, W. J. Stanton, W. G. Graves and Charles H. Wells will place the awards at the coming show which will be from December 15 to 18. W. Tunnicliffe of Elizabethville, N. Y. has worked hard to make this show a great success, and indications are that it will be a show of both quantity and quality.

* * *

Peekskill, New York

Poultry, Pigeon and Pet Stock Association will hold its first annual exhibition November 2 to 7. Further information can be obtained from the Secretary, Albert E. Hartung.

* * *

Greenwich, Ohio.

The third annual show will be held from December 15 to 18. Premium list can be obtained from the Secretary, D. D. Washburn, after November 15th. Thomas S. Falkner will place the awards.

* * *

Worcester, Massachusetts

Will hold their annual poultry exhibition from January 7 to 11, and a premium list will shortly be ready and can be secured from the Secretary, W. H. Fitton, 42 Richmond avenue, Worcester, Mass. As this issue of THE AMERICAN FANCIER goes to press, we have received word from the New England Fair, held at Worchester, Mass., from September 7, which tells that it was a great success and the poultry exhibition was one of merit.

* * *

Payette, Idaho

Will hold their second annual show from December 16 to 19. Mr. Dibble is the Secretary of this association and the awards will be placed by H. H. Collier, Tacoma, Wash.

* * *

Herkimer, New York.

The Mohawk Valley Poultry Association will hold its fourth annual show in the Fox Opera House from January 6 to 9. Mr. E. M. Budlong is the President and A. G. Bouck the Secretary of this association.

* * *

Heuvelton, New York.

The third annual exhibition of the St. Lawrence Poultry Association will be held from January 19 to 22. E. A. George is the Secretary of this association, and the judging at the coming show will be done by Henry R. Ingalls.

* * *

Elkhardt, Indiana.

S. B. Lane will place the awards at the coming show which will be from January 4 to 9 by the Elkhart Poultry Association of which A. J. Felthouse if President; J. W. Hinman, Secretary, and C. A. Anderson, Superintendent.

* * *

That history repeats itself is the hope of many fanciers who intend to exhibit at the coming Madison Square Garden, and they are wondering who will make the largest sale. Last year many high priced sales were made in addition to the pen of White Orpingtons sold for $7,500 by Mr. Kellerstrass, and although the sale was not actually made within the Gardens, Mr. Kellerstrass's exhibition there was what first interested Madam Paderewska and the sale was made in Kansas City. Geo. Weed's winnings on Black Wyandottes caused a sale later on for $600. A. Anderson sold a pen of White Couchins for $500, and George W. Mitchel a pen of White Wyandottes for $500.

* * *

Meriden, Connecticut

Will hold their 17th exhibition in the Auditorium from December 29 to January 1. W. H. Gough is Secretary, and the judging will be done by W. H. Card and J. F. Crangle.

* * *

Van Wert, Ohio

Will hold their second annual exhibition from December 30 to January 2. The premium list, which will shortly be ready for distribution, can be obtained from the Secretary, R. P. Everly. S. T. Campbell will place the awards at the coming exhibition.

* * *

I find an article in the August 15th edition which reads as follows: "Perhaps the man who has been feeding his hens all Winter, forcing egg production, and then along in March sets hens, should expect trouble. Eggs from hens that have been thus forced contain many reasons for not hatching. When they do hatch, strong chicks should not be expected. You cannot force nature too fast. Strong chicks should not be expected from eggs laid in the Spring by hens that have been forced to produce Winter eggs also."

I wish to take exception to the above article, as my experience for the last few years has proved to my satisfaction that if hens that have moulted early, and early hatched pullets are well cared for, they can not help but lay, because they are healthy and it is to their nature to lay. Last Winter I had two pens of White Wyandottes. One pen had eight hens and pullets and the other twelve hens and pullets. In each pen I put an early hatched cockerel. They commenced to lay in September, but I kept no record till November. In November I got 201, December, 238; January, 332; February, 290; March, 315 April, 318—total, 1,694 in six months. I sold about 700 for hatching and got a good report from all except 50 that I sold to a gentleman in Philadelphia, Pa., and he says he blames the man who had charge of his incubaters, as he only got about 30 chicks out of 240 eggs. February 22nd I set two hens on eleven eggs each. They brought out 17 chicks and I raised 15 of them. April 15th I set one hen on 13 eggs and she brought out 12 chicks and I raised all of them. You see I got 46 chicks out of 57 eggs and raised 44 of them. I think this shows that the eggs were fertile and the fact that I raised 44 of the 46 shows that the chicks were strong. Some of my cockerels hatched March 14th will now, Aug. 22d, weigh five lbs. each. I sold a setting of 13 eggs to a neighbor and March 26th he got 9 chicks and raised seven of them, five cockerels and two pullets. August 12th one of his pullets commenced to lay.

My theory is that if the hens are in good condition and have comfortable quarters that they must lay and their eggs are more likely to produce strong healthy chicks than would eggs from hens that done nothing but eat and sleep till the warm Spring days puts enough life in them to lay a few eggs and then want to hatch.

Yours truly,

M. P. LUTZ.

Bloomsburg, Pa.

* * *

In answer to your request (on page 167, August 15th issue) for the experience of a breeder having a cock bird to take charge of a brood of chicks that were deserted by their mother, I can make the following statement:

This Spring I set a White Wyandotte on 13 eggs and in due time she hatched out 8 chicks, and on the sixth day following she laid an egg and the next day she started to pick the chicks, so I took her away and put and old White Wyandotte male that had not run with females for over three weeks.

He took charge of them right away and a good many people used to stop and look at him as he led them around and when he found a morsel to eat he would call them just like an old hen, then leaving them to fight over the worm or whatever it was, he would start off looking for more.

After bringing this brood up to the point where they were able to take care of themselves, I gave him fifteen chicks two weeks old and he took them and brooded them just as faithfully as he did the first eight.

I think is is a good idea to keep an old rooster on hand during the breeding season for just this purpose.

I have given chicks to roosters to brood a good many times, but I think that the male should be kept by himself at least three weeks before giving him any chicks, as I find that a rooster running with hens is very apt to kill little chicks if they go near him.

Respectfully yours,

WM. H. GOUGH.

Meriden, Conn.

Careful Selection is What Makes the Paying Flocks.

Very often we hear the complaint of the owner of a large flock of hens that they do not lay well. Upon investigating such a case it is generally found that there are some good hens in the flock and that they are laying, but there are as many more in the lot that do not lay, so the whole bunch is condemned on account of the part that are non-egg producers. A mistake that many make is in not culling the flock close enough. More care should be taken to retain only the profitable hens. A man who had just disposed of his incubators and brooders remarked to me recently "that he guessed some of these fellows who were going into the hen business would get enough of it after they had fed a lot of high priced grain to them all winter and got no eggs." It is the keeping of a lot of hens that are not worth the room they occupy that makes people disgusted with the poultry business. To be sure grain is high and that makes it all the more necessary that we should be careful about what quality of stock we keep over and feed this high priced grain to. Some attribute the cause of their not laying to the care and housing, others to the food and system of feeding. But the best of care and housing will not save you from a loss if you keep a non-productive lot of hens, and we all know very well that any system of feeding is expensive if the hens do not lay, and the greater the number of these non-layers the more cost is added to the eggs received. And it is a well-known fact also that there are many flocks from which no eggs at all are received for weeks and weeks in winter time. Among my flocks when I find birds that commenced to lay at a reasonably early age and have produced a fair number of eggs right along they are worked and kept until I am satisfied they are past their days of usefulness as layers and breeders. It is not so much the great number of eggs that I may get the last year from these hens, as it is their value as breeders. Eggs from these hens, with a well-bred male bird, are the kind I want for hatching purposes, to build up the next flock with and so on. And even with all the care that one may exercise in the selection of both males and females there will be some worthless pullets, and these should be disposed of just as soon as their characteristics are known.

V. M. COUCH.

The AMERICAN FANCIER

ESTABLISHED 1893.

A Magazine devoted to Standard-Bred Poultry and Pigeons.

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations.

Expirations—Paper is discontinued at completion of subscription term. If a subscriber wishes a subscription continued he must notify this office and send the amount in payment for same. Renewal should be made at once to avoid missing a number.

Change of Address—When writing to change address, the old one must be given as well as the new.

Published by

LEONARD W. LOTT & CO., :: :: 30 CHURCH STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

Rochester, New York

Will hold their annual poultry and pigeon show from January 11 to 16. The officers of the Genesee Valley Poultry and Pigeon Association are: Edward W. Weeks, President; Arthur G. Shilling, Vice-President; T. G. Beattie, Recording-Secretary; H. F. Hildebrandt, Treasurer; F. A. Newman Secretary, and C. W. Augenstein, Superintendent of Exhibition. This association has been very fortunate in securing for the coming show the City Convention Hall, a large building, 80x100 feet, and providing ample room and splendid light. The building is centrely located. The poultry institute and lecture conducted by Professors Rise and Tuch of New York State Agricultural College of Cornell University which proved a very interesting feature at the last show will again be one of the attractions offered. The following well-known judges have been secured to place the awards: G. W. Webb, M. S. Gardner, B. W. Mosher, H. R. Ingalls.

* * *

Hagerstown Fair

Offer a large assortment of elegant cups. The judges this year are: W. J. Stanton, J. O. Brown, J. H. Drevenstedt, William G. Minich, Eugene Sites, George Ewald, Louis P. Graham, John C. Krimer and Henry R. Rudy. With this list of judges, and W. F. Spahr as Secretary, and H. E. Backer, Superintendent, the success of the show is assured, and it is a great combination to draw an entry of quality.

* * *

New Berlin, New York.

The third annual show of the Unadilla Valley Poultry and Pet Stock Association will be held at New Berlin, N. Y., January 26-29. The management is putting forth every effort to make this the banner show of the season. There will be many reasons why you should exhibit here. There will be numerous silver cups and hundreds of other specials to be competed for. Judge, John D. Jaquins. Premium list will be out November 1. Send for copy. For further information address the Secretary, R. F. Talbot, New Berlin, N. Y.

Norristown, Pennsylvania.

The members of the Norristown Poultry, Pigeon and Pet Stock Association feel encouraged about the success of their first annual show, December 1st to 5th, 1908, because no other town for hundreds of miles around has announced those dates. They realize though that that will not bring the entries and are working hard to be able to offer a large and valuable lot of special premiums. Many fanciers from distant towns have signified their intention of showing at Norristown, and it's no wonder when they have such an expert judge, and all-round poultryman as Frank G. Bean, of Collegeville, Pa. as Superintendent, and have several other members who have enviable reputations as fanciers, such as Henry D. Riley, John W. Poley, Leslie Jefferies, A. J. Fell, F. W. DeSancey, and several "old timers" who have not forgotten what they knew years ago.

W. C. Denny of Rochester, N. Y., has been secured as judge, and another will soon be arranged for probably.

The premium list will be ready about October 20th, and a copy will gladly be sent for the asking, by the Secretary, Raymond Swab, Norristown, Pa.

Water Fowl Club of America.

Now that personal appeal has given this time honored club a good financial basis and a steadily increasing membership, I beg to ask the corporation of breeders in securing for water fowl at shows reasonable provisions, and judges of experience and of the press the dissemination of knowledge, of the revenue of producing value of ducks and geese of many kinds, particularly for the vast unproductive lowlands in all sections, also the edible and ornamental qualities of some little known varieties for gentlemen's estates. At a special meeting to be held at the New York State Fair at Syracuse, September 15th, at 3 o'clock, important far-reaching work will be started and state vice-presidents will be nominated. Two cups are already promised and specials of this kind are welcome, also any suggestions for the perfecting of the standard of excellence. Annual dues of $1.00 and nominations should be sent prior to the above meeting.

EDWIN H. MORRIS, Sec.

Sparkhill, N. Y.

P. S. If you have good, sharp photographs of water fowl, I can place them effectively.

Red Bank's First Fair.

Held by the Monmouth County Agricultural Fair Association, opened Friday, the 4th, and closed Labor Day. The officers of the association are: Col. Thomas J. O'Donahue, President; Dr. Edwin Field, First Vice-President; Melvin A. Rice, Second Vice-President; Edward W. Wise, Secretary; A. Percy Sherman, Assistant Secretary, and Charles W. Jones, Treasurer. There was only a limited time between the forming of the association and the opening day, and the officers and directors must have worked diligently, for this, their first fair, was superior in many ways to numerous ones that have been running regularly for two or three seasons.

The poultry exhibition, under the management of J. H. Drevenstedt had an entry of about 500 birds in new empire coops furnished by the New Jersey Poultry Association. The exhibition was one of quality and the awards were satisfactorily placed by Judge W. J. Stanton of New York. Thousands of people visited the poultry exhibition and among them were many "Chicken Cranks," including George Austin, manager of Sunnybrook Farm and W. F. Corey, manager of Rockhill Poultry Farm. John Brett was on hand and had to deliver many little instructive lectures and talks on pheasants and waterfowl to the inquiring public who were continually asking questions about the birds exhibited by Col. T. J. O'Donohue, who won the magnificent solid silver cup offered by W. F. Fotterall for the best display of pheasants.

Col. T. J. O'Donohue, the proprietor of Meadowbrook Farm and President of the Monmouth County Agricultural Association, captured, in addition to many poultry premiums, several handsome cups with his horses, as did the Second Vice-President, Mr. Melvin A. Rice, proprietor of Dynoch Farm, who showed a good string of poultry and cattle.

Mr. and Mrs. F. W. Summers of Elizabeth, visited the exhibition and had the satisfaction of seeing their White Wyandottes win a goodly share of blue ribbons. Although Mr. W. F. Fotterall, of Oxford, Pa., came to judge some of the horses, he spent considerable time with the poultrymen and had to leave Sunday morning on account of going to Hartford, Conn. to judge horses at their Agricultural Fair. Charles Kahler won the President's cup for the largest and best display, having 60 entries. He also won many other premiums on individual birds. "Al." Schroeder captured nearly all the ribbons and the silver cup with his Bard Plymouth Rocks that are so high in quality that they will cause many of the big breeders to sit up and take notice at the coming Madison Square exhibition where Schroeder, we hope, will enter his Red Bank winners. George Van Brunt won the silver cup with his Black-Reds. E. H. Wilber, C. F. Schwenker and J. Courtney Punderford also exhibited birds of quality which received many awards.

* * *

Awards

BARRED PLYMOUTH ROCKS—Cock 1, H. Wilber; 2, A. Schroeder; 3, Hillcrest Farm. Hen 1, 3, A. Schroeder; 2, Hillcrest Farm. Ckl. 1, 3, A. Schroeder; 2, C. Keeler. Pullet 1, 2, A. Schroeder; 3, Wilber.

ENGLISH HENNIES—Cock 1, Hen 1-2, Mrs. F. C. Wilson.

Pouters are a variety which have improved during the past few years, and are gradually regaining their place at top of the fancy. During the past season quite a few typical specimens have been imported. Mr. George Ewald brought over in April some 99 which should add greatly to the strength of the exhibits this coming season.

The Pouter entry at some of the leading shows during the last four years has been conspicuous by their absence.

The deck-sweeping career of one had a most disastrous effect, but we hope the coming season will have the same activity in the Pouter alley as a few years past.

Red Dragoon "Colonel," owned by H. and J. G. Smith, Syracuse, N. Y.

It is a remarkable fact that, notwithstanding the large number of people who breed Pouters, there are very few who really know a good bird when they see one, and still less number who understand how to breed one. Most of the celebrities of the day having come into life more by accident than judgment. In mating for breeding, the early history of the parents should be known, in order that some idea may be formed as to the color and markings that may be expected, for Pouters don't always reproduce their off-springs the same color that they are themselves, and as to markings, a pair which are perfectly, only occasionally produce one like themselves, unless they have been bred from correctly marked birds for several generations, and this is seldom the case.

Pouters have a tendency to produce too much white, more particularly on the pinion, it is therefore advisable that one of the parents should have only slight pinion markings.

* * *

Carl Wentzien has returned to Lakewood and will breed squab and poultry. He has just imported some very fine pigeons from Germany.

* * *

The Value of the Specialty Club.

What good will it do me to join a Specialty Club? This is a question often asked or perhaps we might put it. "Of what value is the Specialty Club?" Where can we find any good done by these clubs? We will first look to the annual exhibitions. Here are the Dragoons, Jacobins, Orientals, Fantails and many others—large exhibits of fine birds. Then we find a few Parlor Tumblers, Ice Pigeons, Nuns and other varieties. Why are there so few of this variety, and so many of another? You may say because there are more interested in one than another. Very true, but why? Simply because there is a live, wide-a-wake club back of that fine exhibition. Because those in that club are getting more fanciers interested in their pet variety, and each one added interests others, and so on. Is there a strong healthy club back of those birds with classes only partially filled? Perhaps you may find a club in name, but is there any interested members who are doing anything to help that club, except to show a few birds at one or two shows each year. I don't think you will find a case in which there is any general interest shown. This should be argument enough to show the value of a Specialty Club.

A. A. Ashley.

* * *

Pigeons in Canada

By J. V. McAree, Editor of *The Canadian Fancier.*

IF the Pigeon Fancy in Canada is not quite in its infancy it is still in its adolescence. The shows are few and, geographically speaking, far between. The people who keep pigeons are innumerable, but the fanciers, from a show point of view, are not common. Throughout Ontario perhaps three farmers out of four have a flock of nondescript "Gulls" flying about their barns, and in the large cities, notably in Toronto, with a population of 300,000, there are thousands of boys who keep a few birds. But going through the leading varieties I doubt if there are more than half a dozen keen fanciers to each. However, signs are not wanting of an improvement both in the quality of the birds kept and in the number of fanciers.

In Pouters, for instance, I very much doubt if there are two Old Country lofts that could set down more fine birds than could one Toronto fancier, Mr. Charles Wagner. He has Palace winners by the half-dozen, and when he wants a good bird, price will never stop him. Mr. Wagner must be reckoned the father of the Canadian Fancy, if not in years, then certainly in the interest he has taken in the hobby, the varieties he has kept, and the prices he has paid for his stock. So that, as far as Pouters are concerned, we have in Canada as good blood as the best, and with enthusiastic fanciers and intelligent handling we should be able to breed something fit to send back again to England. As a matter of fact, Mr. Wagner has already exported some Pouters, the first in a great many years, I dare say, that have been imported by the Old Country.

(Continued in next issue.)

ORIENTAL FRILLS AND MAGPIES :: **Wm. Ehinger**

THREE CLASSES OF READERS:

The Beginner, The Commercial Breeder, The Fancier—Combined they make the right kind of circulation for a poultry magazine.

A PAPER for the Beginner and Commercial Breeder will *not* interest the Fancier, but a Fancier's Paper *will* greatly interest every Beginner and Commercial Breeder. For years the AMERICAN FANCIER has been subscribed for by the largest breeders and leading exhibitors. It has been known as the Fanciers' Paper and will continue to be in the future as in the past, but its field has been enlarged by including the beginner without detracting from the Fancier.

We worked numerous subscription campaigns and the result gives a wonderful expansion for now as subscribers we have three classes of poultrymen: The Beginner, the Commercial Breeder and our old support, the Fanciers, many of whom are wealthy men who breed merely for pleasure and who subscribe to our paper only. They are big spenders and if the quality of the stock offered is worthy of their attention, we know of no better place to advertise it than THE AMERICAN FANCIER.

Our circulation contains the old and the new blood, thereby making it a valuable advertising medium. Subscribers are in every state in the Union and Canada; also Europe, Australia and South America. Anything for the Beginner, Commercial Breeder and Fancier can be profitably advertised in our columns.

While many of our subscribers read other poultry papers we have thousands who do not and the only way they can be reached is through the advertising columns of THE AMERICAN FANCIER. Entirely different from other Poultry Papers. It is in a class by itself.

COCHINS

LARGE, HEAVILY FEATHERED BUFF Cochins—have won wherever shown. 2d Cockerel, 1st, 2d and 3d Pullets, Rochester; 1st Cockerel, Auburn, 1908. All kinds of imported fancy Pigeons—Silver Cup winners. Stock and eggs at all times. Jones & Voss, Ernest Geo. Jones, 205 East Ave., John Voss, 54 Second St., Rochester, N. Y.

DOGS

FOR SALE—HUNTING, SPORTING AND Pet Dogs of every description. Beagles, Fox Hounds, Setters, Pointers, Collies, Bull Dogs, and Terriers, Ferrets, Rabbits, Pigeons, Guinea Pigs. And we have young and grown stock for sale, and trained stock. Send 10 cents for 40-page descriptive catalogue. Brown Beagle Kennels, York, Pa.

WYANDOTTES

GOLDEN WYANDOTTES — BRUNDAGE Goldens are the undisputed champions of the world. Winning Championship Cup three years in succession at Madison Square Garden. All Wyandottes competing. And making record never before attained by any Wyandotte breeder in the world. Winning 1907—two shows—1-2-3-4 Cocks, 1-2-3-4 hens, 1-2-3-5 cockerel, 1-2-3-4-5 pullet, 1-2 breeding pen. We are the largest breeders of Golden Wyandottes in the world. Free range on fourteen different farms. Hundreds of fine birds for sale. Is the best too good for you? Come to headquarters. Satisfaction guaranteed. Brundage Wyandotte Farm, Charles Brundage, Mgr., Danbury, Conn. 695-Tf

WINNING WHITE WYANDOTTES—HAVing purchased the entire stock of Joseph Prue, of Rochester, N. Y., which includes all his winners and all young stock raised this season, we desire to call your attention to the fact that we can furnish you anything you need. G. R. Colby, Corfu, New York. Tf-notice

BUFF WYANDOTTES EXCLUSIVELY. To make room for young stock will sell 4 good cocks and hens cheap. These birds will come in good for the Fall fairs; also a few cockerels and Pullets after Aug. 15th. C. W. Augenstein, 99 Weldon St., Rochester, N. Y.

WORKING EXHIBITION BUFF WYANdottes. Two hens $1.25; both $3.75. Hen $1.50; two yearlings $2; both $3.75; whole lot $7.50, or, express prepaid within 500-mile radius, $8.75. Are all healthy, good layers and good color, from solid buff stock. Write your wants. Eyriemaere Yards, 1301 E. Wayne St., Ft. Wayne, Ind.

BUFF WYANDOTTES SALE—FORTY OF the females from my this year's breeding pens for sale to make room for young stock. This is your opportunity to get some good breeders cheap. J. H. Scott, Auburn, N. Y., R. D. 9.

HALPIN'S WHITE WYANDOTTES ARE frost proof layers, therefore they are great profit layers. They have won again at the great Rochester Show. I put this in the Fancier so you could know eggs are $1.50 per 15. Send for circular. E. M. Halpin, Mortimer, N. Y.

COLUMBIAN WYANDOTTES EXCLUsively At Rochester, N. Y. Shows of '07 and '08 won seven first, second and third prizes and all specials. No better Columbians obtainable. Eggs in season. L. C. Pope, 270 Alexander St., Rochester, N. Y.

SILVER AND GOLDEN LACED WYANdottes. Both stock and eggs; an old established strain, line bred 15 years; are unequaled in the show room or as layers of large, brown eggs; large, vigorous birds; true Wyandotte shape; satisfaction guaranteed; Eggs, $3.00 per set; stock a matter of correspondence. Joseph L. Shull, Gloversville, N. Y.

GEO. COOKINGHAM, PHILMONT, N. Y. Breeder of Columbian Wyandottes; winners wherever shown. At the recent Hudson, N. Y. Show, with one entry won first pen fowls, while many birds of my breeding won at the same shows in the hands of my customers; can sell good breeders; Eggs, $3.00 per setting.

WHITE WYANDOTTE EGGS FOR hatching from my Rochester winner, $5.00 per setting; orders booked now when a small deposit is made; twenty-five head of White Wyandotte Hens, twenty-five White Wyandotte pullets and twenty White Leghorn Hens for sale; if not satisfactory, money paid refunded, less express charges. Edw. F. Greth, Niagara and Oneail Street, Buffalo, N. Y.

OUR BUFF WYANDOTTES HAVE WON at some of the largest shows in several states this season, also at the great Montreal, Que. show. 1908 catalogue, the most complete booklet ever published by breeders of this grand variety will be mailed free to any address. C. F. Smithers & Co., Heuvelton, N. Y.

BUFF WYANDOTTE COCKERELS AT half their value to immediate buyers; sired by 1st Cockerel at Pittsburg and 2d Cock at Buffalo; eggs from two grand pens that will produce you winners at $2 per 13; $5 per 45; order at once. B. L. Waite, West Valley, N. Y.

OAKVALE YARDS — WINNINGS AT Auburn, 1908, Columbians—4 firsts, 1 second, 5 Specials. Buffs—1st Cockerel and Colored Special (one entry). Our Buff and Columbian Wyandottes have also won more firsts than all competitors combined at Holyoke, Mass., Gouverneur and Heuvelton; mating list. E. S. Wilson, So. Hammond, N. Y.

COLUMBIAN AND WHITE WYANdottes. Eggs from our Blue Ribbon Winners at great Rochester Show of 1907 and 1908 at one-half price from May 15th. Handsome catalogue and mating list free. High quality stock for sale. Satisfaction guaranteed. L. B. Sweet, Perry, N. Y.

FELL'S WHITE WYANDOTTES. HAVE won the $100 Challenge Cup at Scranton two years in succession. Five firsts at Wilmington, Del., two silver cups. Eggs from the four best pens ever put together, now $2 per 15; $5 per 45. Special sale of yearlings now on. A. J. Fell, Box A., West Point, Pa.

WYANDOTTES — IDEAL IN SHAPE, pure in color—the stay-white kind. A combination of show winners and egg producers. A few breeders for sale at $1.25 each. Some grand cockerels. I will sell you Wyandottes that will please you and send them on approval. After June 1st eggs at half price. Mrs. H. A. McClintock, Livonia, N. Y.

BUFF WYANDOTTES—TWENTY HIGH grade hens to sell for moderate prices. 50 good breeding hens and pullets for $2 each. One solid buff male for $12. My "Guide to Breeding Good Buffs," postpaid, 25 cents. Catalogue for the asking. Dr. W. N. Sanborn, Box 866, Bellingham, Mass.

WOULD YOU BUY SOME WHITE OR Buff Wyandottes, if you knew you could get just what you want? I have some good ones that will be sold for about half their real value to a quick buyer, to make room for youngsters; write and be convinced. W. G. Hale, Batsto, N. J.

FEED TEN CENTS PER BUSHEL

PATENT PENDING

Is your main feed for growing chicks and making eggs costing you more than 10 to 15 cents per bushel? Have you raised 95 per cent of all chicks hatched this season? Can you care for 2000 layers and raise 3000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how I do it. My new book, **"Profits in Poultry Keeping Solved,"** will tell you how to do it, as well as save you $25 on every 100 chicks you grow to maturity. My third edition of 5000 copies now ready. 3000 Single Comb White Leghorns and White Wyandotte chicks growing under my new system for the fall trade. :: :: :: ::

Write to-day for free circulars and testimonials. :: :: :: Address

EDGAR BRIGGS
BOX 10
PLEASANT VALLEY, N. Y.

McKeesport, Pennsylvania.

The McKeesport Poultry and Pet Stock Association will hold their exhibition from December 7 to 12. C. E. Long is President; F. O. Rhodes, Treasurer; Harry Myers, Superintendent, and B. A. Boove, Secretary. Write him for a premium list and he will mail one just as soon as they are printed.

There should be no such thing as wild domestic fowls. What makes fowls, any breed, so scary or wild is the way they have been cared for. Leghorns are a breed that are active, always lively, and ready to forage for food. Some people say they are nervous. Well, we have seen some flocks that were nervous—but the way they were handled (cared for), would have crazed wooden decoy ducks. We have seen women keeping Brown and White Leghorns that had them so tame they could pick up any bird at will.

* * *

Progress in poultry raising—well, I guess so, when you hear farmers discussing about incubators, and are as "glib" on the subject as they are about farm crops. Some farmers are "getting on" to poultry raising in a great way. At a recent farmers' club meeting in this State a woman declared that she had made more money from her small flock of fowls than from their dairy cows. Instead of pin money or grocery supplies the returns from the fowls becomes a handsome income of profit.

* * *

Do not take chicks away from the mother when just hatched as they need the warmth of her body.

A wash of chlorate of potash in vinegar is good for canker sores in the throat and mouths of chickens.

If there is an unpleasant odor emanating from your chicken house, the house is neither clean nor healthful.

Compel others to purchase what you have to sell through their recognizing on sight that you have the best.

It is advisable to dig out the dirt in the henhouse two inches in depth occasionally and fill in with clean fresh earth.

Many a chick when apparently drowned after a rain can be saved by wrapping a flannel cloth wrung out of hot water around them and put in a warm oven with the door ajar.

We are Breeders of Single Comb Buff Black and White

ORPINGTONS

And can supply you with prize winning stock and high bred birds of all ages. All are bred for size type and uniform colors, from our first prize winners at New York, and Boston. Send for our catalogue of winnings and matings. Eggs in season. Inspection invited.

WHITE and COLUMBIAN WYANDOTTES

If you want something choice to show, in either of the above varieties we believe we can supply you.

Watch the chicks of our own breeding win this Fall.

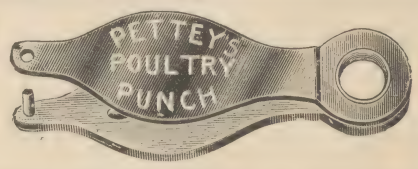
Exhibition and utility birds, including some rare bargains in breeders, for sale.

You are invited to inspect our new plant, where you can see the birds and the 80 ribbons we won last season at Madison Square, Jamestown, &c.

SUNNYBROOK FARM, West Orange, N. J.

HIGH-CLASS GAME BANTAM CHICKS

We have had a very successful breeding season and have close to 1000 fine bantam chicks of all varieties, and as we do not expect to show at more than one or two fall fairs we have a grand lot of Chicks for sale, including all varieties, and will be sold at low prices. For quality these Chicks are all bred from our imported pens and are invaluable for stock purposes, as well as for exhibition.



We have a nice lot we can sell at from $5 to $10 each and many real top notchers as good as we paid from £15 to £30 each for, that we will sell at as many dollars as we paid pounds for. Write us and we can fill your order and guarantee satisfaction or no sale.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

Poultry Breeding as a Business

Written Expressly for the American Fancier

POULTRY keeping is, in some respects, like schoolmastering. Is it not often the case that when a man has tried many ways of business and failed in them all, he sets up a school, poses as a teacher, and hopes he may succeed? Mind, it is not impossible that he may succeed. So it is in poultry keeping. When fortune has failed, when income runs short or he finds business must be increased for increasing liabilities, a man takes to poultry keeping. Anyone can teach! Anyone can keep poultry! In the end it is found that some few, who are not too good at other things can teach, can keep poultry. But nevertheless the rule is, that the man who can do other things well, will, with care, do poultry very well too. Where there is a business instinct, success in poultry is assured. Where there is no business instinct failure is almost inevitable. I dare say every man thinks, "Well, I have business instinct enough; it is want of capital or want of something else that has hampered me." But after all, was it the prompting of business instinct to engage upon a thing with insufficient capital, or insufficient anything else? Did not the ancient preacher say that when a man was about to build a house he first "sat down and counted the cost thereof?" Such a man was prompted by business instinct.

So now, as we are to look at poultry keeping as a business, let us count up the cost first. Then we can look at the returns. And in counting up the cost we must decide what the nature of the business is to be. Roughly we divide the poultry business into the utility side and the fancy side. As a money making concern I have not the faith in what is called the pure utility side, that I have in the fancy side. My own idea is, that if I am going to make a business of poultry, I will have to keep popular breeds of poultry which, falling in with the special circumstances of any place, viz., situation, exposure to weather, adaptation to size of runs, will do well for one, both on the fancy and the utility side. If I thus breed popular and suitable fancy poultry, surely I have more strings to my bow than with mere utility birds. For, if I have chosen well, and can manage well, I shall have some good exhibition birds sooner or later —money makers, or stock birds to be disposed of at fair prices, and culls which will sell at ordinary rates in the market, or in the case of pullets, be kept for laying. Or, I can fatten up these culls for home consumption or better markets, ready dressed. Surely, to sell exhibition birds at high prices and to sell stock birds, means more money at the same cost of bringing up, than if all were culls fit only for fattening or laying. I am now writing, not for professionals in a large way of business on utility lines, men who pass thousands upon thousands of birds through their fattening coops annually, or even the men whose sole business it is to breed the raw material for such. With them it must inevitably be a case of "undivided attention" on their own specialty. Rather have I in view the man who can rear or get reared for him, anywhere from a few to several hundred or more, possibly between one and two thousand, and out of them would like to make or augment a small income. Then, I say, I am satisfied that the higher the quality of the stock kept and bred, the higher the returns. The breeding of prize poultry is not a thing of mushroom growth. It has come to stay. It has made a rock bed immovable; a national industry in our country; something running annually into millions of money, so that good birds are never hard to sell, that is, of the popular breeds, prices ranging up to $10, and on occasion, rare I admit, yet on record, of $750 and $1,000. Miss Rylot paid $750 for her Partridge Wyandotte cockerel, and Captain Heaton sold a Game cockerel for $500, and subsequently rueing of the transaction, bought it back for $1,000. $125 is as common a price for a good bird as some breeds are common in the land. I am satisfied that for the breeder I have described, and for whom I am now writing, the combined principle of fancy and utility fowl breeding is the best. As I have explained this means, the breeding of such stock as come in useful if they fail to turn out exhibition or stock birds.

Let me say once for all, that I have no faith in the mongrel as a money maker at all—none whatever. Small, slow of maturity, and often not worth much when matured, if 25 cents to $1.25 be cleared annually, what is such a return for the man who wants to make money? It may do very well for the "guidewife or bairns" about a farm to bother with, where rent of runs and time spent do not count in the least, and especially in grain-growing districts, where there must be a certain amount of shed grain in the fields and about the granary. Can we set down the average English farmyard cross-bred hen's output as 120 eggs on the average annually? I seriously doubt it. Let us assume that we may. At two cents each all the year round she makes then about $2.50. Her keep varies from 2 to 2½ cents per week with us. At 2 cents this is $1.04. Call the cost $1.30. Put on twenty-five cents for depreciation of the hen by age, for loss by accident, disease, etc. What is eighty-five cents per head by way of a return? And things will have to be managed very scientifically to cut this profit with mongrel fowl. Suppose 100 fowls to be kept—and the more the greater the duplicate danger from (1) disease and general want of thriving, and (2) the quantity of output—you clear from $75 to $100. To breed such birds may be considered by the farmer's wife or daughter. They have the rent free, plenty of out buildings, scattered corn, plenty of time to boil grain and green stuff in winter and spin out things to the farthest. But what is it after all as a separate business? I came out from judging at the Royal Lancashire show and a young farmer met me. Said he: "I have taken four firsts and specials and two seconds. I have sold a young cockerel for $200 and altogether the day so far has made me over $250 and the season is only just opening. I have a grand lot left that can beat anything I have today—bye-bye." I soon met another. "Did your sales reach $5,000 last year," I asked. "Yes," he said, "they came to exactly $7,000, all bred by myself. I paid all expenses, kept house up and family going, paid heavy insurance rates, taxes, gave good subscriptions for my position, and put $1,000 away. All out of poultry. And I only have an acre and a half as a working ground, although of course I have birds bred out upon farms." Now, I happened to see the books, kept with all the exactitude of a merchant's office. Moreover my friend was a clergyman. There is no doubt whatever as to the accuracy of the statement: Now that is what I call a business—with business-like returns—and it was made and continues to be made out of fancy poultry, using up the culls for utility purposes. And no kind of poultry will pay like it. But it requires knowledge, requires acumen, business instinct, the power to acquire special knowledge quickly, to learn where most people merely casually look on, to see opportunities and grasp them, to make opportunities when they are too scarce, to judge accurately, make up mind quickly. It means further, patience, bull-dog-like tenacity to pull through every difficulty, and to extricate ones self from every danger, to rise early and to see to things personally and to keep a sharp oversight over the hirelings. If a man can do this he will make good returns from taking up poultry, in the way I have indicated.

Now the cost of a commencement. All depends upon whether you have land of your own. A couple of acres is more than ample for a start. Do not plunge in medias res all at once. Keep a few and get to know all about them—I say *all*. Know what they cost you from the start, per week at certain ages, per month, and finally, set down every penny spent as you go on. Never come in contact with poultry or a poultryman, but feel that you are the better, the wiser for it—that you have learned something fresh—got a new lesson. Never visit your fowls without trying to see something you never saw before. Make notes of all that is likely to slip your mind,of all dates, of weight of food consumed. Look out for faults rather than for merits. Be quick to detect flaws, and if an extinguishing kind appear, kill or part with the bird at once. Be eager to learn, calm to consider, careful to weigh accurately, and whilst this is going on, be planning for the future. Live a couple or three months ahead of your birds and by the time you want to part with them you will have customers found or markets spotted. Increase your stock gradually; but be assured of one thing, that when you have got a full grasp of the principles of poultry breeding you must have the best breeding stock or you will not be in the first rank as a breeder of that variety. You cannot unless you have exceptional talent, catch up old hands, who are already in advance of you, both in knowledge and stock birds.

If you are contemplating running the poultry business alone, do not attempt to do so till you have run it with something else temporarily, so as to acquire full knowledge. Do not give your plank the final shove off into deep water till you are sure.

I began on birds costing $3.75 each. I won at small local shows, but was always defeated at the larger ones. As I gained confidence, I spent a $25 note over a good exhibition bird, and took care to have excellent breeders of the same strain, and to be sure I was not mixing cock-breeding birds and pullet-breeding birds. I write of nearly fifty years ago, when there two strains were not as separate as now. I was soon selling birds at pounds and feeling sure of my way. At this juncture $250 well spent in houses and runs, and $250 in stock birds should give a capital start, preparatory to launching our venture as an independent concern. After than money will go into the business in proportion to the amount made. And, as in the case of the famous Abbot Bros. of Thurston, Norfolk, England, whose advertisement alone cost more than $5,000 a year, and whose plant and stock may be gauged at more than $5,000 additional, so will anyone who has acumen, industry and sufficient

(Continued on next page.)

(Continued from preceding page.)

capital for a start be able to spend on similar lines—I am thoroughly satisfied of this, that if a man in these days cannot make a decent living out of breeding poultry, the fault is not with the poultry. Such a vast concern the world over has poultry become within the last decade or two. As a writer for the European Continental Poultry Press, I have every assurance that the poultry industry is spreading over Germany, Austria, France, Russia and Italy at a speed that falls little behind that of a prairie or forest fire, leaving its mark in almost every village and town as it goes along. Yet there is room. We, who consider ourselves the foremost breeders in the world, import annually well on to one hundred million dollars' worth of birds and eggs, and then the supply is not equal to the demand — factories, hotels and the working classes, with increased wages, calling for more every year than before, in the way of poultry and eggs. In another article I will endeavor to show you how the breeding of prize poultry affects the commercial side of the question.

Partridge Wyandottes.

One of the Most Beautiful and Profitable of the Wyandotte Family.

By ARCHIE E. VANDERVORT.

I HAVE always been a great admirer of the Wyandotte. Their ideal shape appeals to one more than any other variety. The various colors and markings of the Wyandotte allows every one to indulge his fancy. Although all varieties of Wyandottes have good qualities alike, it is my purpose to speak a few words regarding, in my opinion, one of the best and most beautiful of the Wyandottes, viz,: The Partridge Wyandotte.

To produce a perfect specimen is the one question that confronts the fancy breeder. An ideal has been set by man, and fanciers, in their efforts to idealize their birds, are devoting much of their time in the hard work and study, striving on to mould nature into their ideal. Will these students of nature ever completely fathom her curious and intricate way and give to the world a specimen faultless in shape and perfect in markings? We fanciers all aim for the perfect specimen, yet our efforts fall short of producing it, but to attain it is within the realm of possibilities. If the human mind were large enough it could be done.

To produce specimens that approach perfection is a difficult question to answer. I will give a few Partridge Wyandotte. In shape, color of leg, etc., this variety should conform to the Wyandotte standard and in color it is identical to the Partridge Cochin. The Partridge Wyandotte is a breed whose origin none can question and a fowl whose inherited merits none can disregard. In selecting breeding stock you must first see that they have the true Wyandotte shape, for a bird quite faulty in this section is of but little value. Shape or breed characteristics are of the greatest importance and should be given precedence over all other features. The Wyandotte, not unlike other breeds, has a shape peculiar to itself. It is a bird of curves, well arched neck, wide, short, cushioned back and low, short, well spread tail, a broad, well rounded breast and a short, full body, breast set upon a pair of well spread legs.

The era lobes and wattles of both male and female should be bright red, free from white, and above all, do not allow in your breeding yards any variety of Wyandottes except the white, a bird having white in its plumage, for if allowed to creep in it is almost impossible to breed out.

In mating Partridge Wyandottes some prefer double mating, but I prefer the single mating. As the male is half the pen, take great care in his selection. See that he has the proper symmetry. In color his breast should be black free from red, with a good slate undercolor. Do not select a bird with too dark an under color, as it is difficult to get good colored females from such a bird. Select a bird, if possible, that had a well penciled breast when a chick, and when he is matured, if his breast is glossy black, you will get both good colored males and females from a single mating. His back, hackle and saddle should be a dark red with a black stripe extending down the center of each feather. In tail, wing coverts, body, fluff and thighs he should ge a greenish black in color.

Primaries and secondaries should be black edged with red, forming a red wing bar when the wing is closed. His comb should be of good Wyandotte shape and I would not sacrifice other good points merely for the sake of the comb as long as it was rose. His eye should be bright red and legs and toes yellow.

The females should have a bright red or orange red hackle, leaving a broad black stripe extending down and tapering to a point at or near the extremity; the stripe in the lower neck feathesr being penciled with with brown. Her breast, back, fluff and thighs should be a rich mahogany bay with a triple penciled marking running parallel with the edge of the feather. The wing feathers black, with brown penciling on the outer web. Tail feathers should be black, except the first two, which should be penciled with brown.

I have already spoken of shape. I wish to call your attention to this again. An authority says in one of his books: "Shape should come before color; it is shape that makes the breed, color and variety." Try your best to stamp the true Wyandotte shape into your flock. A Wyandotte with a high, pinched tail, long body, long legs, flat breast and long, slim neck is not a true Wyandotte. Breed good-sized birds. I do not mean the great big, over-sized ones are to be preferred to those nearer standard requirements, but the under-sized and immature birds should not be used. Health and vigor are of much importance, for a specimen lacking in stamina, no matter how good other ways, should never be placed in the breeding pen. Good care is an essential matter. You can buy the best that you can, mate the best you can, but if you don't take care of your birds you will ruin all. Start right and get good stock from a reliable breeder whose birds have a good reputation in the show room.

The Partridge Wyandotte has come to stay. They are beautiful, the best of table fowl, and for laying they're always "at it."

When attending a poultry show, notice how visitors inspecting the bird will always stop in front of a coop of Partridge Wyandottes and express their admiration of the beauty of the birds. They are one of the most beautiful and profitable of this great breed yet produced and bestow great credit on the work of the American fancier's art.

Now, dear readers, if you are thinking of breeding fancy fowls, either for pleasure or profit, or both, don't fail to give the Partridge Wyandotte a trial.

How to Wash a Bird for Exhibition

HAVE ready three large but shallow tubs of rather warm water. Put the bird gently into the first tub up to the head. Let him remain so a few minutes to get him accustomed to it. If wild close the shutters. The water should have been well lathered first.

Commence to lather a nail brush while your assistant holds the bird down. Now brush the head well. Go carefully over the lobes and neck-hackle, brushing straight down the feather. Or you may lay the hackle feather on your palm and brush across it.

Brush the wings and back. Spread the wings over the palm and brush well. Never apply the soap straight to the feather, but always to the brush or naked hand. Lay the tail upon the palm and brush straight from one end to the other. Now turn bird on its side, lift the wing and brush carefully the breast, side and thigh. Do the same with the other side, and once more go over the tail. Now rinse well and go over all with the clean brush to get the soap out. If the bird is young do be careful not to lay on too hard or you will have the thighs bare of the young pinfeathers. Rinse thoroughly, squeeze with the hand all soapy suds off the bird, and quickly transfer to the second water. Bathe him freely in this. Rinse and transfer to the third water and float and stir him about until you are absolutelv sure all the soap is out. Run the feathers through your mouth to try them if they taste of soap. Now lift bird out of third water, put in a little washing powder blue and a teaspoonful of glycerine. Plunge him again into the water and when thoroughly soaked lift him out. Run all the water off that you can with your hands. Then try to mop him with a soft towel, grasping him about the tail with the towel and thus drying up the water which runs to the tail. When as dry as possible take him by the legs and let him flap his wings to restore flexibility and put feathers into correct form. Now place him in a very large hamper on a perch before the fire. If the shutters are up you can leave hamper open. Sometimes I dry them in an open box laid on its side and lined with newspaper, with perch inside. In this way the bird gets the direct heat of the fire and dries more quickly, but it wants more experience. It is better to have a piece of thin canvas or sacking between the bird and the direct rays of the fire. Wash about dusk. In winter the bird will be three parts dry by bedtime. Leave him all night and by morning he will be ready for the training pen, again lined with white paper or freshly whitewashed or thoroughly washed. The birds have a habit of thrusting their heads between the bars and if the bars are not washed dirty marks result on the neck hackle. Bed down with chaff, preferably, or white sawdust, and keep scrupously clean, but always feed on a board or in a vessel, and put a little grit in. Do not let the food get amongst the sawdust. Wash about three clear days before the show and feed soft food with some boiled linseed or linseed meal in it to bring out the natural grease upon the feather.

Be careful in returning a cock bird to his mate after the show.

British Reports for the Fortnight.

By the REV. J. N. WILLIAMS, B. A., England.

Some grand youngsters were on view at Skipton Show, which is a chicken show exclusively. The Hamburgers were excellent. The same may be said of Wyandottes, especially Mr. C. N. Goode's Whites. They were grand and put down in the pink of condition. Game Bantams were not numerous but of highest quality.

The Hamburgh Club has resolved on holding three great shows, the Crystal Palace, the Club Show at Leeds, and the Great Hamburgh Show at Bradford, when nothing but Hambs will be exhibited. Heavy subscriptions are forthcoming for it. So Hamburghs will get a great lift up and will in consequence cost more money. The President himself is giving three five-guinea cups, or £15-15 in cash.

The autumn agricultural shows are in full swing, doing an immense amount of good in encouraging young breeders. The more of them the better for the Fancy.

The game season is now well in, with pheasants to follow on 1st of October. Prices of poultry culls will decline considerably after that, so that large breeders are getting rid of surplus stock.

Now is the time to buy breeding pens before they all go. Many breeders finding it unprofitable to sell breeders too cheaply will rather kill them than keep them on indefinitely and obtain poor prices at the finish.

Mating up will practically begin by the time this is in print, as some breeders must have chickens hatched on or before January 1st. A good many of them, it is to be feared, go for "before," and subsequently find themselves "passed" by the judge at chicken shows for "over age." The big shows are all getting their schedules ready for the printer. There will be the usual Kendal Game Show, where only game birds are shown, and the best in all the land will come together with their breeders or owners. Taken altogether the quality that has so far appeared at our summer and autumn show is quite equal to, and in some cases, superior to that of former years.

A cold raw fortnight opened September, with floods of rain. Consequently birds are a little off color in low-lying places. The Fancy as a whole is on the steady increase.

To Destroy Rats.

The following is from a recent bulletin of the United States Department of Agriculture:

One of the cheapest and most effective poisons for rats and mice is barium carbonate, or barytes. This mineral has the advantage of being without taste or smell; and, in the small quantities used in poisoning rats and mice, is harmless to larger animals. Its action on rodents is slow, but reasonably sure, and has the further advantage that the animals, before dying, if exit be possible, usually leave the premises in search of water. Its employment in houses, therefore, is rarely followed by the annoying odor which attends the use of the more virulent poisons.

The poison may be fed in the form of a dough made of one-fifth barytes and four-fifths meal, but a more convenient bait is ordinary oatmeal, with about one-eighth of its bulk barytes, mixed with water into a stiff dough; or the barytes may be spread upon bread and butter or moistened toast. The prepared bait should be placed in rat runs, a small quantity at a place. If a single application of the poison fails to drive all the rats from the premises, it should be repeated with a change of bait.

* * *

The lay of the nightingale may be very delightful to a well-fed man, but the "lays" of a hen are liked better by a hungry man.

* * *

Birds must have grit and salt.

* * *

Nest pans should be used at all times.

* * *

If your chickens disappear, watch the cat, watch your neighbor's cat, watch all cats, and keep them off your premises if you have to plant a few of them. Cats do lots of mischief in the poultry yard that is blamed on rats. Rats are bad enough, but a cat with an appetite for chickens will do more damage in a week than rats will in a month. Beware of the cat.—*Kansas Farmer.*

* * *

A neighbor would find a large hen dead nearly every day and could not account for it, but happening near the shed where the fowls dusted themselves, the slayer was found to be a forty-pound gobbler, who had been amusing himself while the turkey hens were nesting. Better shut his majesty up until the poults are large enough to roam the fields.

* * *

Keep charcoal where the fowls have ready access to it all times.

* * *

Keep the fowls well supplied with grit if good results are wished for.

* * *

Caponize the young males between the ages of eight weeks and three months.

* * *

The lack of vitality in eggs is often due to the breeding stock, the parents lacking vitality, or the conditions surrounding them being such as to impair the strength of the germs.

Leonard W. Lott, Editor

THE picture on cover page of this issue illustrates a White Polish cock just as the camera caught him. The photograph has not been retouched in any way. The bird is called "The Pride of Mill View" by his owner, B. F. Bryant, who says that as an exhibition and breeding bird it is the best he ever produced in his twenty-two years' experience as a breeder of the Polish fowl. He was never exhibited as cockerel, but as cock he won 1st at Madison Square Garden, January, 1907; 1st Buffalo, January, 1908, and as sire of 1st cockerel New York, January, 1907, and 1st and 2d cockerels at Buffalo, January, 1908. Also sire to the 1st and 2d pullets, Buffalo, January, 1908, and many other birds that have won for customers of Mr. Bryant.

* * *

The keener the competition the greater the pleasure of winning, but what a disagreeable shade of blue and how soiled looks the newly awarded ribbon if won by dishonest methods.

* * *

Don't bluff in poultry advertising, for it is a game where every hand is called.

* * *

This issue contains the complete list of Syracuse awards.

Judge W. C. Denny's report of both the Syracuse and Allentown Poultry exhibitions will be published in the next issue of the American Fancier.

Mr. Denny's report of Syracuse, Allentown and other exhibitions which appeared exclusively in our paper last season met with great favor and it is with pleasure that we anounce that a report of some of the coming leading shows will be written for our readers by Judge W. C. Denny.

* * *

J. Harry Wolsieffer, who has successfully managed the Buck Hill Poultry Farm left there this week and later on will start in business for himself. He is now located at Dunellen, N. J., but will spend considerable time judging at the various shows and attending to the editorial work of *Poultry Item.*

* * *

Frank W. Gaylor will leave Gedney Farm about October 1st to accept a position on Long Island.

* * *

Mr. Geo. L. Young, Secretary for the National Bantam Association, informs us that out of a total vote of fifty-one for judge of Bantams at New York Show, J. H. Drevenstedt received 23, Arthur O. Schilling 18, and C. E. Rockenstyre 10.

* * *

The raising of poultry is not suitable for that class of people who have failed at everything else.

* * *

On account of the recent fire at Winsted, Conn., which destroyed the Armory or Odd Fellows' Hall, the Association has decided not to hold a show this season because they cannot secure any other good hall.

The agricultural fairs should receive the support of not only the fanciers located in the State wherein the fair is held, but from the breeders of pure bred poultry in all the surrounding districts.

* * *

In the State of New Hampshire, we are informed, a hen built a nest in a tree forty feet from the ground and was laying eggs therein. What we would like to know is, what will she do with the chickens if she should hatch a brood in her elevated nest.

* * *

By an order of President Roosevelt about 70,000 acres of land adjoining the Oregon-California line is to be set aside as a reservation for the propagation and protection of all native birds. The order includes all land not suitable for agricultural purposes.

The land described is probably the greatest breeding ground in the world for water fowl.

* * *

An advertisement is not quite human; still, it is able to tell your story to thousands of people interested in poultry. However, it cannot talk to your satisfaction unless you place it before the right audience. Remember this when selecting your papers and don't blame the advertisement unless your offer is right.

* * *

"A fine fowl arrived at the office of a publication by express. Each of the officers of the company immediately laid claim to it. Finally it was taken home by the editor. The fowl played a prominent part at dinner and was heartily enjoyed by Mr. Editor.

The following day a letter was received by the editor. It ran.

DEAR EDITOR: Being a constant reader of your magazine, I have taken the liberty to send you a fowl. This bird has been a source of much discussion in the family, and we have decided to let you settle the dispute. What disease do you think the bird died of ?

* * *

"Do not waste your sunflower stock, says the well-known breeder, W. E. Samson. Slit them open from end to end and you will be surprised to learn what a quantity of fresh succulent food they will furnish for your fowls. They will pick the inside pith until they will leave merely the shell of the stock. After they get a taste they are very fond of it.

* * *

Every breeder of pure bred poultry should arrange to take a short vacation and visit their State Fair. The expense is small compared with the benefit received.

* * *

Some people claim that practical qualities and fancy points cannot be bred in the same bird. Do not believe them.

* * *

"Little drops of printer's ink,
Little grains of "sand,"
Make a mighty business
Cover all the land."

Kills a Chicken Thief.

GARDEN CITY, L. I.—Andrew Heinz, a laborer on the Salisbury golf links, near Garden City, L. I., was shot and killed early this morning we are informed, while trying to break into the residence of W. S. Ginnel, a dealer in diamonds in New York.

The body of the burglar was removed to Cornell's Morgue in Hempstead, and was not identified until late this afternoon.

There have been a number of attempts to rob chicken coops recently, and a number of the Garden City residents had decided to have their watchmen on guard all night for a week or so in an effort to break up the marauding. Peter Klossen is watchman for Mr. Ginnel, who is touring in an automobile in New England.

* * *

Soon after midnight Klossen heard suspicious sounds outside the barn in which he had concealed himself and decided to shoot to frighten anyone who might be about. He fired two shots from a gun, it is said, and heard a shout and a scampering of feet and then groans.

The watchman procured a lantern and went out to see what had occurred. He found a man lying on the ground. One of the shots had taken effect in the man's abdomen.

The shots had aroused some of the folks in the Ginnel home. From there a telephone message was sent to the Nassau Hospital and the man was removed to the hospital. He died at 4.30 o'clock this morning without recovering consciousness.

From Klossen's story Sheriff Foster said that he thought that Heinz had a companion. Klossen himself was sure of this. When daylight came a bag containing a number of chickens was found not far from where the man had been shot. The fowls were dead.

The Coroner here was notified of the shooting and after conferring with Sheriff Foster it was decided not to arrest Klossen. The Coroner said that the watchman had acted in defence of property and that he had not meant to shoot Heinz. Sheriff Foster hopes to get a clue that will lead to the arrest of Heinz's companion.

* * *

The Toledo Fanciers' Company have secured the Collesium for their next show, January 19 to 25, 1908. This building has 20,000 squart feet of floor space, is one story high and lighted perfectly day and night. There are several rooms attached that are at our disposal for club meets, etc. Premiums will be $5 first, $2 second, $1 third. Already have a number of special premiums, among them $50 in cash to the best bird in the show. Do not confound this show with another to be held on the East Side earlier in the season, but remember the dates as above and send in your name to the Secretary for a premium list. L. C. Taylor, Secretary, Gibsonburg, O.

* * *

The South Central Branch of the A. P. A.

Has been secured by the Augusta Poultry Association with all the medals, diplomas, etc. The medals consist of one gold, valued at $20, and forty silver ones. Mr. F. J. Marshall, of College Park, Ga., is president, and Mr. John A. Murkin, of Nashville, Tenn., is Secretary. The members that voted for Augusta Show were: C. W. Fowler, Smyrna; Alf. Bertling, College Park; J. Miller Walker, Augusta; O. J. Moore, Augusta; H. H. Verdery, Augusta; Dr. Walter C. Miller, Augusta; W. A. Herman, Augusta; R. S. Guess, Augusta; Dr. W. C. Cleckley, Augusta; President Augusta Poultry Association John Low Smith, Atlanta;. This is quite an honor for the association and should draw many birds. All indications are for a great show, up to date. They have 37 silver cups on poultry alone, besides many liberal specials.

Change in Dates of the Chicago Poultry Show.

When the management of the Chicago Poultry Show undertook to make arrangements with the Coliseum Co. for the use of their building for the next "Chicago Show" it was found that the building could not be had on the same show dates as in former years.

Therefore, after due consideration, and because this building is the most desirable in the city, it was decided to change the dates of the show from the last week in January to December 15 to 19 inclusive, 1908.

The building is one of the best for the purpose in the country and the breeders who wish to get prize records for their breeding stock will appreciate the change as they will have ample time after the show to mate up their breeding pens.

The patrons of the show, who have been interviewed, heartily approve the change and from the present outlook this will be the best show ever held in the city of Chicago.

The management is worthy of support as they have been trying to give the fanciers and breeders of the country at large a place to meet and compare their prize winning stock. Heretofore poultry including ducks, geese and turkeys have been on exhibition from almost every state in the union.

The men back of the enterprise have no personal object to gain and they have shown this by continuing to support the show without any dividends upon the money invested.

It is hoped that every poultry fancier and breeder will make a special effort to make an exhibit this year as the space is large and there will be room for all.

A list of the judges who will place the awards will be furnished later.

* * *

Rochester, N. Y.,

The annual show of the Genesee Valley Poultry and Pigeon Association will be held at Rochester, N. Y., the week of January 11 to 16, 1909. The great Rochester show has lately come very much to the front and occupies a prominent position amongst the best shows in the country and this year the boys are working harder than ever, with indications that their coming show will be a record breaker in every respect. They are to be congratulated upon their success in securing the new City Convention Hall for their next event, which secures a home for the show second to none in the country.

They have added materially to their equipment, having purchased one hundred sections of new coops and have also devoted their spare time during the summer to remodeling their old stock and their show will certainly present a neat appearance. As to the quality and quantity both are strong at the show of this progressive association. as its members enjoy a truly enviable reputation in the poultry fraternity for their integrity and true fancier's spirit. At the great Rochester show every exhibitor is assured of fair treatment and his birds of good care. A glad hand extended makes every visitor feel at home at once.

Watch for their premium list and send your entries to Rochester. Get in touch with F. A. Newman, Secretary, P. O. box 472, Rochester, N. Y.

The following well-known judges have been selected to place the awards: G. W. Webb, M. S. Gardner, B. W. Mosher, H. R. Ingalls.

* * *

Herkimer, New York.

Will hold their next show from January 5 to 9. Premium lists, when printed, can be obtained from the Secretary, Mr. Chas. T. Gloo.

* * *

Danbury, Conn.

The Western Connecticut Poultry Association, of Danbury, Conn., will hold its thirteenth annual show December 9-10-11-12 in the new State Armory building, the finest hall in Connecticut. Howard H. Mignerey was elected Secretary-Treasurer in place of H. S. Reynolds, resigned. F. S. Olmstead, Assistant Secretary in place vacated by H. H. Mignerey. Grand specials and all premiums paid at end of show is their motto. W. R. Graves and C. H. Welles, Judges.

The AMERICAN FANCIER
ESTABLISHED 1893.

A Magazine devoted to Standard-Bred Poultry and Pigeons.

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations.

The American News Co. have charge of retailing the paper over the news stands throughout the United States.

Published by

LEONARD W. LOTT & CO., :: :: 39 CHURCH STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

Middletown, Conn.

The sixth annual poultry exhibition to be given by the Middlesex County Poultry, Pigeon and Pet Stock Asociation will be held at the Town Hall, Middletown, Conn., on January 5 to 8, 1909. Silver cups, cash and merchandise for special premiums there will be for everybody. Judges, Graves and Bunnell. Premium lists will soon be ready, so drop a postal to the Secretary, A. L. Clark, and receive one.

* * *

Anderson, Indiana.

The Hoosier Fanciers' Association will hold their next show at Anderson from July 26 to 30. A number of beautiful silver cups are offered in all the classes and many of the specialty clubs will be represented. The judging will be done by Mr. Kummer and Mr. Ewald. The Secretary of the association is N. M. McCullough.

* * *

Notice to All R. I. Red Breeders.

Notice is herewith given to all Red Club members, and an invitation to all who are not members, to become members and compete for the prizes offered at the Rhode Island Club of America, New York State branch, which will hold its annual meeting and show in connection with the big Utica Show, December 14 to 18, 1908, and there will be a special judge to judge the Reds—Mr. George Tracy, the noted breeder. There are two silver cups to be offered: one for best single comb male and female, one for best rose comb male and female. There is over $50 in cash offered as specials, and so divided that the third prize winner gets a share. The same applies to both combs. There will be club ribbons offered, also many noted Red breeders have offered eggs from fine pens of Reds. Get list of specials from the Secretary of the Utica Show, Mr. Ira Gaymond, Maynard, N. Y.

The special prizes are offered to members of the branch club only, and any breeder of Reds that is a member of the parent club and branch can compete for these prizes. Let every member of the parent club, not a member of the branch, send 50 cents to H. L. Greene, Secretary and Treasurer, at Sherburne, N. Y., and these prizes; and anyone not a member become a member and compete for ber of these clubs should send $1.50 to the above Secretary and Treasurer and become a member of both clubs. All membership fees expire December 31. You are wanted at our meeting, held December 16, at 2 P. M., in a room adjoining the show, to talk over the true color and many other things concerning the Reds; also to elect officers and attend to such things as will be brought before the meeting. You will have your birds judged by one of the best Red judges in the country. Mr. Tracy is a well-known breeder and has been secured at a big expense to be at the show to judge the Red class only. Three other judges will judge the other classes. We invite every New York State breeder of Reds, both combs, to join us. Do not delay. It's worth far more than the price to have your birds judged by this noted judge, and you can see hundreds of Reds together of the best type. You will get a copy of "Red Hen Tales" furnished free.

We expect the largest display ever seen together at this show. It took a special judge two days to judge the Reds at our show last year, and ought to take longer this year. There will be many birds there from all over the state. Be sure to join the club and get your birds sorted out for this show. The specials that the big Utica Show will offer will be quite liberal. These prizes are so divided that the small breeder has an equal chance to win them. They are placed on single birds mostly, and on even the third prize. Bring your birds, after you have written Ira Gaymond of Maynard, N. Y., for premium list of the big Utica Show. H. L. Greene, Secretary and Treasurer.

Missouri State Show,

At Trenton, Mo., have secured the following to place the awards: Heimlich, Riggs, Rhodes, Thompson and Burhans. T. E. Quisenberry, familiarly known to us all as "Cush, the Chicken Crank," is Secretary of the Association, at Slater, Mo. Their last show was a great success and birds were exhibited from ten different states.

The American Plymouth Rock Club.

Mr. W. P. Schwab, Irondequoit, N. Y., has resigned the office of Secretary-Treasurer of the American Plymouth Rock Club and Mr. A. C. Smith, Waltham, Mass., has been elected acting Secretary-Treasurer. The following is a copy of Mr. Schwab's letter of resignation:

Irondequoit, N. Y., Sept. 9, 1908.

Mr. C. H. Latham, President American Plymouth Rock Club, Lancaster, Mass.:

My Dear Sir:

I hereby resign the office of Secretary-Treasurer of the American Plymouth Rock Club.

You and all my friends may well imagine that I take this step rather reluctantly, but I find that it is really impossible for me to devote the time required for club work and have concluded that its best interests and future success can best be maintained by this action.

I greatly regret having to take this action, and at this time. The club and its work means much to me. I have served as Secretary-Treasurer for eleven years and have given my time and best attention to all its demands.

I hope in the future, from the ranks, to give the club and its members all possible aid. I wish to see the club prosper and to fittingly represent the Barred Plymouth Rocks and to maintain its position of leader of its kind.

I am very grateful to every club officer and to every member, for the kind and generous treatment accorded me in past years, and I sincerely hope that the members will extend to the President, and to my successor the same generous treatment and support they always so freely gave to me.

With the assurance of kindest regards, I remain,

Very truly and fraternally yours,
H. P. SCHWAB.

Slover 2. Splash cock—Wm. Haines, Jr., 1; Wm. T. Slover 2. Splash hen—Wm. T. Slover 1. Splash cock or hen bred 1908—Wm. T. Slover 1. A. O. C. cock—Wm. Haines, Jr., 1. John W. Savage 2; Chas. W. Hughes 3. A. O. C. hen—Wm. T. Slover 1; John H. Clark, Jr., 2; John W. Savage 3.

DUCHESS—Any color cock—Everything to Martin G. Smith. Any color hen—Everything to Martin G. Smith.

This is an exact duplicate of the list of awards furnished us by the Secretary.

The Oriental Frill Club has elected Mr. Kennedy to place the awards at New York.

* * *

Homing pigeons, in calm weather, can travel at a speed of 1,200 yards a minute. with a brisk wind prevailing and blowing in the direction of its flight, a pigeon has been known to make 1,900 yards a minute.

* * *

Judge Ewald will place the pigeon awards at the coming Anderson, Ind., show from January 26 to 30.

* * *

The Novice.

It is with much regret that I have often heard the young fancier say, "What is the use, I can never win in competition with the rich fancier, what is the use of me trying to breed high-class birds and show them." This statement is made very often and should never be allowed to pass without showing that it is incorrect. I could name many a fancier working for small pay with a family to support, who has won in our larger shows in hot competition. It is very true that money will buy good birds and this is a quick way of getting to the top, but I have seen high priced birds beaten by birds that have been bred by a poor fancier who kept everlastingly at it. The novice must not expect to send a bird which he has bought for a small sum, to a large show and win out where fanciers of long experience have entered birds. He must commence at the small show, learn his variety, learn the required points, and learn how to breed them to secure good results. It cannot all be learned in a book; experience is essential.

A novice of limited means would do well to first secure the best pair of pigeons he can for the money he can afford to spend, not a dozen birds, but only one pair. Next breed them; when the fall shows arrive show them, and by all means attend the show. After the awards have been placed get hold of the judge or some reliable fancier and find out why you won or lost. Study all the birds of the variety in which you are interested and learn all you can. Visit the loft of a fancier of your variety and get all the information you can. If you are going to succeed you must study your variety in ever way possible.

Now you have found where our birds are at fault, make up your mind to improve one fault, and when you have the cash buy a bird which is strong in the point that you are weak, and by in-breeding get the result you are after. Keep this up and in time you will have winners; it has taken you several years, in fact you will find it a life study. You will find that it is the fancier who really breeds his birds who sticks to the game, and not the one who simply buys winners and knows but little in regard to breeding them. Have courage and make up your mind to succeed, and if you have sand, you will never regret your efforts.

Pigeons in Canada

(Continued from last issue.)

Alas! it is a long hard drop from the Pouters to the next best the Canadian variety, and it is difficult to say what most nearly approaches them. My opinion is that the African Owls are next. The best whites on this continent, as revealed at the Owl Club Show held in Chicago last Winter are owned in Toronto. They belonged to Mr. F. A. Woodward, but are being sold, I understand by Mr. Worthy, who is best known as a very discriminating fancier of short-faced Tumblers. Mr. Limon, of Toronto, has easily the best stud of Carriers in Canada, most of his stock having been imported from noted English lofts. Mr. McKinstry, of Ottawa, leads in Magpies, and Mr. Odell, of Montreal, in long-faced Tumblers. There are some other good fanciers in the province of Quebec, I believe, though I cannot speak of them with certainty; but there is no doubt that Toronto is the chief pigeon centre of Canada.

We have had some very good Jacobins and Fantails out here, and I learn that something extra good in the Jacobin line has been imported by Mr. W. Tregwin, whose name will be familiar to Old Country Jacobin fanciers. We have a few good Barbs, a few Pigmy Pouters, Trumpeters, Swallows, one loft of show Tipplers, a few Cumulets, and some nice Orientals.

Nine-tenths of the Canadian fanciers keep what is called a collection, as distinguished from a stud of pigeons. They have several varieties, and indeed in this country it is the only way the hobby can be made to pay anything worth while in prize money. The moto for the Canadian breeder is to have half a dozen or a dozen varieties, one or two pairs of each, and each pair a winner. Then he can win about £20 a year at our two or three leading shows. But a man might have a dozen pairs of the best Pouters or Fantails or Tumblers living, and unless he would send his birds to the American shows he could not make £5 a year on them in prize money.

One fact is worth noting—the absence of Dragoons in Canada. I am quite sure there is not a fairly decent Dragoon in the whole Dominion, and I know of no one who breeds them. This is deplorable, in view of the fact that our stiff climate should suit a hard-feathered bird admirably. Besides that, the Dragoon is quite one of the most popular breeds of the day, and extremely hardy.

It is our sparse population and the magnificent distances of Canada that put the obstacles in the way of fancy pigeon keeping and showing. We have one big show a year at Toronto, where the classification is generous, and the prizes range from 6s. to 2s. There are also good shows at Guelph, Ottawa and London, and smaller shows at Montreal, Vancouver, Winnipeg, Hamilton, and other centres; but Toronto and Guelph correspond to your Palace and Dairy. If a man wins at those shows he has some grounds for claiming to have the best in the country. As our population continues to grow, and especially as the Old Countrymen continue to come in, the pigeon Fancy will continue to flourish. We have several fanciers already who will pay £5 for a good bird, and no doubt they would pay more if they had to.

In Homing pigeons, we have a great number of very fine birds, and a good number of very hot fanciers. The Dominion Messenger Pigeon Association, with headquarters at Toronto, is the leading organization, and must have about fifty active members. The records made by these fanciers will make a favorable comparison with those made by American flyers. With her long and unprotected frontier, Canada is by nature designed to be a great country for the Homer man, and it would be the part of wisdom for the Canadian Department of Militia to encourage the sport of Homer racing. One mistake the Homer men make is in having all their long races from a point outside Canada. The birds are thus familarised with American rather than with Canadian territory, and their possibilities of usefulness are thereby curtailed. The reason for the American routes being adopted is that the train service on the other side is better, and the birds consequently are better looked after than they would be at Canadian points of liberation. Moreover, the courses are easier. I do not say that these reasons are sound, for I think that the fact of one course being harder than another should be rather an incentive to fly it, but at present they prevail. Every fancier is anxious to get his birds to fly 500 miles in the day, and therefore the easy course is the popular one.

Tipplers are destined to be a popular breed in Canada, I believe, for there are a good many fanciers of this charming variety. As a matter of fact, the American record is held by a Toronto man, Mr. James Simpson, and it may interest some of your readers to know that the birds he flew were descended from stock bought from the late Harry Curtis, of Walkley, and the late Geo. Smith, of Nottingham, the original importations having been arraigned through the kindness of the Editress of *The Feathered World*. The present record is 12 hrs. 16 min.

(Continued in next issue.)

IF YOUR PROPOSITION IS RIGHT

AN AD.

In the American Fancier simply can't help but bring you many orders.

READ WHAT OTHERS SAY

and then write us for our circular containing copies of many more testimonial letters.

I am selling my surplus stock right along from ad. in your paper. Had a letter from Los Angeles, Cal., wishing to buy some birds, and as high up as New Hampshire.
Yours sincerely,
DR. W. C. CLECKLEY,
President Augusta Poultry Asso.

GENTLEMEN—I have sold from my classified advertisement since August 19th, 1907, to date (June 16, 1908), $937.50 worth of Game Bantams, which, I think, is doing fine.
Could have sold more if I had them.
Yours sincerely,
W. D. WITMYER, Lititz, Pa.

I have sold all my surplus stock from my advertisement in THE AMERICAN FANCIER, and could have sold twice the amount had I had them. Have had inquiries from a good many States and they still keep coming.
H. A. PETTIT, Danbury, Conn.

From a little classified ad. that I inserted a few weeks ago, I sold all my Bantams, and am still receiving answers to it almost every day, although the ad. only appeared twice.
Yours truly,
MRS. EDWIN BROWN JENKS, Yonkers, N. Y.

Replying to your favor of yesterday, I regret to say that I will not need any more space at present, as I have not a single bird to sell, but I wish to say I positively know that THE AMERICAN FANCIER has sold $230.00 worth of stock for me within the past three weeks, and I am answering AMERICAN FANCIER inquiries every day. No more stock for sale.
Very truly yours,
WM. L. HOWELL, Geneseo, N. Y.

The American Fancier has a **quantity** of **quality** circulation.

FEED
TEN CENTS PER BUSHEL

PATENT PENDING

Is your main feed for growing chicks and making eggs costing you more than 10 to 15 cents per bushel? Have you raised 95 per cent of all chicks hatched this season? Can you care for 2000 layers and raise 3000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how I do it. My new book, **"Profits in Poultry Keeping Solved,"** will tell you how to do it, as well as save you $25 on every 100 chicks you grow to maturity. My third edition of 5000 copies now ready. 3000 Single Comb White Leghorns and White Wyandotte chicks growing under my new system for the fall trade. :: :: :: ::

WILLIERS WINNERS

Chiefly dots and dux, Stock Birds.
Including Geese.

MORRIS, SPARKILL, N. Y.

The Buff Rock Club.

The American Buff Plymouth Rock Club offers as special prizes to every poultry show in the United States and Canada that will publish in their premium list and send copy of same to the undersigned the followig notice:

The American Buff Plymouth Rock Club offers as special prizes four handsome silk ribbons:

One for best shaped male.
One for best shaped female.
One for best surface colored male.
One for best surface colored female.

Only members whose dues are paid to July 1, 1909, are eligible to compete for these specials, or new members whose applications reach the Secretary prior to the show. For information in regard to the club write William A. Stolts, Secretary, R. R. No. 19, Indianapolis, Indiana.

* * *

Encourage your sons and daughters to take an interest in poultry. Along with the American mother, the American hen is the backbone of the country.

When you blow about your chickens, don't give eleven hens an average of twentyfour eggs a day. There are some people who will not believe the story.

The fellow who says, "Well, I didn't expect to win, for my birds were just picked out of the yard," is the fellow who makes trouble for the man in the duster.

Do not overfeed your fowls and make them lazy. There are enough gourmets on earth in other walks of life, and man is the chief being in this particular.

The main trouble in poultry culture comes from the fact that few of the thousands who take up the industry have a correct idea of the conditions that bring success.

When anything goes wrong about the poultry yards, find the cause. People who talk about "luck" and "bad luck" are usually the ones who do not try to ascertain how success came about or how the difficulty arose.

We are Breeders of Single Comb Buff Black and White

ORPINGTONS

And can supply you with prize winning stock and high bred birds of all ages. All are bred for size type and uniform colors, from our first prize winners at New York, and Boston. Send for our catalogue of winnings and matings. Eggs in season. Inspection invited.

WHITE and COLUMBIAN WYANDOTTES

If you want something choice to show, in either of the above varieties we believe we can supply you.

Watch the chicks of our own breeding win this Fall.

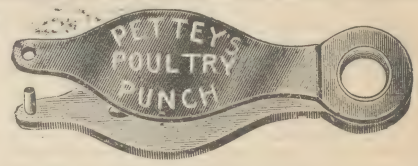
Exhibition and utility birds, including some rare bargains in breeders, for sale.

You are invited to inspect our new plant, where you can see the birds and the 80 ribbons we won last season at Madison Square, Jamestown, &c.

SUNNYBROOK FARM, West Orange, N. J.

HIGH-CLASS GAME BANTAM CHICKS

We have had a very successful breeding season and have close to 1000 fine bantam chicks of all varieties, and as we do not expect to show at more than one or two fall fairs we have a grand lot of Chicks for sale, including all varieties, and will be sold at low prices. For quality these Chicks are all bred from our imported pens and are invaluable for stock purposes, as well as for exhibition.



We have a nice lot we can sell at from $5 to $10 each and many real top notchers as good as we paid from £15 to £30 each for, that we will sell at as many dollars as we paid pounds for. Write us and we can fill your order and guarantee satisfaction or no sale.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at **Madison Square, Toronto, Guelph, Chicago,** and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

VOL. XXXVIII NEW YORK CITY, OCTOBER 15, 1908. No. 713

Exhibition Poultry for Beginners

By The REV. J. N. WILLIAMS, B. A.

IT is very little use for the beginner (whatever the breed is that he fixes upon) trying to breed a good bird unless he understands the principle of breeding. So long as he trusts everything to chance so long will he be unsuccessful. The younger he is, the more likelihood that he will trust everything to chance. We will suppose that he has fixed upon the breed he will take up, and has purchased a fair show specimen, say a cockerel at ten dollars. Now his one object is to breed a better cockerel than this one, or to say the very least, one quite as good. When he can do that, and knows how to take care of his poultry, prevent attacks of disease and cure ailings when they come, then he may launch out more capital. He is not wise to do so at first till he has got some little inkling of what to buy, and as I have said, how to keep it. Now the fact that our novice has bought a cockerel will be sufficient to lead us to the next step, the choice of mates. I am free to confess that there may be and are, birds such as Campines, which are bred all from one pen. That is to say, the exhibition cockerel and the exhibition pullet are bred from identically the same birds. But this is the exception rather than the rule. Therefore I treat here of the rule, and not of the exception. Most breeds have the cockerels bred from an entirely different pen, than the pen which breeds the pullets. This is not so much due to the pullets being a different color to the cockerel, as in the case of all game birds. In wild nature we find gorgeous males sprung from very sombre colored females, as we see in the Golden Pheasant. But it is because we have arbitrary standards of points, which insist on the color of the female, and sometimes the shape, bring outside the zone of natural production and also that we very often do in the extreme brightness of a Black Red cockerel, pull the very opposite way from what the standard lays down for the pullet. The black red cockerel, with all its brightness, will produce a black, red pullet. But not a standard black red pullet. The standard requires one evenly and finely penciled brown over the back, wings and tail. And the show cockerel will produce his pullets coarsely penciled, and some rusty colored feathers in the wing, which will debar her from all competition. The exhibition pullets' color has been arrived at very progressively. Every time a little bit of improvement in it took place, presumably the same blood would be in her brothers. And by using brothers to exhibition pullets for pullet breeding, in the course of a generation of two, things so fell out that exhibition pullets could be produced with some certainty from these cockerels. But it also appeared that these same cockerels were far too dark as exhibition birds. They would not do for that purpose, at least not in good competition. They must be reserved for pullet breeding. The same thing may be said with regard to cockerel breeding. Take the case of the Silver Penciled Hamburgh, the prettiest show cockerel, in my opinion, of any bird living. He has a lovely rose comb and immaculate, thick, kid-leather-like white lobe, a white body, a full flowing green-black sweeping tail, with a white lacing round the top and bottom of every side feather and the sickles. The exhibition pullet is ringed from the bottom of the neck hackle all around in narrowest alternate rings of black and white—a very pretty bird, indeed. Now originally these two exhibition birds were most probably sprung from the same origin as the Campine, and I remember the time 45 years ago, when some penciling was looked for in certain places on the cockerel. But in the struggle to get the tail right, well edged with white, the very lightest pullets had to be used. This use cleared the body color gradually of the cockerel and widened the markings of the pullets till they became lighter and lighter still. They are still ringed, but in a very pale, open, coarse way, compared with the exhibition pullet. The darkest cockerels were kept for the production of her, till at last some cockerels actually came hen feathered just like her, only larger, and these they use to produce the excessively fine, deep, regular rings of the show pullet.

All this must be clearly understood by the beginner. For though he may have chosen to take up some breed or other where the color is the same in the cockerel as in the pullet, for show purposes the shape of the two birds will generally be different, and so, though not so imperative as in the cases I have cited, yet most breeders prefer to use two separate pens. Do not suppose for a moment, as I have seen some assume, that a cockerel breeding pen will not produce pullets, nor a pullet breeding pen cockerels. For they will. Therefore it is very essential that there be a clear mark in the breeders' mind between the product of the two pens. Sometimes there will be no difficulty at all, because color will show which is which. But at other times the color does not help so much. A bad colored pullet may be bred from pullet pen, as in duckwing or black red game bantams, but a bad colored one is sure to be from the cockerel pen. If these bad-colored ones get mixed great harm results. So the chickens should be marked from the day they are hatched. A very good plan is to burn a tiny hole through the web of the foot with a needle point. When this double mating system is thoroughly grasped, there may be considered the matter of strain which I mentioned in my last article. The novice will readily understand that if breeders go on year after year mating their birds judiciously without the introduction of foreign blood, they will have a strain, as it is called, all their own. And in this strain certain pecularities may appear. I do not say they will appear, but may. In trying to improve one point, others get left a little behind for the time being. Some strains can be told by their owners. Take the case of my own Silver Penciled Hamburgh Cockerels. They are generally bigger than those of other strains. I have never bred them from too near relationships, and always avoided mating brother and sister, preferring greatly parent and offspring, and I never breed from pullets, but two-year-old hens. But in a new breed like Black Wyandottes, it is absolutely a farce for anyone to say they can recognize their own strain, or birds, descended from it. It is utterly impossible. For one thing in this new breed, now more or less under process of manufacture, there is no fixed strain in our country. The bird has not been long enough bred for that. But where strain is strongly emphasized, it is inadvisable to be constantly crossing it. New blood must occasionally be introduced. But always let it be from the same strain as you have already got. The first, or out-cross, between two well established strains is apt to be coarse, and to produce anything but what was desired. It may ruin, too, what you already have. I remember forty years ago having a strain of black-red bantams, remarkable for bright, but somewhat long backed cockerels. It was in the days when the strain would breed either show cockerels or show pullets, but the latter were always of the first water. To get shorter back, and even brighter color still, I introduced the smallest and brightest and short backed cockerel of the day. There was not a bright colored cockerel the next year. All were very big for bantams, and the pullets were never again so excellent in color. But the mischief was done, and we could not get back to the original, do as we would.

Therefore, I say, be very careful of crossing strains. It has to be done very occasionally, as when one man's strain excels in a point we are weak in. But it will take two or three seasons for the strain to settle down into a dependable state.

* * *

Embden Geese

How They Are and How They Should Be.

By THEO. F. JAGER.

THE last annual meeting of the American Poultry Association at Buffalo saw a Revision Committee elected, consisting of nine members, who have charge of the coming revision of the Standard, and to them especially and to all others interested, I respectfully submit the following for consideration:

As our Standard now reads we seem to desire an Embden Goose of the shape and general make-up—excepting only the dewlap desired in old birds—as the Toulouse. Anyone who compares the wording of the two descriptions as given for Toulouse and Embden, if he had never seen one, could well be pardoned for mixing them up or calling them one breed. If we had copied the very words as used for the Toulouse description for the Embdens, we would not have done worse, nor could we have done better, if such is really what is wanted. The question is now, should an Embden be of the shape and make-up of the Toulouse? Judging from the birds as seen in late years, if compared to the type as it existed ten and more years ago and as it is still bred and fancied by a few, we have lost the old lines of the true Embden type and made them slowly but surely a cousin variety of the Toulouse. Embdens should be the Toulouse. Embdens should be sharp lined birds, even their wamping must remain within the outline, if viewed sidewise, of the body. Where old birds of the Toulouse variety show their wamping to almost touch the ground for from two to six inches, the latter preferred, the true Embden has its wamping coming down to a point between the legs and it remains a few inches above the ground. Embdens should not have the loose skins and bagginess of the Toulouse; they should be a trifle flatter in breast, longer in back, and seen from the side on a level with the eyes, conform somewhat to a right-angled triangle, resting on its point. Toulouse, on the other hand, should conform to the shape of an irregular square, of which the upper line is at least twice as long as the base line formed by the wamping. If there is and should be any difference in the head and neck points of the two breeds, it may be explained in saying that the Toulouse should be rather short-necked, at least it will appear so on account of the rather abundant and loose feathering, which should show liberal ruffling on the neck besides, and the head is somewhat shorter. Embdens should not spoil the symmetry of a close feathered body by a coarse neck or head and their bill is a trifle longer. The presence of dewlap on the Toulouse will make their appearance more typical, as its absence in Embdens will preserve their clean lines. Speaking of the color of the bill, will only state that the Embdens of former times had all a carmine colored bill and it is no rarity now to find this, the original shade cropping through. Whether the orange color was inserted by design or mistake, is now irrevelent, but the truth remains, that the best typed Embdens have as a rule still the carmine bill, or carmine shading into orange.

I admit that we can make a variety into almost anything that we want it to be and many breeders no doubt, in selecting the large wamped birds for breeding, have by this time lost the real old stock blood. The demand may have been for birds that look large and were low down as in many a show Embden, that could have been shown as fine white Toulouse, dewlap and all were pre-

(Continued on next page.)

(Continued from last page.)

ferred over the smaller appearing true type.

If we, the majority of us, desire this large, loose skinned bird, let us keep the wording of the Standard and add to it "dewlap in old birds very desirable," and we shall certainly have a copy of the Touoluse in a very few years. But, if this is our wish, why not make it a white Toulouse and at least remain fair to a valuable breed, that we seem not to want as its originators and nature made it.

Has the above any bearing on the utility value of the breed? No doubt it has. Records bear me out, that the Embdens unhampered by our improvement a la Toulouse, used to be exceptional layers, in fact doubling the records of the gray sister variety and fertility and chances to live were great. The goslings grew quickly into solid chunks of meat. Have we not gone back to the records of the Toulouse egg yields and fertility now? Are our Embdens of today still leading them in laying and are their goslings still the most desirable, compactness of meat considered?

The S. C. White Orpington.

In writing these few lines to THE FANCIER about the S. C. White Orpington I do not in any way want to belittle any of the other breeds, but merely to bring before the readers of your valuable paper the good qualities of this, by far too little known breed of poultry. You can visit almost any of the shows and rarely seen any of them caged, outside of any of the leading shows, and even in these only a scant quantity are exhibited.

I have met breeders of the more widely known varieties who knew practically nothing about this fine variety of Orpingtons and who would have to refer to his catalogue or else enquire of the exhibitor what they were. At the last Englewood, N. J., show one of the prominent Rhode Island Red breeders, upon passing coops in which were S. C. White Orpingtons explained to some friends that they were White Rocks. I told him to guess again and after being informed they were Orpingtons said there was not much difference between them and a White Rock. I only mention this as one instance of how little this breed is known to the rank and file of poultry men, both breeders and ordinary fanciers like myself. It was very evident to me that this party's knowledge of White Rocks and White Orpingtons was very limited, and he is not the only person I have met who has got different breeds construed.

Previous to keeping the S. C. White Orpingtons I have kept numerous other breeds, namely Barred Rocks, Cochins, Anconas, Buff and Black Orpingtons, but finally found my ideal in the White Orpington, and have been breeding them for the past five years, and like many other fanciers who think the same of theirs, I think mine are the best.

For producing eggs in the cold winter months they have no peer. From a flock of over 100 I selected twenty, and disposed of the rest. During the month of February those same twenty, or I should state eighteen, for I had one cock and one cockerel, laid over 300 eggs, and four birds I kept in a pen for eggs for hatching purposes, laid eighty-four eggs from April 15 to May 15. I consider this doing remarkably well.

The chicks hatch out strong, are easily raised, mature quick, and for the table are unsurpassed. At maturity the hens weigh about eight pounds and the cock nine to ten. I had one weigh ten and three-quarters pounds. They are hardy and not so susceptible to the many diseases poultry are subject to contract. For the fancier with a limited space they are the best breed known, as confinement does not stop egg production.

Hoping this little note will catch the eye of some one who is looking for a good, reliable breed and can give this breed a fair chance I am confident after a fair trial they will form the same opinion as myself.

Respectfully yours,

C. H. RICE.

GENERAL REPORT OF THE NEW YORK STATE FAIR

By W. C. DENNEY, Judge

THE 68th annual State Fair held at Syracuse September 14-19, brought out the finest exhibition of standard bred poultry that has been gathered together at a Fall exhibition. The number of entries did not exceed those of last year, which was the largest in the history of the Fair, but the quality was better in a number of the classes. For the time of the year, the young stock was very well developed and there really seemed to be no foundation for the complaints that many have made about it being a backward season for early and well developed chicks.

Mr. John D. Jacquins who, for a number of years has been superintendent of the poultry department, has been promoted to the position of assistant superintendent of the entire fair, and W. E. Gilbert of Syracuse was appointed to the position. "Jacq" has been an untiring worker for the poultry department and has done a great deal in bringing about better conditions for exhibitors. While he has been in charge, the premiums have been increased and the new cooping system installed. The work of seeing that the machinery of the whole fair was kept in motion could not keep "Jacq" away from the poultry building, which he managed to visit several times, and a host of friends that he has made were mighty glad to see him.

"Billie" Gilbert, as he is known to his friends, is not at all a stranger to the State Fair. I have been attending it regularly for the past eleven years, and each season I have noticed that he has been one of the supporters, and among the exhibitors with an entry of Barred Rocks with which he has been a "many times" winner. He is a true fancier and good fellow and will be successful in his new work.

The location of the poultry building has been changed just to the right of the main entrance of the grounds, giving it the most prominent position of all. The aisles were thronged with visitors from early morning till night, and it would only reqiure a visit to emphasize the necessity of much larger quarters for this department, which has overgrown its present quarters several seasons ago. Rumor has it that the plan is to continue to erect modern buildings quite up to the standard of the new manufacturers' building, which was used for the first time this year, and which is the finest fair building in the United States. Its erection cost in the neighborhood of a quarter of a million. It is to be hoped that the new poutry building will not be long delayed.

The judges this year were B. Mosher, M. S. Gardner, R. B. Robbins, C. W. King, W. J. Stanton and W. C. Denny. The $100 cash special for the largest and best collection of any one variety was awarded to Mr. W. L. Weddigen, who made an exhibit of seventy-two Rose Comb Buff Orpingtons.

The Barred Rocks were a stronger and larger class than last year. Gardner & Dunning and Jonas Hayner managed to corral nearly all the awards, the former winning all the firsts excepting 1st pen of young, which went to Hayner, who showed a remarkably fine pen. Among the females in this pen was a pullet that would have made an easy winner in the open class. Among the winners shown by Gardner & Dunning was a daughter of the hen that won the shape special at Madison Square, December, 1907, and a grand-daughter of the hen winning shape special at the same show in 1906. For Plymouth Rock type this hen is a model, as well as an example of what careful breeding will do.

Buff Rocks were about the same in liked the 1st pen of young, 1st hen and 1st cockerel, the best winners in the class.

White Plymouth Rocks were far below the usual standard shown at Syracuse, both in numbers and quality.

Silver Wyandottes have always been a popular class at this show and this year was no exception. There were over sixty-five birds in the class and some "corking" good ones among the winners. Columbian Wyandottes were about the same in numbers but better quality than were shown last year. The 1st pen was one of the most promising that I have handled. In addition to good Wyandotte type they were strong in hackles and had remarkably fine colored tails. 1st hen, 1st cockerel, 1st, 2d and 3d pullets were also "corkers." Golden Wyandottes were a full class, but outside of a few birds, were rather lacking in quality.

Evidently White Wyandotte breeders have "a plain case of scare" and left the field entirely to John S. Martin. For the last two years Mr. Martin has made remarkable winnings at this show, but this year's records overshadows all previous attempts, when he won every award competed for, including 1st, 2d and 3d on pen of young and old; 1st, 2d, 4th and 5th on cock, hen, cockerel and pullet. I must make special mention of his first prize hen, which I consider ahead of her time and the standard. Hens of her type will produce exhibition cockerels and pullets, something that the exhibition females demanded by the present standard will not do. Leading breeders who examined her concurred with me in this opinion, and Mr. Martin called my attention to cockerels and pullets in his exhibit that were both produced from the same hens.

A fine class of Buff Wyandottes were shown, the cock, hen and pullet classes being especially good. There were more Black Wyandottes than are usually found and among them was one of the best birds of the variety that has ever been shown. 1st cock, who was a true Wyandotte, about as good as any White, and with good color. Partridge and Silver Wyandottes were neither as large a class nor as strong in quality as has been shown here in former years. In Silver Penciled Wyandottes I noted the 1st cockerel and 2d pullet shown by Mr. Dennis Shea. Mr. Shea was formerly poultryman for Mr. E. G. Wyckoff, and is now in business for himself and will breed Silver Penciled Wyandottes and Single Comb White Leghorns.

Evidently Dominiques are becoming more popular, for there were eight pens and twenty-five single entries, sixty-five birds in all. Dominique breeders must not confuse the Dominique type which is anything but a Plymouth Rock. The Dominique is much smaller, the Standard calling for birds a pound and a half less than the Plymouth Rocks, with shorter bodies and backs, and a longer tail that is well furnished with sickle feathers.

E. T. De Graff had everything pretty much his own way in Single Comb Rhode Island Reds, winning every 1st, 2d, 3d, 4th and 5th prize excepting 5th hen. In Rose Comb Rhode Island Reds Ellenwood Farm, Geo. W. Tracy, Mgr., managed to win all the firsts and seconds excepting 2d on pen of young and old, which went to E. T. DeGraff. Usually the Rose Comb Reds are very deficient in type, being inclined toward the Wyandotte. This could hardly be said of the exhibit here which was first class in every respect.

Brahmas and Cochins were small classes and about the average quality as usually shown here.

Some first class Black and White Langshans were shown. If there is any breed that is more magnificent than this I do not recall it. When of good quality and well shown they usually attract plenty of attention.

Leghorn classes were better than have been shown here than in former years. This is particularly true of Single Comb Brown and Rose Comb Whites and Blacks and Single Comb Buffs. Rose Comb Browns were about the same as usual, and Single Comb Whites lacked only in numbers. In the Single Comb Browns 1st cock, 1st hen, 1st cockerel, 1st and 2d pullets were all far and ahead of the average quality. The same can be said of the winners in the cockerel and Pullet classes of Single Comb Whites, the winning Black cock, cockerel and pullet, the winning pen of old and young, hen, cockerel and pullet in Buffs.

The Minorca exhibit was better than made here before. In Single Comb Blacks, Mr. T. A. Faulds was unusually successful, with as good a string as has been penned at any show by one exhibitor. The young birds shown by him were well developed and above the average that is seen at our best Winter shows. Rose Comb Blacks were another good class and brougnt out some unusually well developed young and old stock that were in good condition, considering the time of the year.

Since the days of Daniel E. Pinckney, as an exhibitor of Houdans at the State Fair, they have continued to be an interesting class and this year was not any exception. Houdan breeders are doing effective work in advertising the practical qualities of this great breed and they are becoming more popular each season.

Another French breed that attracts the public is the La Fleche, of which a good exhibit has been shown here the past few years.

Dorkings were not as strong as they usually are. Why it is that the Dorking is neglected and other breeds of considerably less merit prosper, is something I cannot understand. Contrary to the general opinion, they are not hard to raise. They are good layers, the best of table fowls and easily confined, making a first class fowl for the fancier who is limited for yard room.

Black, Buff and White Orpingtons were well filled classes and brought out some birds of more than average quality. The Blacks continue to have it on the other varieties so far as breed, character and shape are concerned, but it must be admitted that the Whites have been making wonderful progress in the last two years.

List of awards continued from last issue.

* * *

There is a fascination in showing birds and taking a prize from a dozen competitors. Moral: Get busy for the next show.

Nest boxes should be put in the most secluded and darkest part of the house.

The earth floor is considered better than a wooden one, for the latter is usually damp.

Don't have holes in the side of your hen house, and you will not have a hole in your pocket.

The present prices being paid for standard-bred stock, makes poultry raising a business of pleasure and profit.

The constantly increasing demand for beef scraps has caused the price to advance to almost a prohibtive figure.

WHITE LANGSHAN
Owned by A. F. Brockschmidt, Freistatt, Mo.

The AMERICAN FANCIER

ESTABLISHED 1893.

A Magazine devoted to Standard-Bred Poultry and Pigeons.

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations.

Expirations—Paper is discontinued at completion of subscription term. If a subscriber wishes a subscription continued he must notify this office and send the amount in payment for same. Renewal should be made at once to avoid missing a number.

Change of Address—When writing to change address, the old one must be given as well as the new.

ADVERTISING RATES

10 cents a line, 7 words to the line; $1.40 per inch, 14 lines to the inch.

DISCOUNTS—5% for 6 times (3 momths), 10% for 12 times (6 months), 15% for 18 times (9 months), 20% for 24 times (12 months).

The following shows the cost of a one, two and four inch ad. after deducting discounts.

	1 Time	1 Month (2 times)	2 Months (4 times)	3 Months (6 times)	6 Months (12 times)	9 Months (18 times)	12 Months (24 times(
1 inch	$1.40	$2.80	$5.60	$7.98	$15.12	$21.42	$26.88
2 inches	2.80	5.60	11.20	15.96	30.24	42.84	53.76
4 inches	5.60	11.20	22.40	31.92	60.48	85.68	107.52

CLASSIFIED ADVERTISING RATES

25 words or less, 1 time, 50 cents; 12 consecutive times (6 mos.), $5.00; 24 consecutive times (1 year), $8.00. Additional words 2 cents each per issue. Numbers and initials count as words. **Terms: Cash with order.** The wording of the ad. can be changed as often as you wish. Forms close on the 9th and 24th of each month.

The American News Co. have charge of retailing the paper over the news stands throughout the United States.

Published by

LEONARD W. LOTT & CO., :: :: 30 CHURCH STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

The illustration on cover page of this issue is made from a photograph taken by an amateur, and shows a male Silver Laced Wyandotte owned by Samson & Alden, Kirkwood, N. Y. The saddle on this bird is remarkable and nearly every feather has a clean silver edge, with a well defined black stripe through each feather. The mother of this bird is five years old and as clear as the cleanest of pullets, while he is laced with clear open center feathers without a break and no frosting. He is true Wyandotte type throughout and recalls to mind the little verse composed by Messrs. Samson & Alden:

"Bred to win and bred to lay,
Bred to Wyandotte type in every way.

* * *

The two Springfield Poultry Associations have combined into one organization and will hold a show this season.

* * *

The new bi-weekly poultry paper, *The Standard,* published at Quincy, Ills., under the management of F. C. Hare, is up to all expectations, and has our best wishes for success.

* * *

At the last Wichita (Kansas) Fair over 2,500 birds were exhibited, representing seventy-five varieties, of which the Rhode Island Reds led in number.

* * *

This morning's mail brings us the premium list of the Augusta Poultry Association, and on the cover page is printed a striking likeness of that true fancier and energetic worker for the advancement of pure bred poultry, Dr. W. C. Cleckley, President of the Augusta Poultry Association.

* * *

Judge W. C. Denny's report for Allentown Show has not arrived up to the time this issue goes to press, and therefore it will be published in our next number. This issue contains the complete list of awards and we know our readers will look forward to Judge Denny's report on the exhibition.

The Allentown Show was a great success and Mr. W. Theo. Wittman, Supt., and Messrs. R. S. Brown and H. Edleman of the Pigeon Department, are to be congratulated. The fee at $1.00 brought out an entry of about 2,200 poultry and over 600 pigeons and pet stock. Both the new and old buildings were used and it was absolutely necessary to have coops three tiers high. The arrangement was excellent and far superior to that of many of the leading shows. Judge Trexier, of legal profession, and not poultry knowledge, selected a Black Leghorn cockerel for the handsomest bird in the show. The able management and popularity of Mr. Wittman saved the Allentown Fair, for if it had not been for the poultry and pigeons, receipts would be less than in 1907. We understand that there was a falling off in all the departments but the poultry and pigeon show, and we must also remember that these exhibits have long been neglected and slighted by the Allentown Fair until the present time, when Mr. Wittman, through clever management, has brought them up to the front as the leading exhibits. It was last year that they listened to the voice of reason and gave the poultry and pigeons a show, and this year it has saved the Fair from a downward movement. Credit is due to Messrs. Witman, Brown and Edleman and the Allentown Fanciers' Association who worked with a will that knew no let-up.

* * *

In investigations made by the Farmer's Institute force of the Colorado Agricultural College it was found that while the Colorado poultrymen who were making money from egg production fed various combinations of grains, all had similar methods in several particulars.

All the successful poultrymen consulted gave all feed dry. Not one was found who is feeding a wet mash at any time during the year. Grains, vegetables, alfalfa and meats are at all times fed dry.

All the successful poultrymen feed afalfa; many of them every day in the year. Some feed alfalfa meal; some alfalfa leaves, and others alfafa hay, allowing the hens to pick off the leaves and reject the stems.

While alfalfa is growing, the green plant is preferred for feed.

Afalfa colors the yolk the dark orange that the high priced market demands; it furnishes an appetizing, healthful roughage, supplies material needed in the formation of the egg, is a mild laxative, and is good aid in keeping the hen in active, working condtion.

All our successful poultrymen feed meat meal. Many of them keep it in self-feeding hoppers, always before the hens, where they can eat it at will. Meat meal seems to be essential to profitable egg production in Colorado. A few use green bone instead. An ample supply of animal material in some form is necessary. Some of our poultrymen may feed a limited quantity of meat meal and a liberal supply of skim milk or curd.

A variety of grain is fed. Wheat forms from one-third to one-half the grain fed by most of our poultrymen. Many feed Kaffir corn. Bald barley is used considerably and field peas improve the flavor and quality of both eggs and meat.

Dr. J. W. Downey states that nine-tenths of the total grain feed given his hens during the year is oats. Professor Chambers feeds wheat, corn, bran, alfalfa, shorts, linseed meal and meat meal. Most poultrymen find that the largest egg yield and the most money are secured when a variety of grains is fed.

Meriden, Conn.

A meeting of the pit game breeders of this and neighboring cities was held at the residence of W. H. Gough, secretary of the Meriden Poultry Association, last evening. The meeting was held for the purpose of forming a national club. A large number was present and a very enthusiastic meeting was held. The following officers were elected:

President, Frank A. Clarke, East Haddam; General Vice-President, James A. Carter, Meriden; State Vice-President, Joel Paddock, Meriden; Secretary and Treasurer, William F. Liedtke, Meriden; Executive Committee, Arthur Ives, Meriden; John J. Hall, Rocky Hill; William Bahr, Meriden.

It was decided to hold the first annual meeting during the week of the Meriden show. The club will offer a silver cup to be competed for by its members, and also several handsome badges. It is expected that the largest exhibit of pit games ever made in the country will be seen in Meriden Christmas week, during the Meriden poultry show. This is the first pit game club ever formed, and many interesting letters were read from prominent pit game breeders, who were unable to be present at the meeting.

The officers elected at this meeting will hold office until the meeting next December, date of same to be decided and announced later.

A set of by-laws were adopted and same will be published later.

Full information regarding the club will be furnished on request by Secretary William F. Liedtke, Meriden, Conn.

The Central Ohio Poultry Association at their last meeting elected the following officers: President, John Houston; Vice-President, Harry V. Pool; Treasurer, John A. Mayar; Supt., C. L. Mechling; Asst Supt., Al. Wolf; Secretary, Dr. L. J. Chapman. G. T. Campbell, Judge. Dates, January 8 to 11, '09.

* * *

Keokuk, Iowa, First Annual Exhibition, November 24-28.

This is to be our first show but it is going to be a good one. The prospects are that we will have an exhibit of over 700 birds. The cash prizes offered are $2.00 for first and $1.00 for second for breeding pens; $1.00 for first and 50 cents for second on singles. In addition to the cash prizes we are offering eight handsome silver cups and a number of other valuable articles, such as incubators, brooders, etc., to be awarded as special premiums. Premium ribbons will be awarded to first, second and third prize winners. All prizes will be given without any string attached; will be paid to the winning parties and become the property of the owner without any further effort.

As this is one of the first shows of the season it will pay all breeders within shipping distance, to send their stock here. It will be good advertising for them and they will be better prepared to sell exhibition stock for the later shows. W. S. Russell, of Ottumwa, Iowa, will judge the show, which gives us the assurance that the awards will be properly placed. A score card by Russell and a premium ribbon from our show will be worth having.

Our premium list will be ready for distribution about October 15th. It will be one of the neatest and most attractive lists ever gotten out in this section, and should be in the hands of every breeder. For premium list and further information, address Chas. C. Lawson, Secretary Tri-State Poultry and Pet Stock Association.

* * *

We are informed that a large poultry fattening establishment is being erected at Tampico, Ills. The plant will have a capacity of about 6,000 birds.

* * *

Potatoes, beets and carrots are excellent Winter poultry food.

* * *

Elmira, N. Y.,

Will hold its annual show January 5th to 8th. Harry H. Hays is secretary of the Elmira Poultry Association.

* * *

The Rose Comb Barred Rock will make its debut at the coming Dairy Show, England. The entry has been accepted by the show management.

* * *

To All Breeders of Games and Game Bantams.

By vote of the members of the American Exhibition Game and Game Bantam Club, which closed on September 30, Mr. William H. Congdon of Providence, R. I., has been elected to Judge the classes in these varieties at their next Club show to be held with the Boston Show, January 12 to 16, 1909.

Contributions to the Club fund have been very liberal this year, which enables us to offer more and larger money specials than ever. An innovation will be introduced by placing some of the money upon each of the five winners in their classes instead of allowing the whole amount to go to the first prize winner. There will be handsome ribbons also, and several members have designated where their specials shall go insuring that everybody will be well taken care of if only they show quality. The annual meeting will be held at the Boston Show on January 14 at three P. M. Several important matters are to be gone over which pertain to the prosperity of the Club, and it is very much desired that a full membership be present. The stately Game Bantam has never been so popular as at the present time and the Standard Games are coming on again. There is more call for good birds in these birds than breeders are able to fill, and everyone interested in the fancy should become a member of this Club. The advantages are so many and the cost so small. Already more applications have been received than at any similar period in the Club's history. Let every member talk "Club" and come to the Club Show and bring his "high-steppers" and we shall have another old-fashioned jollification. Fraternally yours, Dr. S. J. Fairbank, Secretary and Treasurer.

Pigeons in Canada

(Continued from last issue.)

Rollers are really the most popular variety of pigeons kept in Canada. The fame of Toronto Rollers has gone all over the United States. It is to be regretted that the Roller men, in the past few years, have sacrificed the tumbling propensities of their birds to the length of time they stay on the wing. As a result they have developed a very high flying bird that rolls very little, but flies for several hours at a time. They do not fly long enough to give the Tipplers a contest, and they do not perform enough to be reckoned good Rollers. I never saw a West of England Tumbler, but I should think the Toronto Roller is very much like it.

In conclusion, I wish to say a word about an expression that I frequently notice in the advertising columns of the English pigeon papers. "Selling out! Going to Canada!" One might just as well say, "Clearing my racing Homers! Going to Yorkshire!" Good heavens, Madam, if a man wants pigeons anywhere on earth he wants them in Canada! Not only does he want them, but we want them. If he is going to be a pioneer in the Far West, what will soften the asperities of his rough toil more than his favorite pigeons? In what will he take more delight? Of course, he will not be able to send them to many shows, but if he is a real fancier he will take a pleasure in looking at them, and what memories of the good old days "at 'ome" will they not recall!

If he is not going to rough it, he will not strike a town where he will not meet a fancier, nor where his pigeons will not attract general interest. It seems to me that when a man is striking out in a new world, in strange and perhaps hostile surroundings, that is the time he should cherish a hobby, as long as it falls short of being an obsession, to estrange him from his fellows and unfit him for the duties that lie to his hand. There is no part of Canada that a white man can live in that an Oriental Frill cannot live in, and any Englishman who can earn his own feed can surely earn his pigeons' corn. Let the Englishmen bring their pigeons and their chickens and their dogs with them, and they will be all the happier, and we shalll not be less glad to welcome them. —*Feathered World*, England.

Awards at New York State Fair, Syracuse

* * *

Ice the squabs well before shipping. Send the next lot of squabs to market in better shape than the last.

Never grease a setting hen; grease getting on the eggshells will close the pores and smother the embryo chickens.

While pigeons are feeding their young great care must be observed in keeping them well supplied with food, for no food for the old birds means starvation for the young.

ORIENTAL FRILLS AND MAGPIES :: **Wm. Ehinger**

BUFF WYANDOTTES EXCLUSIVELY. To make room for young stock will sell 4 good cocks and hens cheap. These birds will come in good for the Fall fairs; also a few cockerels and Pullets after Aug. 15th. C. W. Augenstein, 99 Weldon St., Rochester, N. Y.

WORKING EXHIBITION BUFF WYANdottes. Two hens $1.25; both $3.75. Hen $1.50; two yearlings $2; both $3.75; whole lot $7.50, or, express prepaid within 500-mile radius, $8.75. Are all healthy, good layers and good color, from solid buff stock. Write your wants. Eyriemaere Yards, 1301 E. Wayne St., Ft. Wayne, Ind.

BUFF WYANDOTTE SALE—FORTY OF the females from my this year's breeding pens for sale to make room for young stock. This is your opportunity to get some good breeders cheap. J. H. Scott, Auburn, N. Y., R. D. 9.

HALPIN'S WHITE WYANDOTTES ARE frost proof layers, therefore they are great profit layers. They have won again at the great Rochester Show. I put this in the Fancier so you could know eggs are $1.50 per 15. Send for circular. E. M. Halpin, Mortimer, N. Y.

COLUMBIAN WYANDOTTES EXCLUsively At Rochester, N. Y. Shows of '07 and '08 won seven first, second and third prizes and all specials. No better Columbians obtainable. Eggs in season. L. C. Pope, 270 Alexander St., Rochester, N. Y.

SILVER AND GOLDEN LACED WYANdottes. Both stock and eggs; an old established strain, line bred 15 years; are unequaled in the show room or as layers of large, brown eggs; large, vigorous birds; true Wyandotte shape; satisfaction guaranteed; Eggs, $3.00 per set; stock a matter of correspondence. Joseph L. Shull, Gloversville, N. Y.

GEO. COOKINGHAM, PHILMONT, N. Y. Breeder of Columbian Wyandottes; winners wherever shown. At the recent Hudson, N. Y. Show, with one entry won first pen fowls, while many birds of my breeding won at the same shows in the hands of my customers; can sell good breeders; Eggs, $3.00 per setting.

WHITE WYANDOTTE EGGS FOR hatching from my Rochester winner, $5.00 per setting; orders booked now when a small deposit is made; twenty-five head of White Wyandotte Hens, twenty-five White Wyandotte pullets and twenty White Leghorn Hens for sale; if not satisfactory, money paid refunded, less express charges. Edw. F. Greth, Niagara and Oneail Street, Buffalo, N. Y.

OUR BUFF WYANDOTTES HAVE WON at some of the largest shows in several states this season, also at the great Montreal, Que. show. 1908 catalogue, the most complete booklet ever published by breeders of this grand variety will be mailed free to any address. C. F. Smithers & Co., Heuvelton, N. Y.

BUFF WYANDOTTE COCKERELS AT half their value to immediate buyers; sired by 1st Cockerel at Pittsburg and 2d Cock at Buffalo; eggs from two grand pens that will produce you winners at $2 per 13; $5 per 45; order at once. B. L. Waite, West Valley, N. Y.

OAKVALE YARDS — WINNINGS AT Auburn, 1908, Columbians—4 firsts, 1 second, 5 Specials. Buffs—1st Cockerel and Colored Special (one entry). Our Buff and Columbian Wyandottes have also won more firsts than all competitors combined at Holyoke, Mass., Gouverneur and Heuvelton; mating list. E. S. Wilson, So. Hammond, N. Y.

COLUMBIAN AND WHITE WYANdottes. Eggs from our Blue Ribbon Winners at great Rochester Show of 1907 and 1908 at one-half price from May 15th. Handsome catalogue and mating list free. High quality stock for sale. Satisfaction guaranteed. L. B. Sweet, Perry, N. Y.

FELL'S WHITE WYANDOTTES. HAVE won the $100 Challenge Cup at Scranton two years in succession. Five firsts at Wilmington, Del., two silver cups. Eggs from the four best pens ever put together, now $2 per 15; $5 per 45. Special sale of yearlings now on. A. J. Fell, Box A., West Point, Pa.

WYANDOTTES — IDEAL IN SHAPE, pure in color—the stay-white kind. A combination of show winners and egg producers. A few breeders for sale at $1.25 each. Some grand cockerels. I will sell you Wyandottes that will please you and send them on approval. After June 1st eggs at half price. Mrs. H. A. McClintock, Livonia, N. Y.

BUFF WYANDOTTES—TWENTY HIGH grade hens to sell for moderate prices. 50 good breeding hens and pullets for $2 each. One solid buff male for $12. My "Guide to Breeding Good Buffs," postpaid, 25 cents. Catalogue for the asking. Dr. W. N. Sanborn, Box 866, Bellingham, Mass.

WOULD YOU BUY SOME WHITE OR Buff Wyandottes, if you knew you could get just what you want? I have some good ones that will be sold for about half their real value to a quick buyer, to make room for youngsters; write and be convinced. W. G. Hale, Batsto, N. J.

PARTRIDGE WYANDOTTES HAVE WON WHEREVER SHOWN. J. F. TALLINGER, BARNARD, N. Y.

QUALITY SILVER LACED WYANdottes; layers and winners; sixty regular prizes at Auburn, Rochester, Johnstown, Buffalo, Waterloo and New York State Fair; specials for best exhibit, any variety of Wyandottes at Great Rochester Show, 1908; breeding and exhibition stock at bargain prices. FEED
TEN CENTS PER BUSHEL

PATENT PENDING

Is your main feed for growing chicks and making eggs costing you more than 10 to 15 cents per bushel? Have you raised 95 per cent of all chicks hatched this season? Can you care for 2000 layers and raise 3000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how I do it. My new book, **"Profits in Poultry Keeping Solved,"** will tell you how to do it, as well as save you $25 on every 100 chicks you grow to maturity. My third edition of 5000 copies now ready. 3000 Single Comb White Leghorns and White Wyandotte chicks growing under my new system for the fall trade. :: :: :: ::

WINNERS
Chiefly 'dots and dux, Stock Birds, Including Geese.

EDWIN H. MORRIS, Sparkill, N. Y.

To Whom It May Concern.

I understand that a young Pekin drake I entered at the Allentown Fair Poultry Show was disqualified as being an old drake, and that the report was circulated among the breeders that I had entered an old bird for a young one. I hereby wish to denounce such accusation as false, and hereby certify that the drake was a young one, hatched this season (1908) and that said drake was bred and raised by myself on our own place, and that I can give satisfactory proof to the effect that the drake is a young one; and challenge anyone to give proof that the drake is otherwise than a young (1908) bird.

Signed, LE ROY W. SEIGFRIED,
Waterloo, N. Y.

Dated Oct. 6, 1908.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder.

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

HAGERSTOWN, 1901. Entered six birds, got six prizes, including two first.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PENBROOKE, MAINE

President American Houdan Club, From 1900 to 1907.

VOL. XXXVIII NEW YORK CITY, NOVEMBER 1, 1908 No. 714

Exhibition Poultry for Beginners.

By the Rev. J. N. Williams, B. A.

(All rights reserved.)

I PROPOSE, in a short manner, to give a few articles as a guide to beginners. As a rule novices are not the earnest readers they might and should be. But I will try to induce them to a little reading by keeping the chapters short, the paragraphs distinct, and the sentences crisp; in a word, I am prepared to sacrifice literary style to brevity and clearness.

How to Begin.

From one point of view the beginning is generally made for a youngster by his taking a great fancy to some particularly breed of fowl, probably seen at some exhibition or other. It is no use his beginning unless he has an ardent fancy for the kind—to force himself to something he does not care for is death to his enthusiasm. It may not pay, probably for some time will not pay. Perhaps it may never pay directly. Never mind. Experience has to be bought with money, industry, patience and study. It might as well be bought on something you are in love with as with something you have no interest in. The struggle will be harder, longer maintained, on something liked, rather than on disinteresting breeds. With advance knowledge will probably come

A Change.

The actual breed of fowl may finally with you not be of anything like the importance that the making of money is. In that case you will look out for.

(1) The most popular breed.

(2) You will keep to that breed.

(3) Have an eye to the suitability of your situation, climate and size of run for it.

(4) Think over the problems of cartage and cost of food, the markets for surplus eggs and table birds, and any other matters which concern the dollars. Then having fixed upon the breed most likely under all the circumstances you will proceed to the

Buying of Stock.

This is a difficult matter for one without experience. It is better to pay a trustworthy breeder of experience something to buy for you. But what do you want? If you want merely to exhibit, then you must buy or get bought for you exhibition birds. This is easier than buying stock birds because a winner at a good show is generally a good bird. His price, however, may be high. Now the beginner is between two stools. Suppose him to have plenty of cash. He goes in for a long priced winner; does not know how to manage it; it dies, or he does not know how to prepare it for exhibition, and so it does not win and he is disappointed.

The Best Way

is probably to be content with a bird of about twelve or fifteen dollars, if you can afford to lose as much. Exhibit at the smaller shows. If beaten, learn all you can from the winners. Breed a year or two from your bird, and so gain experience against disease and in the management of chickens, whether in fair or foul weather. In a couple of years or less, if you commit the gist of these remarks to memory and learn by seeing the very best extant, you should become a capable judge, and be able to buy, at as long prices as your purse will afford, the best class of exhibition birds—it is merely the old advice over again—creep before you walk, and walk before you run—and, in case of birds, run before they fly. But if it be with the object of ultimately breeding, the buying of exhibition birds is a mistake in measure. You cannot understand why till you read the next chapter.

CHAPTER II.

The Rationale of Breeding.

We live in an age of dual breeding. What do we mean by this term? To put it shortly, we mean that we must have a separate pen of birds to breed the cocks; from the pen from which we breed the pullets. To breed the cocks, we want an exhibition cock, and sisters to good exhibition cocks. To breed the pullets we want good exhibition pullets, and brothers to good exhibition pullets. Is this so in all breeds? Pretty nearly so. But exception may be made sometimes, as in the self-colored breeds. Also in the campines. It is generally found that judges require both shape and color, so different in the cocks from the pullets, that two breeding pens are necessary. You are not bound to breed both exhibition cocks and exhibition hens. Single birds are shown nowadays, which relieves matters. But in the olden days when

A yard of Buff Wyandottes and their young attendant. There are twenty in this yard, all solid Buffs, seven of which have been exhibited and won the blue. Bred and owned by H. W. Hill, office 104 20th Street, Middleton. High Class Buff Wyandottes.

birds were shown in pairs (cock and hen), you bred the one and bought the other, as it is rather dangerous work for a beginner to have both sorts on his premises. Now having considered the fundamental principle, two things more must be kept in mind. Never cross strains of birds if you can help it. Make your own strain and keep to it. Breed father and daughter or grand-daughter, son or grandson and mother, but never brother and sister, unless you want to bring the size and constitution down. But more of this by and bye.

Two Plans.

When you have decided whether you will have a cock-breeding pen, or a pullet-breeding one. I have already shown you one way of proceeding, by getting an exhibition bird and the proper mates. But it is possible to breed prize birds from what are called stock birds. These would seldom, or never, win a prize. Another principle here is to choose birds, so that the faults in the cock are counteracted by great merit in the hen. Say that the cock has a bad lobe. The pullet, or hen (hen preferred much), must be superexcellent in lobe. If the cock has a good comb the hen may be a little weak. But of course

In Mating

the more points you can get perfect on them both the better for your results. Still it is possible a good chicken could be got from two rank duffers which chanced to fit. When such a bird does come, through faults being crossed with merits, he is not so reliable to breed from as if both parents had contained many merits.

So that in buying it is necessary to know and understand what it is that is required to produce good chickens. In my next I will go further into strain, but have said enough now.

Poultry Culture

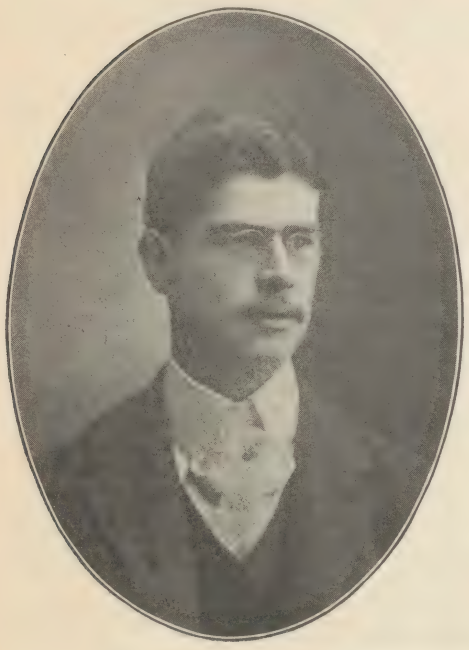
By Angier L. Goodwin

POULTRY culture is just as much a science as agriculture. It may, indeed, be called a well defined branch of the science of agriculture. It is a science in that it may be pursued by means of a set of known and established rules. It is a science, further, in that it is capable of indefinite study and research along its various lines. The above basic thought should be borne constantly in mind in a perusal of this treatise. This opening paper must be brief—so brief that there is opportunity to do hardly more than to make a tentative classificaion of the students of this science and to enumerate the characteristics necessary for success and the elements going into a proper preparation for launching into the arduous but fascinating experiences of poultry culture.

All poultry culturists may be divided into classes. A number of different classifications have been made, the most of which have, at least, the merit of logic. But for the purposes of this treatise, I have formulated the following classification, which I think will answer our purposes better than any other that could be made. I divide all poultry culturists into the following classes: First, those who keep poultry as an exclusive, or at least a chief business, and second, those who keep poultry in connection with another business. The first class may be sub-divided as follows: *a.*, those who keep poultry for utility purposes, that is marketing eggs and poultry for meat, and *b.*, those who keep poultry for fancy purposes, the selling of pure bred stock for breeding and eggs for hatching, and *c.*, those who combine utility and fancy. The second class is also capable of the following sub-division: *a.*, those who keep poultry in connection with an allied branch of agriculture, such as farming, fruit-growing, market-gardening, etc., and *b.*, those who keep poultry in connection with, or as a side-line to an established business or profession not directly connected with agricultural pursuits.

Although in the above classification there is a wide divergence of interests, and although nearly every class necessarily looks upon poultry-keeping from a different standpoint, yet a successful pursuit of the science of poultry culture necessitates exactly the same essentials and preparations from all.

Each class should approach the pursuit of poultry culture with the same preliminary training, and this training should include a good working knowledge of biology and natural science in order that the student may understand the physical makeup of the form of animal life with which he has to deal, the various phases of health, of sickness, etc.; of chemistry, in order that he may go about the mixing of feeds scientifically; of physiology and hygiene, in order that he may understand the action of various elements of food and their action upon digestion and nutrition and general health; of mechanics, in order that houses, yards, utensils, etc., may be put in proper order and kept in condition at least expense; of economics, in order that the laws of demand and supply and the theory and practice of markets may be understood; and teh rudiments, at least, of agriculture, since the two sciences necessarily overlap to a greater or less extent.



Entirely independent of any preliminary training or general education in elementary subjects as outlined above, a training which, although highly desirable, is not at all indispensible, there are certain characteristics which are absolutely necessary to the mental makeup of the student of poultry culture if he is to be successful in his labors. These characteristics may be enumerated as follows; first, a persistent stick-to-it-iveness, for success with poultry does not come in a minute nor in a year, and the poultryman must be able mentally to hang on during the time when the labor must be performed and the capital expended with only very limited returns; second, a genuine liking for poultry and a genuine interest in handling fowls and poultry-keeping equipment. Without this characteristic, the student will find that he can keep interested in his work only a very short time; third, the capacity to work hard, and often long hours, for he will be called upon often to perform various duties which may prove as difficult and laborious of performance as they were unexpected in turning up; fourth, that mental characteristic which enables a person to profit by mistakes and obviate the possibility of making the same error twice; fifth, ordinary good business judgment, which causes a person to go into the poultry business as carefully and thoughtfully and methodically as he would launch into any business venture, with attention to all details of equipment and maintenance and expenditure; sixth, a certain streak of originality or bent for experiment; it is this sort of characteristic which furnishes the poultryman with the inspiration to make experimental matings with the idea in view of bringing out a lot of chickens which shall combine the good qualities of two distinct strains, or with the idea of producing a strain of fowl with qualities peculiar to themselves, or having in mind any number of results which the careful and skilful and studious poultry culturist is constantly creating and weighing and debating and studying in his mind.

Equipped naturally with these characteristics, and fortified with a reason-

ably complete knowledge of the elements of some of the subjects already enumerated, the poultryman may take up his labors with a reasonably strong confidence that he will succeed. But as he goes about his work, he must bear in mind first, last and all the time, that he is not merely a worker or a laborer among poultry, but he is a *student* of poultry culture. For it is only by constantly bearing this fact in mind, that the fullest success can crown the poultryman's efforts.

And do not make the msitake of thinking that the above is only theory, and does not work out in practice. It does, and to prove it, ask any successful poultryman or fancier to account to you for his success, and he will tell you that he has been successful because he has not been content with knowing a *few* things about the business but by studious application has steadily increased his knowledge and experience. In other words he has been, and is, a student.

Perhaps the best argument of all that can be advanced in support of this contention is the fact that in nearly every instance, the patriarchs of the poultry business, when questioned, will say that the more they work among poultry, the more they study the various branches, the more do they become impressed with the magnitude of the great mass of knowledge which is still left undiscovered by human mind, and the almost unlimited field for study, research and experiment.

J. E. WILLMAITH

Amityville, N. Y., Breeder of Buff Wyandottes

The Rhode Island Poultry Association

Offers liberal prizes—$2.50 for first, $1.50 second, on single birds, and $4.00 first and $2.00 second on pens. The entry for single birds is only $1.00, and for pens $3.00. They also offer many specials.

* * *

"Not a Dream, But a Fact."

It is not a dream, but a fact, that the Quality Poultry Show of Scranton has no competitor in quality, management and wealth, for a show of its size. If it has been your good fortune to attend any of the Quality Poultry Shows of the past, you have heard very often the following remarks made by prominent fanciers and judges attending this show: "Where did they get them?" "They deserve the name of Quality Poultry Show." "There is quality in all the coops." "Did you read the list of solid silver Challenge Cups, Trophy Cups and large Cash Specials?" "How can they do it?" "Have they more brains than money?" "Is the blooming town full of coal barons trying to blow in their wealth?" "They always have the best of judges," and many other remarks pleasing to the management. Any of the stockholders would answer the above remarks in a few words. For the cause and pleasure, the Quality Poultry Show is run. Profit is the least thing considered. This corporation is run by eighty-one stockholders, who put up according to the size of their pocketbooks. They are coal barons, bankers, merchants, lawyers, bookkeepers, clerks, miners, mechanics, railroaders and laborers; poor and rich fanciers all working for the one cause—better poultry. You will make no mistake in sending your birds to the Quality Poultry Show. The judges who will place the awards are: Miss Sophia Pitchlynn, W. C. Denny, T. F. McGrew, B. W. Mosher, A. F. Pierce, W. Theo. Wittman and J. H. Wolsieffer. For premium list address A. W. Close, Post Office Building, Scranton, Pa.

The Allentown Poultry Show

By W. C. DENNEY, Judge

THE Allentown Poultry Show in connection with the Allentown Fair is about the classiest fall show held in America. Several years ago the management of the Allentown Fair—the great fair—turned to the Allentown Fanciers' Association for co-operation in the Poultry and Pigeon departments. They did not stop with this wise move, but, as success was added to each year's efforts, the Fair management has gradually withdrawn and left the poultry and pigeon men in complete control.

Allentown has a population of 40,000, and is the center of a thickly population in eastern Pennsylvania. In the past, through the fondness of its inhabitants for peanuts, which are displayed for sale in the front of the majority of the business houses, it has been called the "peanut town," but among the poultrymen who are familiar with it it is recognized as one of the best poultry communities in the country. The great Allentown Fair is one of the events of the year, and the people from Philadelphia to Wilkes-Barre, and from the border line of Jersey to Scranton are as loyal in their support as an enthusiastic mother about the baby show where she has a fine youngster on exhibition. The crowds come from all over and this year was one of the best in the history of the Fair; the total receipts amounting to more than $49,000, as against $52,000 in 1906—the record year.

In an endeavor to increase the prestige of the Allentown Show and improve the high quality of the exhibits, this year it was decided to increase the poultry entry fee from 50c to $1.00 for single birds, and from $2.50 to $5.00 on exhibition pens. While this was successful in increasing the quality of the birds, it did not keep down the numbers, for there were 400 entries more than last year in the poultry department. The entry fee for pigeons, which had been increased from 25c to 50c per bird, caused a falling off of over 600 birds, there being about 800 this year. The prizes on poultry were: First prize, $4.00; second prize, $2.00; third, fourth and fifth, ribbons. Exhibition Pens—first, $10.00; second, $5.00; third, fourth and fifth, ribbons. Pigeons—first, $1.50; second, 75c; third, fourth and fifth, ribbons.

Two years ago the main poultry building was remodeled and equipped throughout with Empire coops. The building is well lighted, the aisles are wide and the birds are protected by an iron railing about 24 inches from the coops. This railing also serves the purpose of forming an aisle for the judges and attendants. The poultry annex has been remodeled since last year, when it was used exclusively for water-fowls and turkeys. This year the Orpingtons and many of the Polish and Hamburgs, for lack of room in the main building, had to be cooped there.

More than fifty cups, aggregating in value more than $2,000, were offered for the winners. These were all displayed in a handsome case in the main building and proved to be an excellent attraction to the general public, as well as to the poultrymen who were competing for them.

Mr. W. Theo. Wittman, Supt. of Poultry, and Messrs. R. S. Brown and H. Edelman, Supts. of the Pigeon department, deserve much credit for the able manner in which their departments were managed. Mr. Wittman, who is on the staff of the regular contributors of the American Fancier, is well known as a popular judge and, in the past as a breeder of high-class Brown Leghorns. He has worked untiringly for the success of his department, and not a little of the credit of its success must go to him. Before leaving Allentown he advised me that his department had not yet reached its goal, and that he would continue in his efforts until it was acknowledged without question, to be to other fall shows what Madison Square Garden is to the winter shows. Both Mr. Edelman and Mr. Brown are ardent pigeon fanciers, but of late Mr. Brown has been "flirting with poultry, and the judge is now the possessor of some strictly high-class Black Orpington.

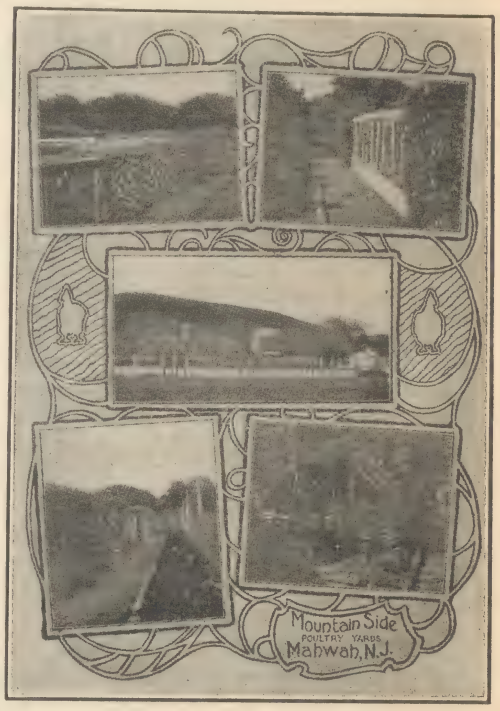
This year's poultry judges were W. B. Atherton, F. W. Corey, James Glasgow, J. F. Kirkpatrick, C. W. King and W. C. Denny. The pigeon judges were E. B. Ulrich and R. Sweisfurth. The judging was all completed on Wednesday and a marked catalogue issued and ready for sale on Thursday morning. Copies of the catalogue may be obtained for 30c from T. H. Weaver, 748 No. 9th street, Allentown.

A meeting of the Pennsylvania members of the American Poultry Association had been called for Wednesday of Fair week, and a large number attended with the idea of forming a State branch organization that would be influential, and representative of the Pennsylvania members. But what a jolt those who were not on the "inside" received when they attended the meeting, which was organized and run through with the dispatch that would have caused old-time and experienced politicians to "sit up and take notice." Those who are behind the movement can make up their minds that the Pennsylvania Branch has not added to its prestige through the methods under which the branch was organized and the officers elected at Allentown. The Pennsylvania State Branch cannot afford to be the tail of a kite to fly the aggrandizement of a few members, and influential members of the American Poultry Association were not slow to denounce the political methods employed in organizing this branch association.

Some extraordinary specimens were seen in the different classes, notably I. D. Koon's White Rock hen, Rock Hill Farm's White Wyandotte hen, H. F. Chase's Silver Wyandotte pullet, I. W. Schiebel's Single Comb Rhode Island Red cockerel, W. B. Bickell's Black Langshan pullet, Miss O. E. Remson's Black Minorca cock, Sunswick Farm's Buff Orpington cock and Black Orpington hen, "Duchess of Kent," who was awarded the special for the best bird in the show; and William Minnich's Silver Polish hen. These birds were not alone extraordinary specimens of their kind, but were shown in the finest imaginable condition and were fit to win in competition anywhere.

The Barred Plymouth Rock classes were considerably stronger, both in number and quality than last year, the old birds being in better feather and the youngsters further advanced. As a whole the class was more uniform; there was not so many birds with wide barring as I noticed a year ago. The winning cockerel has all the makings of a star and Mr. Riley is to be congratulated on producing such a superb specimen.

White Plymouth Rocks have always been strong at Allentown and this year was no exception. When such breeders as C. Burrows, J. D. Koons, Rock Hill Farm, Raymond Swab and Fairfield Farms are in the fight the fur is sure to fly. The gem of the class was the winning hen, admitted by all who were there, to be one of the best that has been shown. First and second cocks looked as though they were related, though the winner had no trouble in obtaining the decision because of his excellent Rock characteristics.



There were more Buff Plymouth Rocks than a year ago, thirty-four birds being shown in the open class. The quality of the winning cock was extraordinary and if Mr. Poley looks after him, as he knows how to, the readers of the American Fancier need not be surprised to hear of him winning elsewhere this season. The winning hen was grand in type, and showed considerable improvement over her last year's form and color. First prize pullet was much better than is usually seen at this time of the year and, if in condition would be a winner at many of the winter shows.

Silver Plymouth Rocks were a full class and contained many good birds, especially the females, which were very well penciled, the winning hen and pullet in particular.

Competition in Partridge Plymouth Rocks is increasing and it would not be surprising, with the growing interest that seems to exist, to find them outstripping the Partridge Wyandottes in a short time. They have made considerable improvement in type, and some birds of remarkably fine color have been exhibited. Here the winning cock was the champion bird of the class, an excellent specimen of good type and color.

In any other variety class were shown some Golden Barred Plymouth Rocks. Mr. Fotterall, who made the exhibit, should feel satisfied with the advancement they have made, the winning cock showing improvement over his last year's form, and the winning cockerel proves that his matings have been correct.

If the Wyandottes were strong a year ago, it would not be amiss to say that they were very strong this year, both in numbers and quality. The Silvers were a nice class, especially the females, from which the winning pullet stood out as easily being the best bird in the class. She had nice type, remarkable lacing and clear centers, especially in the back and wings. There were not quite so many Goldens as last year, but about the same in quality.

MOUNTAINSIDE LOFTS

Havemeyer Bros., Props., James Glasgow, Mgr. Mahwah, N. J.

The White Wyandotte class was excellent, seventy-seven single birds. Among the old birds were many that had won at New York, Scranton and elsewhere, and among the youngsters were some of the winners at the best shows that have been held this season. Nearly all were shown in good condition and it made a class that was a pleasure to handle. The battle was really between Rock Hill Farm and A. J. Fell, with Rock Hill getting somewhat the best of it. The first prize cock, first hen and first pullet and Mr. Fell's winning cockerel were such that any admirer of the breed could not fail but enthuse about them.

Buff Wyandottes were not so strong in numbers and hardly as good in quality as last year. Some nice colored birds were shown but a number were decidedly off in comb, so much so as to make them decidedly objectionable.

A small class of Black Wyandottes contained a remarkably fine cock bird, the same that won at Syracuse the week before.

The Partridge class was a fine one, containing many very nice birds. The

winning cock had good shape with rich color well striped in both saddle and hackle. He is one of the largest birds that has retained the Wyandotte type that I have ever handled. The winning hen had fine color, good penciling and a nice hackle. First cockerel was very well developed and in superb condition, rather dark in color, but has excellent stripes in saddle and hackle. The winning pullet was well developed and had very good color and penciling

Columbian Wyandottes always make a record at Allentown and this year they managed to do better than they have done before. There were forty-seven birds shown in the open class and it was a good lot all through. First cock was excellent in shape, nicely colored hackle and clean back. First hen has a good hackle and fine shape. The winning cockerel was very well developed for this time of year, has good hackle, wings and tail, off in comb, having lost spike. The winning pullet promises to be one of the best females that this variety has seen. She is grand in hackle, with an almost perfect wing and a very good tail, in addition to possessing excellent type.

Silver Penciled Wyandottes were fewer in numbers and not so good in quality as last year's.

Rhode Island Reds, both in single and Rose Comb, were exceedingly strong in numbers and quality. In fact, but few classes of as equal quality have been shown anywhere. In single comb, the cock birds were in rather poor condition. The winning hen was first class in both shape and color. First cockerel had the distinction of receiving special for the best youngster in the show, an unusual honor for the Red. He was well developed, in full feather, and excellent condition, with good color in addition. First pullet was very smooth and had rich, even color throughout. In Rose Combs the first hen was one of the best birds in the class, very strong in both shape and color. In both the Single and Rose Combs there were some young birds lacking only in development to keep them from being awarded places. Mr. Scheibel exhibited a Single Comb cockerel and Mr. Tracy a Rose Comb pullet that will surely be heard from later in the season.

Brahmas and Cochins did not appear to arouse any greater interest or enthusiasm than anywhere else, if the numbers shown are to be taken as an indication. A grand Light Brahma cock, some very fine Partridge Cochins and an excellent White Cochin hen were among the best that were shown.

Both Black and White Langshan classes brought out some birds of quality. The winning Black Langshan pullet and the White Langshan cock were both exceptional birds.

Brown Leghorns were a large class and contained some very fine specimens, particularly the winning hen. She was remarkably fine in color with excellent type.

White Leghorns were a smaller class and not as good quality as a year ago, while Buff Leghorns were an improvement. Among the winners I noted first hen, first cockerel and first pullet as being birds of exceptional merit.

'Tis seldom there is so much rivalry in a variety as was here in Black Leghorns. George Burns of Tillsonburg, Ontario, and Adam Noll of Allentown are two ardent fanciers of this variety and after being defeated by Mr. Burns last year, Mr. Noll made a wager of $50 that he would "turn the trick" this time. The wager was accepted and as a result a great deal of interest was centered in the class. It is seldom, if ever, that better Blacks were shown than the winners, the first prize hen and first cockerel, both owned by Mr. Noll, which won the wager, were easily the best of their kind that have been shown.

Black Minorcas came out strong, and after seeing the grand class at Syracuse the week before, makes me believe that this variety is coming back into popular favor. The winning cock was a grand bird, an easy winner. The winning hen a nice, large bird with good color.

There is no section of the country in which Orpingtons have more friends than right here, and the interest seemed to be about evenly divided between the Buffs, Blacks and Whites. In the Buffs, outside of the winning cock, the hens and pullets were the best classes, first, second and third hens being exceptionally strong. Blacks were the strongest class of the breed, the first, second and third cock being true Orpingtons, with fine color throughout. In hens was one of the best Orpingtons that has been shown. She is superb in shape and with exceedingly fine color throughout, has nice head points and good colored legs. Second, another good one, third an old-time winner, defeated for the first time through coarseness in head, a drooping of tail and inclined to be weak in color of wings. First cockerel a very typey bird, with nice color throughout.

In White Orpingtons the winning hen and first prize cockerel were the excellent specimens.

RABBITS—Angora, any color, male—C. H. Ellard 1; G. Seymour Bedell 2. Himalayan, male—C. H. Ellard 1. Flemish Giant, male—C. H. Ellard 1, 2. F. G. female—C. H. Ellard 1, 2. Tans, mae—C. H. Ellard 1. T. female—C. H. Ellard 1. Any other color, male—C. H. Ellard 1. Female—C. H. Ellard 1. Doe and litter—C. H. Ellard 1.

BELGIAN HARES—Adult—J. Riesbeck 1. Female—J. Riesbeck 1, 2. Under six months, male—J. Riesbeck 1, 2. Female—J. Riesbeck 1; G. Murman 2.

EXHIBIT OF EGGS—12 brown hen's eggs—Robert Seaman 1; Mrs. F. H. Stevens 2. 12 white hen's eggs—John J. Hicks 1.

Office of the President of theNational White Wyandotte Club.

West Orange, N. J., October 23, 1908.

To the Editor of THE AMERICAN FANCIER:

Dear Sir: Immediately upon reading the article in the *Reliable Poultry Journal* entitled "Wrongful Practices," in which artice the editor of said paper stated that the *Journal* had been compelled to refuse further advertising from Mr. W. K. Graves, of Southboro, Mass., I notified the executive committee of our club that it must proceed to investigate the truth or falsity of said article; that if a *prima facie* case was made out against Mr. Graves, who was formerly president of our club and is now a member thereof, charges would be preferred against him and he would be given a hearing on such charges, and, if found guilty, would be expelled. If, on the other hand, Mr. Graves was found innocent of said charges, or if on investigation such charges did not prove true. some action would be taken by the club in reference thereto.

I should be glad if you would publish this letter in your paper. for I desire, as president of the club, to say that my policy will be that, where charges are made against any of the members of our club, either in the poultry press or otherwise, such charges will be promptly investigated, and if they prove unfounded I shall endeavor to see that some action is taken, either by the member wrongfully accused or by the club itself, to punish the person making the false accusation. If, on the other hand, investigation discloses that any one of our members has been guilty of any wrongful act, he will be expelled after being given an opportunity to defend himself. I am convinced that the club not only owes a duty to its members but also to the public, and that prompt action must be aken wherever evidence is found of wrongdoing.

In the present case Mr. Graves will of course be given the usual presumption of innocence until proven guilty, and he has as much right to call for an investigation by the executive committee of our club as I have to order that the investigation go forward.

I have received from Mr. Graves a communication asking that the fullest investigation be made at once, and the executive committee is already engaged in this matter.

Yours very truly,

CHARLES D. CLEVELAND.

Providence, R. I.

The 23d annual exhibition of the Rhode Island Poultry Association will be held Dec. 1st to 5th, 1908, inclusive, and from present indications promises to be the best of any yet held. The Partridge Wyandotte Club will hold its club meet with us and we have a fine lot of Specials hung up for this breed. C. A. Ballow will judge this class. The Barred Plymouth Rocks and White Wyandottes have attractive Specials offered and other breeds, such as the White and Buff Rocks, Buff Wyandottes and R. I. Reds, as well as some others, are well taken care of in the way of Specials. Premium lists will be out Oct 15. In addition to Ballow we will have for judges on poultry J. F. Watson, D. J. Lambert, A. C. Smith. F. W. Rogers and W. H. Congdon. F. W. Gorse will judge the pigeons. W. I. Brown, Secretary, Providence, R. I.

The Big Boston Show.

From present indications every foot of the five acres of floor space in the big Mechanics building will be utilized by the Boston Show, January 12 to 16. Every mail brings applications for premium lists and entry blanks, a great number coming from breeders who never have shown here before. One special recently received is $50 in cash for best cock, hen, cockerel, pullet and pen of White Wyandottes. A handsome new $50 Parker gun is offered on Polish, besides many cash specials, and the fact that the American Polish Club is to meet here is sure to bring out a big display of crested fowls. The American Exhibition Game and Game Bantam Club will offer a big list of specials as this will be the annual meet of the cub. The American Plymouth Rock Club has voted to hold their annual meeting at Boston and word has just been received that the National Langshan Club has voted to come to the Hub for their annual meet. The Hamburg Club will rally at Boston and offer a good list of specials; also the New Engand Light Brahma Cub. Several other clubs are casting their ballots and will likely select Boston as the meeting place.

The list of judges is not yet complete, but those already engaged are Sharp Butterfield, who will handle the Dorkings and several other varieties; F. H. Bryant, Pit Games; H. S. Ball, C. A. Ballou, J. M. Cutting, Geo. V. Fletcher, Julius Frank will take the Hamburgs again; Richard Oke will handle several varieties; Miss Pitchlynn will for the second time place the ribbons on the Brown Leghorns; F. W. Rogers will take the other Leghorns; M. V. Caldwell will have the Polish; F. W. Corey is down for White Wyandottes; T. F. Rigg, Rhode Island Reds and Houdans; C. H. Welles comes again to place the awards on Barred Rocks, and H. B. Schwab will take the White and Buff Rocks. The Exhibition Game and Game Bantam Club has selected W. H. Congdon for their breeds.

Premium lists may be obtained by addressing Boston Poultry Association, 30 Broad street, Boston, Mass.

Cleveland, Ohio.

Three hundred and ten feet long by one hundred and twenty feet wide.

This is the ground floor space of the Cleveland Central Armory, where the Big Poultry Show is to be held, Jan. 25 to 29, 1909. It is a mammoth structure, right in the heart of the city.

The last three Cleveland shows have been record breakers, the 1908 show being so large that the building was outgrown and this year the Central Armory will be used.

Cleveland is one of the successful show cities. The club is composed, not so much of poultry raisers as of real fanciers of all kinds of pet stock. Its stockholders comprise many of Cleveland's best and most widely known business men. The policy of the company is to make a show pay, and it does this as in few other cities, but at the same time a show must be given even if each one has to put up to make it go. "Let's have a show for the good of the sport and for the fun we get out of it," is the spirit that has spelled success.

Cleveland always pays its premiums and always will. It is a good place to show, because competition is keen but clean, and every one is made welcome.

A big feature this year will be the ponies. This was successfully tried last year. This year will see a big increase in entries. Dogs, cats, pigeons, Belgian hares and all kinds of poultry will fill the place with entries and will bring the people out.

Space has been rented to a big moving picture show. This serves the double purpose of helping pay expenses and providing a resting place for people when tired of walking. Pictures will be changed daily and will be selected to interest a poultry crowd.

Some of the best judges have been secured. They are, Chas. McClave, W. C. Stanfield, J. H. Drevenstedt, M. S. Gardner, Thos. Faulkner, Phil Feil, Supt. Eugene Stites.

Particulars can be had of J. T. Conkey, Secretary, Cleveland, Ohio.

The Blue Island Show.

The Seventh Annual Show of the Northeastern Illinois Fanciers' Association will be held Jan. 14-20, 1909. at Saenger Hall, Blue Island, Ill. Exhibition coops will be furnished to exhibitors, as this association owns their coops. Premiums have always been paid in full and will be at the coming show. Mr. Frank Heck will place the awards on poultry and Mr. T. B. McCauley on pigeons. There will be a special department for Cavies, rabbits, etc. For premium list write to the secretary, A. W. T. Doermann, Blue Island, Ill.

Silver Penciled Rock Club

Was formed at Madison Square Garden, Dec. 19th, 1908. Mr. W. Theo. Wittman was elected temporary chairman, Mr. Wm. F. Fotterall, secretary. Wm. Wittman then stated the object of the club was to promote and push forward this beautiful variety, and give them the proper standing; that their good qualities entitled them to in the Rock family. The club then proceeded to elect officers for 1908. President, Gen. E. A. McAlpin; first vice-president, Hon. E. A. Weimer; second vice-president, W. Theo. Wittman; secretary, Wm. F. Fotterall. The next meeting of the club will be held at Madison Square Garden, Thursday, December 31. There will be some valuable silver cups and handsome ribbons offered for cock, hen, cockerel and pullet. Those wishing to become members of the club can do so by sending $2 to Wm. F. Fotterall, secretary, Oakford, Pa.

The Western Connecticut Poultry Association of Danbury, Conn.,

Will hold its 13th Annual Show in the new state Armory, Dec. 9, 10, 11 and 12, 1908. Premiums—1st, $1.50 and Blue Ribbon; 2d, $1 and Red Ribbon; 3d, 50c and Ribbon; 4th, Ribbon. Entry fee, 50c single class; $1.50 pens. Write for premium list, out about November 5th. Grand Specials. Premium paid last day of show. Address Howard H. Mignerey, Secretary-Treasurer, P. O. Box 171, Danbury, Conn.

West Haven Show.

The premium list of the West Haven Poultry Association is now ready for distribution and will be mailed to any intending exhibitor on request. The committee this year has had ample material, and has scattered gold pieces and silverware, cups and valuable merchandise with a free hand, which ought to attract a large entry of high quality to our seventh annual show. Twenty dollars in gold to the exhibitor making largest entry in any variety, disqualified specimens not to count; $10 for second and $5 for third; also $5 for best Houdan; same for best S. C. Black Orpington, $6.50 for best White Rock pullet, and many others. With a comfortable balance in the treasury the patrons may expect a repetition of our previous record. namely "all premiums paid promptly." We have never skipped one. T. J. Reveley, secretary, East Haven, Conn.

Portsmouth, Ohio.

From Dec. 1st to 5th the Portsmouth Poultry and Pet Stock Co. will hold their exhibition. Prizes will be $2 for nrsts and $1 for seconds, with an entry fee of 25 cents. Secretary of the association is Mr. F. H. Shoenberger.

* * *

Peterboro, N. H.,

Will hold their next show from January 5th to 8th. C. A. Pierce and J. Fred Crangle will place the awards. C. W. Abbott is the secretary.

* * *

San Jose, Ills.,

Will hold their poultry show December 9th to 12th. Mr. Geo. B. Wiemer is secretary of the association.

* * *

Guilford, Conn.,

Will hold their third annual show Dec. 8th and 9th. Present indications point to a successful exhibition. The officers of the association are, Geo. W. Seward, President; Paul P. Ives, Secretary; H. S. Davis, Treasurer.

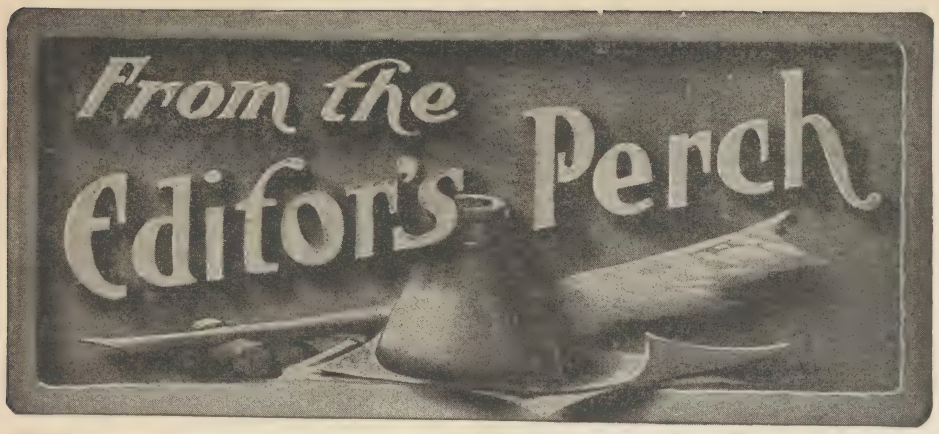
Paterson, N. J.

The two State Cups of the Rhode Island Red Club of America are offered at the Paterson, N. J., Poultry Show, Dec. 9-12, 1908. To compete for these cups the exhibitor must be a bona fide resident of New Jersey, a member of the club, and show his 1908 or 1909 receipt or furnish proof that the same has been paid, or become a member by sending one dollar to Geo. P. Coffin, Secretary, Freeport, Maine, on or before the 7th of December, 1908, to be in a position to compete for these handsome silver cups. On best display (points to count) in either one of the two varieties, the highest scoring display in the Single Comb R. I. Reds wins the cup alloted to that variety, and the highest scoring display in the Rose Comb R. I. Reds wins the Rose Comb Cup. There will also be awarded by the club handsome silk badges with breed medallions for the best shaped male, best shaped female, of S. C. Reds; best shaped male, best shaped female, R. C. Reds; best colored male and female, S. C. Reds; best colored male and female, R. C. Reds. These badges are open for competition to any member of the club, irrespective of State. The new Jersey Red breeder should put forth every effort to make this the banner display of their favorite breed in the East, and Red Alley should have the hottest competition. The Paterson Association is giving the largest premiums possible and have engaged Robert Seaman, the well known judge and breeder of Reds, whose ability and good judgment in placing the awards where they belong and give general satisfaction to exhibitors cannot be questioned.

A meeting of the State members will be held at the Paterson Show Thursday, Dec. 10th, and all members are requested to attend. The discourse of various matters pertaining to the advancement of the club and breed will be taken under consideration. The American Orpington Club Silver Cup will also be offered at this show, open for competition to any member of the club in good standing, or those who will send one dollar for membership dues to Dr. Paul Kyle, Flushing, L. I., before the awards are placed; also Club ribbons will be given under club rules. Another Club Cup is that of the S. C. Buff Leghorn Club, awarded for the best display of a bona fide resident of New Jersey, and a member in good standing, or an exhibitor who will send one dollar membership dues to Geo. S. Barnes, Battle Creek, Mich., on or before Dec. 9, 1908. Ribbons for the best cock, hen, cockerel and pullet will be given to members of the club. Owing to the bright prospects of a large show, Mr. Wm. F. Fotterall of Oakford, Pa., the noted breeder of the Silver Penciled and Partridge Plymouth Rocks, will judge these varieties, and undoubtedly keen competition will be the result in these varieties. Send for premium list to O. H. Quentin, Secretary and Superintendent, Clifton, N. J.

Binghamton Association Incorporates.

The Binghamton Poultry Association recently incorporated under the laws of the State of New York with a capital stock of $1,000. The first show will be held the first full week in January, from the 5th to the 9th, inclusive. Competent judges have been engaged and the indications are that a most successful show will be held. The officers elected are President Harry Trafford, Vice-President Geo. L. Harding, Secretary Henry S. Martin, Treasurer Wm. Ely. Directors—Wm. H. Moody, Henry Trafford, Henry S. Martin, Wm. C. Bell, Charles P. Knight, J. Victor Schad, Geo. L. Harding, Rodney A. Knapp, Wm. R. Ely. Premium list will be ready for mailing November 15th. Address Henry S. Martin, Binghamton, N. Y.



Proof.

"Do you know that your chickens come over into my garden?"

"I thought they must be doing that."

"Why did you think so?"

"Because they never come back."

The American News Co. have charge of retailing the paper over the news stands throughout the United States.

Published by
LEONARD W. LOTT & CO., :: :: 30 CHURCH STREET, NEW YORK
Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

Greatly do I regret that my other business interests which have increased, compel me to give up an active part in the management of the AMERICAN FANCIER, and especially do I regret this when I think of the loyal support and co-operation from different fanciers, and of the many hours I have devoted in piloting the AMERICAN FANCIER to its present success and into a position from which even greater success may be attained.

Recently Mr. Frank W. DeLancey and myself, while traveling through New York State, were talking over poultry maters when it occurred to me that if the publishers of *Poultry Item*, of which Mr. DeLancey is Editor and Advertising Manager, could handle the AMERICAN FANCIER in connection with the Item it would make the strongest poultry publication combination that up to the present had been formulated.

I, like many others, have admired the wonderful success which Poultry Item has made, and after visiting their establishment at Sellersville and convincing myself of their ability to handle the AMERICAN FANCIER, I transferred in into their keeping.

The policy which is to be pursued is that which has characterized it from the first day that I became its owner, and it will be continued to be published as an independent paper and not for the interest and advancement of any special combination of poultry men.

The success of *Poultry Item* during the past year is of far greater magnitude than reached in the same length of time by any other poultry publication in this country, and when I recently visited them and studied over their plans, I plainly saw that their coming success would be even greater than that of the past, and therefore I feel confident in the future of THE AMERICAN FANCIER.

Although THE AMERICAN FANCIER has advanced so rapidly that it required more of my personal time than I could devote to its management, I will, as time permits, contribute my writings to this paper, and will not lose my identity or interest with its future.

At my out-of-town place, Fanwood, N. J., the poultry and pigeon fraternity will always find a welcome and many chickens and pigeons to praise or condemn. LEONARD W. LOTT.

ON the title page of this issue is a reproduction from an original painting made expressly for the American Fancier by Mr. M. Frank Cook. There was only a limited space of time in which to get out this painting, and the artist has done creditable work with the exception of the female figure and a few minor points.

Mr. Cook is a native of Rochester, N. Y., and a graduate of the public schools of that city. Early in life he learned a trade, from which he has since earned his livelihood.

From his earliest recollection his chief recreation has been the rearing of pigeons, and when only nine years of age one of the proudest moments of his life was when he had finished with his own hands, a small compartment in the barn, in which he introduced a pair of common blue pigeons.

Since that day all of his spare time has been devoted to the raising of fancy pigeons, and at present he has a stock embracing a great many different varieties, some of which are among the best specimens of their kinds in the country.

Mr. Cook has visited many well-known lofts of fancy pigeons in the country, from the Mississippi River to the Atlantic coast, and few fanciers in the country have a better knowledge of these gentle birds than he has evinced. His birds have won numerous prizes and he has supplied many high class birds to other fanciers in different sections of the country.

Mr. Cook is unquestionably the leading painter of pigeons in this country. His talent in this direction is wholly a natural gift, as he has never received any instructions in the art. From his boyhood days he was always drawing pictures of some kind or another, and by practising at odd times with pencil, crayon, pastel and oil colors, he has developed a genius that has found its fullest expression in picturing the birds he has always loved.

His masterpiece, if it may be so called, is a painting entitled "Pigeonville," which has been commended by hundreds of pigeon fanciers as the greatest painting of fancy pigeons in the world. The canvas is 5 x 7 feet in size, and shows almost every variety known to the pigeon fancy. As a companion picture Mr. Cook is now contemplating painting another picture to be entitled "Chickenville," to portray the leading varieties of domestic poultry.

Hagerstown Poultry Exhibition—A Show of National Fame.

Under the supervision of Mr. H. E. Baker and W. Frank Spahr, Hagerstown held the largest poultry show in their history, which covers many years of successful exhibitions.

There were 265 exhibitors entering a total of 5,000 of America's best birds, of which 1,500 were pigeons.

The judges were W. J. Stanton, G. O. Brown, Eugene Sites, Chas. McClave, L. P. Graham, J. H. Drevenstedt, W. G. Minnick, John C. Kriner, Harry R. Rudy and George Ewald.

The Wyandotte classes showed an exceptionally fine lot of high quality birds. The Whites were the best ever shown in Hagerstown and the competition was most keen. Columbians were represented by most of the prominent breeders and showed some exceptionally good specimens. Goldens showed a strong class, while the Silvers numbered only a few birds. The Buffs had a good entry, showing well in color, but not in feather. The Partridge had some exceptionally fine birds. Silver Penciled had a small class, while the Blacks were very strong.

The Single Comb Brown Leghorns showed a strong class as did the White Leghorns.

Barred Plymouth Rocks showed a great entry while the White Rocks were not many in number but great in quality. The Partridge and Penciled Rocks were the best ever shown in Hagerstown.

Hamburgs were poor numerically, but there was fine quality in the small "bunch."

Polish brought out a great entry of 300 birds, including some grand specimens.

The French and Dorkings were about the same as last year.

The Orpingtons were a strong class and exceptionally so in Buffs.

The Rhode Island Red classes had both quantity and quality in both Single and Rose Comb.

Brahmas, both light and dark, were very good.

Cochins fell short of last year's exhibit.

Langshans were well represented, and the Bantams were there in great numbers, showing high quality. Although the Game Bantams did not have quite as many as at previous shows, they had great quality, while the Ornamental Bantams were very numerous.

In Cochin Bantam alley there were some heated arguments. Sebrights were not many, but those shown were good. Rose Comb Blacks were the best ever shown in both number and quality. Japanese made a good entry.

The waterfowl exhibit was excellent. The pigeons were so numerous and the competition so close that it took over two days for the judges to place the awards.

The Hagerstown awards arrived too late for this issue, but they will be published in the next.

One of our advertisers has asked us to find for him a good single man as gardner and coachman who also understands poultry and pigeons. If a suitable single man cannot be found, an application from a man who is married but without children will be considered. Anyone writing to the office of THE AMERICAN FANCIER can obtain full information.

Car Wrecks an Egg Wagon, but It Was Too Early for Breakfast.

A gigantic omelette was cast on the New York streets last night at about 9 o'clock, far too early for breakfast. Benjamin Greenberg drove a wagon loaded with fifty crates of eggs away from the store of H. M. Fatt, his employer, at 2,442 Eighth Avenue, between 131st and 132d Streets, when a southbound car came racing down the avenue.

The car wedged the egg wagon between itself and an elevated pillar. Greenberg was thrown to the street, his left leg being broken by the fall. He was sent to the Harlem Hospital.

The wagon was knocked to pieces. The horse bucked and jumped until he set himself free, when he went racing down the avenue. The hundreds of eggs were demolished. The thick fluid strained down through the debris of the wagon. It formed a pond which got down into the car slot and rose flush with the car rails.

Thrifty housewives could only lean out of their high windows and bemoan the time of the accident.

* * *

Woonsocket, R. I.

The fourth annual exhibition of the Woonsocket Poultry Association will be held in Harris Hall, Woonsocket, R. I., December 10, 11, 12, 1908. Our judges are D. J. Lambert on Barred Rocks, Ducks, Geese, Turkeys; W. B. Atherton on White Rocks, R. I. Reds, Polish; Henry R. Ingalls on Buff Rocks, Wyandottes, Leghorns; W. H. Congdon on Game, Game and Ornamental Bantams. This may be changed or others added if necessary.

This, as usual, will be a comparison show, and we shall show the same liberality as last year in the matter of regular premiums, paying $2.50 first and $1.00 second, with an entry fee of 75c, four to fill a class. In addition to these premiums the Association will offer two gold specials on each of the leading varieties of poultry, which will be awarded without regard to the number of birds competing. Besides this several cups and cash specials have already been donated by members and others.

Our treasury is in excellent condition, we have an appropriation from the State of Rhode Island for paying premiums, and we shall be prepared to meet our obligations with the same promptness as in the past. E. W. Cook, Secretary, Forestdale, R. I.

* * *

Oconomowoc, Wisconsin.

The Oconomowoc Poultry and Pet Stock Association will hold their fourth annual exhibition December 9-14, 1908.

The Association, of which O. R. Eddy is secretary, has secured James A. Tucker of Concord, Mich., to judge poultry, and Herman Vanselow of South Milwaukee, Wis., to Judge pigeons. These judges need no introduction to poultry or pigeon fanciers, as their reputation for impartial scoring is well known.

The unqualified success of the 1907 show has spurred the management on to greater efforts to make the next show better than ever.

Homers at Boston.

We want to impress upon the minds of the Record Homer fanciers the interest that was taken in the exhibit of the Record birds at last Boston Show, especially by visitors, and which I know resulted in the addition of at least two new fanciers who will no doubt give an account of themselves later.

Boston was the first show to cater specially to Flyers and the first show that ever practically demonstrated a race for the uninitiated's benefit. This year if you will support us by sending your birds we will do more, by making up interesting classes, showing the paraphernalia used in racing in all its details.

We also would like to have another race, and again like to make a special exhibit of all birds who have flown extra long distances, made fast time or any performance that will interest the visitors and promote the sport.

All Record birds will be shown on the first floor, and we would like to make a special exhibit of birds, properly placarded. To do this before going to press will not some of you Flyers make some suggestions or offer to tell us where we can get special birds to make the Record end stronger and boom your hobby. It may be a little trouble, but you will more than be repaid in one evening at the show by seeing the public eagerly looking for information on this subject.

Get in line. Remember the Boston Show has done a great deal for the Homer men and is still going to keep doing a lot more, but you must help, too. A little later we shall have something of interest to offer on the other varieties along the same lines. Get busy. Let us hear from you all. E. P. Washburn, of Committee on Pigeons, Boston Show.

* * *

F. W. Grose will judge Pigeons at the coming Providence, R. I., Show.

* * *

T. B. McCauley will place the Pigeon awards at the Blue Island Show, Blue Island, Ills.

Allentown Pigeon Awards.

Rockaway **NEW JERSEY**

FEED
TEN CENTS PER BUSHEL

PATENT PENDING

Is your main feed for growing chicks and making eggs costing you more than 10 to 15 cents per bushel? Have you raised 95 per cent of all chicks hatched this season? Can you care for 2000 layers and raise 3000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how I do it. My new book, **"Profits in Poultry Keeping Solved,"** will tell you how to do it, as well as save you $25 on every 100 chicks you grow to maturity. My third edition of 5000 copies now ready. 3000 Single Comb White Leghorns and White Wyandotte chicks growing under my new system for the fall trade. :: :: :: ::

Are you going slow with your advertising appropriation on account of hard times?

FORGET IT!

For the Country was never more prosperous than it is today.

Some advertisers are reporting poor sales. Perhaps if they would advertise the right proposition they would receive more orders.

Poor returns from a good advertisement in a good medium is about as likely as a case of sunstroke at the North Pole.

If your proposition is right it simply can't help but bring returns if placed in a publication whose readers represent the quality kind.

FOR SALE—BUFF COCHIN BANTAMS—Chicks from Chicago and Hagerstown winners; write for information.

Mount Pleasant Poultry Farm

The Home of the Pure White Wyandotte and Single Comb White Leghorn

EADIE BROS., - - - Akron, New York

First prize pen of Black African Bantams at Madison Square Garden, owned by DeGraff Poultry Farm, Amsterdam, N. Y., from actual photographs. This breed is one of the most popular of the Bantam family, as they are quite prolific and the young easily raised as compared with others.

National Single Comb Buff Orpington Club

Will hold its fifth annual meeting in connection with the New York Poultry and Pigeon Association December 29, 1908-January 3, 1909, inclusive, at Madison Square Garden. The exact time and place of holding the meet will be announced later. The Eastern branch of the club will also hold its branch show at this same time and besides a fine collection of silver cups there will be a large amount of gold specials offered in the Single Comb Buff Orpington classes. The prestige secured through winning a prize at New York cannot be duplicated by any other show in America. Particulars with full list of the prizes that will be offered at this show on Single Comb Buff Orpingtons can be secured from the secretary, Will H. Schadt, Goshen, Ind.

Cardington, Ohio,

Will hold their show from Dec. 6th to 9th. D. J. Babson is secretary of the association.

Ohio Branch Medals.

The Gold and Silver medals offered by the American Poultry Association in Ohio Branch territory will be competed for at the Cincinnati show, January 12-16, 1909. These medals are as follows: One Grand Prize Gold Medal for the best cockerel in a group composed of the American, Mediterranean, English and Asiatic classes; a Silver Medal for the best cockerel of each variety in these four classes. The Gold Medal is open to competition only to A. P. A. members. All other medals are open to general competition. These medals are more desirable as premiums than silver cups and should attract large entries at the Cincinnati show. Send to the secretary of the Cincinnati association, Julius Friedeborn, 139 W. 6th street, Cincinnati, for premium list or other information. Chas. E. Cram, Carey, Ohio, Secretary Ohio Branch.

Milford Poultry Association

Have changed their dates and will hold their show from December 15th to 17th.

READING POULTRY AND PIGEON ASSOCIATION SHOW

December 8, 9, 10, 11, 12, 1908.

Liberal premiums, a large number of Trophy and Challenge Cups, good judges, a magnificent hall and first class express facilities. Entries close November 28th, 1908.

W. L. FULMER, Secretary, Douglassville, Pa.

Winter Treatment of Fancy and Exhibition Poultry.

Written Expressly for the American Fancier

IN a great measure the quality of the chicks you are going to raise next year depends upon the treatment you accord your fine fowls in the season just before us. To a great extent the number you are going to raise too depends upon the same thing. Seasoned poultrymen realize this and act accordingly and will have small need to read what follows; but perhaps as many as ninety-nine out of every hundred amateurs and small breeders do not.

And a large per cent. of these fall by the wayside or eventually quit because they do not give their breeders or their breeding stock proper winter treatment.

Put a pen of fine birds or a clutch hatched from a high-priced setting or two of eggs into most people's hands and what is about the first thing they will do as cold weather approaches?

They will build a nice, warm, cozy home! With a dear little yard attached! Isn't it a funny thing that the finer the birds are or

BLACK ORPINGTON HEN DUCHESS OF KENT

Winner of the $40 cup for best bird at Great Allentown Show. Owned and exhibited by Sunswick Poultry Farm, South Plainfield, N. J. J. Rufus Delafield, Owner; Geo. J. May, Manager.

they believe they are, the tighter they will build the home and the more carefully will they jail the birds?

A good many men long enough in the business to know better will do the same thing.

And I must score these men "long enough in the business to know better" too on one other point which goes a great way towards the improbability of any advance in the year following.

And that is: carrying a lot of worthless and cheap birds along into the fall and into the winter.

I don't understand why it is that such a large majority of poultrymen are so pig-headed or thick-headed as to do this very thing year after year.

I one time found in an over-crowded poultry farm that nothing but whole new corn was being fed. I knew that this party had put hundreds of dollars into good birds and that he had a variety for which such a feeding was exceedingly objectionable. To my surprised inquiry why nothing but whole corn was being fed he told me "to save expense." In other words, extra fine specimens were being ruined so that a lot of culls might be fed.

Even if they are eventually old, there is little or no profit in carrying a lot of cheap or low priced birds into the winter. And when this is done, when their room might be used by a few good birds to big advantage it is positively folly to do so.

Your choice birds should have plenty of room indoors and outdoors. For you can supply too much fresh air.

Just a cheap shelter with a good roof is the very best sort of winter home for fine birds. Little or no danger of your losing any birds by sickness in such a house.

And don't do a thing to urge or coax egg production. There is a way in which it is possible to keep a pen of hens in fine physical condition with alert, clear eyes all winter and get very few eggs from them. With pullets this is a little more difficult, especially in a mild winter, but it can be at least partly done.

At one time it was my practice to keep a few Brown Leghorn hens of priceless value in the service that no money could have bought or replaced them, scattered about in small colony houses made of half inch stuff and with cracks in the walls at that.

These colony houses in some winters were frequently all but buried with snow, and the hens, outside of a little straw to scratch in, got absolutely nothing all winter but hard grain, cold water and a little grit.

They did not lay much, that's a fact! but when Spring opened they did lay. They were then practically every-day layers. And how they would hustle over their range seeking the first tenler blades of grass, the early bug anl the belated bug of the year before.

The eggs hatched well—somewhere between 90 and 100 per cent. The chicks lived and grew apace. And they were, and here's what I was principally aiming at, as good as their parents, and better.

And as I trapnested every hen and knew the exact pedigree and parentage of every chick I could not help noticing that the bulk of the chicks as good as their dams were from the first clutches of eggs laid after the winter's rest.

Did these hens have their combs frosted? Yes, occasionally, in a spell of zero weather their combs would be nipped a little, but nothing to hurt.

Wintering fine breeding and show males is a little more difficult. I would not have them running with the hens outside of the breeding season, but if I had to confine them in small coops or on board floors I would run them with the hens by preference. It is often possible to have all the males running together. But if not, each male should have his own home and liberal pen, somewhat after the style of the hens. I prefer carrying the males in small groups though as against single yarding until along in January when they should be placed with the hens that are to be their breeding mates.

If Leghorn males have the medium comb they ought to have, and if they are as full of strong, warm blood as they should be, and if they have slept in wide-open, uncrowded houses all summer and fall, and have their water dishes properly set, they will stand a zero temperature in a summer colony house and not freeze their combs or wattles to amount to anything.

If I had any fears as to a particularly fine show bird or if I had a bird fresh back from a warm show room, I would grease the combs nightly, or anoint them with a glycerine mixture as a precaution against frostbite in spells of low temperature.

The American varieties I have had have done just as well under exactly the same treatment. In fact, for the four years in which I had Silver Plymouth Rocks not one was ever housed in anything but a wide open house winter and summer. Brother Corey was good enough to say in the Fancier these were the best grown and colored lot of Silvers he had ever seen.

Among several other strong points of advantage in this rational winter treatment of fancy fowls, whether for breeding or for exhibition, there is just one I wish to dwell on before closing. As exhibition birds likely to win, superb condition is often half the battle won. There is nothing like a life of cold, fresh air to put vigor and vim into your birds and lustre and color into their plumage; and if you wish to show such a hen in laying condition all you need do is to fetch her to a warm room and a generous meat and green food diet for a few days before the show. She is sure to respond.

The Production of Winter Eggs

By Rev. C. E. Petersen

FALL and winter eggs are the profit-bringers to every poultry keeper whether he keeps poultry on a large or a small scale and how to obtain as many eggs as possible and at a minimum cost is the important question which every one seems to have different ways of solving.

The trapnest will weed out the poor layers and the non-layers and give us a chance to retain only the producers and to give them the best care that circumstances will afford.

October, November, December and January are the months during which the highest prices obtain for eggs and it is easily understood that if a pullet is expected to fill the egg basket, or do her share to fill it, at this time of the year she must, out of a necessity, have been hatched in time and given proper care during the growing period of her life.

More than this, only the most vigorous birds should be retained and the best eaters and strongest growers for the bird with a delicate constitution and delicate appetite will never be a paying proposition if the eggs she is to lay are to pay the expenses for there will be few, if none, and days will intervene between the laying of an egg.

Much as could be said about overfeeding much more might be said about under-feeding and improper feeding, for our experience has always been that the hen with the best appetite is the best layer, and that before the laying season begins she will need increased food supplies, and when she is in a good condition of flesh she will start laying.

It is almost impossible to overfeed a strong and robust hen and a good layer, and she will not do her best except when she gets a bountiful supply of food and all that she wants, not what we think she needs, for following the feeding formulas of this one and the other, has often proven a source of disappointment in obtaining winter eggs.

It is true, however, that among hens, same as among cattle, there are some that will turn their food into flesh and flesh only, such should be discarded and sent to the market. But the layer will lay, and make it her business, and she cannot do business without capital, and her capital to work with is proper shelter, proper food, and all of it she needs to furnish strength for her own system and material to manufacture eggs out of.

The dry food system has never appealed to me very much, and though it is well to keep a hopper full of grain, where the growing stock can get at it, it is simply a means of inducing laziness to keep food before a flock of laying hens from morning until night until they are sick and tired of the sight of it.

We had heard a great deal of not over-eating if dry mash was kept before them all the time, and that's correct, for if they can get any thing else they will stand on their heads in a foot of straw before they will eat it, and they only resort to it when there is nothing else to get. They get tired of the sameness, and variety, if not the spice of life in a hen's life, it is the essential thing in increased egg production.

Many years ago, and up to a recent date, the poultry journals were full of warnings about giving the chicks little at a time and often, now the bill of fare has changed into stuff them with all they can eat, from moning till night keep it before them, and many testimonials could be gathered together on the unadvisability of this method as indigestion and other ailments, consequent on improper feeding has been the dire results of these instructions.

And the same story holds true about the laying stock, give them all they want as long as they are shelling out the eggs, but give it to them in a proper manner, let them work for it, and keep them busy, have a stable ration of which the foundation should be the common grains, easy of access, such as corn, wheat and, oats, and into this put a change of some other grains, such as barley, buckwheat, millet, kaffir corn, in fact anything that will afford an inducement to scratch, and a healthy hen will scratch as readily as a boy will keep his feet going, and not much inducement is needed.

Damp, close and stuffy houses, where the straw on the floors have lost its sound, by being damp, will not help out winter egg production, Knock a window out, if necessary, or take the whole of it out and put in some muslin in its place, but keep the straw or other scratching material crackling dry so it will rattle under your feet when you get into the houses—hens love to scratch in such material.

And as to the much abused, and much slandered morning mash, I have a few things to say, I, for one, am old-fashioned enough to stick to it, costs a little more trouble I know. A hot mash cannot be fed the night before that the hens may have it while their owners lie in bed in the morning, nor can a supply be given of it once a week and let it go at that, it has got to be mixed in the morning, and does cost some time and some trouble, but much argumentation would be necessary to convince me now, after years of use, that it is not conductive of an extra large egg yield, I have been fool enough to try some of the new fangled ideas as to feeding, and the fool is still sticking in my crop, a man is getting old, I guess, when he don't know enough to let well enough alone.

Keep the hoppers full, gentlemen, and you will have the egg basket empty, the hen will balance her own ration, you say, try it and see what she will do; she don't read the poultry journals and so is not up to date regarding the new methods, she will first eat all the corn in sight, when that is gone, the wheat, and the rest will follow suit, if she is hungry enough to want it.

Again, I say, that all she wants she ought to have, if she is a layer, but she should have it in such a way that she can work it out under her feet, and as for the morning mash, if properly measured out, it will never make her stand around, when she does she would stand around anyhow. I have seen hens so useless that they would stand loafing in a bright, sharp, sunny, winter morning without ambition enough to work. It is the breed and constitution and not the mash that does it. A hot mash on a cold winter morning is an inducement to go to work for a well conditioned hen, as much as a hot breakfast is to a well conditioned man.

We have already hinted at the matter of early hatching for early eggs, and it is an imperative necessity to have the American breeds hatched in March and April, and not a day later, if eggs are wanted in October and from that out through the winter months. I don't believe in forcing the stock for eggs so that they will begin to lay at four months old as this is detrimental to size, and when a person is breeding Plymouth Rocks let us say, and the the chicks are hatched in March, they will be up to size in September and at the end of that month and early in October the eggs will come to hand, which is much better than to force for eggs earlier on the expense of proper size, which we must have. Late hatched chickens, whatever the interested parties may say to the contrary, may answer in some climates where the growth is not stopped at any time during the year, but where frost turns the leaves into gold in October and where snow begins to fall by Thanksgiving they are simply a snare and a delusion and where egg production is a desideratum a loss.

It is a curse to the poultry business of America that the hatching of late chickens is encouraged by breeders who only have their own interests at heart; eggs are bought late in the season for half price, they are hatched at a time when the young cockerels should begin to practice voice culture, and they are dragged through the hottest part of the summer to come out a miserly little lot in the fall, worthless, from a practical poultry mans standpoint, and the following spring used probebly for breeding, filling the country with so-called pure breeds that have little in common with the real progenitors of the breed which were properly hatched and raised.

A crusade against late chicks, inaugurated by the poultry press, would be of immense practical benefit to the poultry interests of the country.

The foregoing have all been stated in connection with the obtaining of winter eggs and where fancy poultry are to be kept up to their proper breeding value an entirely different program is necessary as in this case only a normal production of eggs should be encouraged, and nothing but dry grain fed, and every care taken to keep the birds in a true state of productiveness, which means a spare body with good hard flesh and muscle, and this means strong active chicks and very few dead ones in the shell.

Bantam Briefs.

By this time (Nov. 15th) in most sections of the Eastern and Middle States the "little fellows" are in winter quarters. In some quarters the birds may be allowed to run out during the middle of the day, particularly sunny days, but they should not be allowed to roost outside in trees, bushes or open coops, as a cold contracted now will in most cases last all winter, that is, if the bird contracting the cold lasts all winter, which it seldom does. When the weather is severe, cold, high winds, or raining, keep the birds inside, but see to it there is a plenty of fresh air let in the house, no direct draughts, no over-head ventilators, far better, open the door, say two inches, or raise a window on opposite side from where the wind blows from. Keep the house perfectly dry, not excepting where the water fountain stands. Better take the time to take the fountain or vessel in which water is kept outside the house to fill it, than to spill only a little on the floor inside the house. If, like some of us are forced to do, the surplus cockerels or the bulk of them, must be housed together, let it be in a house where they can see none of the females; better still, where they cannot hear them cackle, or hear their happy songs, and put an old male with each lot. There will be less fighting and less of other objectionable pranks. The cockerel house should have less litter on the floor, as they are always more or less quarrelsome and the weaker ones may suffer as the stronger will not leave them in peace to scratch among the litter for their food. We do not approve of any mash or soft food for Bantams, unless, perhaps, an occasional one on a severe cold morning. The males will get too fat, and the females commence to lay too early, if forced by warm, soft food daily, and we think the birds fed warm, soft foods daily are more subject to colds. In severe cold weather we slightly warm the drinking water, also the grain before feeding. Feed a variety of small grains, always scattering it among the straw or leaves on the floors and make them work for it, unless, perhaps, in the cockerel house, it may partly be fed in troughs, where birds are inclined to be very quarrelsome. We like forest leaves and pine needles very much for littering the floors, yet hay seeds and chaff are very good, but litter for Bantams should be something short or fine, instead of long hay or straw. Never use sawdust on floors or in coops, or fine shavings.

The above is some of our methods. We have no trouble in wintering our birds where they are confined from November until April. Our only trouble is in having our females lay too many eggs before it is time to begin hatching them, as May is as early as we care to have Bantam chicks hatched. And we credit our success to fresh outside air daily, no dampness in our houses from any source, dry foods, plenty of exercise, a warm place to roost, some green food, not too much, shells, grit and pure water always.

T. B. Zimmer.

Important to Pet Stock Breeders.

The American Fancier, ever since its foundation, has been a fanciers' paper in every sense of the word, and as such it will be maintained, and the breeders of pet stock are nearly all fanciers in every sense that this word implies, and in the past the columns of the American Fancier have been devoted to poultry pigeons and pet stock, and it is our intention to give the pet stock world the best that the country affords, and we know it will be pleasing to our large clientele of pet stock patrons to learn that satisfactory arrangements have been made with L. G. Plath, York, Pa., to edit this department. Mr. Plath needs no introduction to the pet stock world, and he has done as much for this fancy as any man in the country. He is considered America's foremost judge and best authority, and is president of the American Fur Fanciers' Association, which he has been identified with since its organization. Mr. Plath will be assisted by able writers in making this the most interesting pet stock department of any magazine published. Mr. Plath makes his initial bow with this issue. We ask the support of all our Pet Stock friends.

A Conversation

"Do you keep fowls?"

"No, bothersome things. Fresh eggs are very nice of course, but fowls don't pay. I can buy what we want cheaper."

"How so?"

Well, I can purchase them for 2 to 3 cents, and I hardly think I can produce them at that."

"Why so."

"Oh, the cost of this and that, the loss by disease, and other causes."

"Well, do you know what is the cost of keeping a hen?"

"I have certainly heard, but I am not sure."

"The cost of keeping a hen is, when all the food is bought, about three cents per week. That makes 6-6d per annum. She will, if hatched in early spring, not too soon nor too late, lay all the winter when eggs are 2d each. If she prove a moderate layer of 120 eggs, and these will average quite, if not more than a penny each, you have 10% return"

"I see, I see, a profit of 3-6 pe hen."

"Yes, yes. But there are two other considerations. A hen deposits about 80 pounds of manure, which, being strong, must be mixed with its own weight of soil, or 160 pounds in all. Is that of no value to your garden or field?"

"Certainly."

"Then have you no household scraps, bread, boiled vegetables, milk, fat and the like?"

"Certainly, more than I like."

"So that your food bill is, with care, considerably reduced."

"I see, I see."

"Yes, therefore, with the manure and the reduction of cost, your profit may be anywhere, per hen, from 5% to 10%. A farmer of my acquaintance, who grew an abundance of vegetables and had some waste corn, always put it at 10% per hen. This was the father of the celebrated poultry specialists, Abbot Bros., of Thuxton, Norfolk, England. This surely is satisfactory."

"Oh, yes, yes, to be sure! I never saw it in that light before."

I am glad of that, but here again, you have heard of pure bred poultry—prize poultry. They cost no more to keep than common mongrels. They lay, (some of the breeds), many more eggs. Every bird has a special value, because it is pure bred. And if capital has been sunk in the business,

after good experience has been gained in management, mating and showing, it is possible that odd birds may be sold at the price of from one to half a dozen heifers or so, and its cost of up-keep was only as shown 6-6 per annum."

"Really, you astonish me."

"Well, it is so. Yet you say fowl keeping does not pay."

"Of course I can see it will pay that way. But that way never occurred to me till you told me."

"No, I dare say not. There are many things that don't occur to us, because we do not give them sufficient thought. It all depends, in most things, at what angle of view we look at them from. One man's meat is another man's poison. One man swims, whilst another sinks. One man makes a fortune whilst another one is looking for it.

REMEDIES

Scaley leg. Brush hard with soft-soap and soda every day. Keep the legs in raw paraffin. At night apply carbolised vaselin., or flowers of sulphur and lard.

Vertigo. Open the vein on the underside of the wing, and take out from 10 drops (bantam) to 20 or 25 (large fowl) of blood. Place the finger on the wound till flow is staunched.

Roup. Bathe swollen face with hot water and vinegar, and give in the soft food, twice a day, a solution made thus: To one tablespoonful of solution put 10 parts of water. The solution is made by putting an ounce of sulphate of copper into a gallon of water. One tablespoonful of the solution diluted with 10 tablespoonfuls of water, will do for about 20 fowls. Kept out of cold and raw winds the birds will soon recover.

Diphtheritic roup. Ditto, and burn the white and yellow places off in the mouth, or the warts outside, by touching with strong solution of sulphate of copper and vinegar, or diluted acetic acid.

Crop bound. Requires an operation.

Diarrhoea. Chalk and rice with 2 or 3 drops of laudanum, or chlorodyne.

Liver disease. Liver pills daily, and oatmeal porridge and milk.

White comb. Flowers of sulphur and lard.

Egg bound. Place the bird up to the thighs in hot water. Oil the vent with a feather. Also give a teaspoonful of olive oil. Assist the bird when she makes an effort to lay by getting the finger well behind the egg and pushing horizontally.

The greatest difficulty, to a beginner, will be a soft-shelled egg. All the pushing only makes the egg larger for the orifice. Prick the end and let the contents run out. As the egg reduces in size the bird will strive to lay, which generally brings some of the thick skin of the egg within reach of the fingers, when all may be withdrawn. In very bad cases of a shelled egg, it has been recommended to break up the egg. Put the finger into the orifice, well oil and extract the pieces of shell bit by bit, and thoroughly wash out with permanganate of potash and warm water. But having relieved scores and scores of egg bound hens, I never had to resort to this dangerous plan. If any particle of the egg remains in, suppuration will take place, and the bird die a lingering death.

Bantams are most liable. Never despair if you can see the egg at all. Do not hurry matters. Sometimes relief may be given in a quarter of a minute, often in a quarter of an hour, and sometimes I have had the bird quite half an hour in and out of the hot water.

All other writers I have seen say steam the vent. In my opinion it is utterly useless. Get the bird almost bodily into hot water.

Frank Gayler, formerly of Gedney Farm, is now poultryman for Stump, Walter & Co., 50 Barclay St., New York City.

The FANCIER will keep you posted on the leading shows.

The Dutch Rabbit.

The Dutch Rabbit originates from Holland. They are bred a long time already. Forty years ago, when a boy in Germany I bred the Dutch Rabbit. They were then about as large as our Belgian Hares are now; they were not as good marked then as we have them today; it was interesting to breed them then, and it is still more interesting to breed them now, as we have not bred them quite up to perfection, but have bred some very fine specimens. There is one advantage they have over the rest of the rabbit family, that is, almost as soon as born the good marked ones can be picked out, and the breeder does not have to be afraid of destroying the best ones, if he wishes to destroy any of the young, as sometimes a doe has more young than the breeder wishes to have her raise, They are excellent mothers, and are used quite often as foster mothers. They are a hardy and active rabbit; they thrive and grow well in small hutches, and require no more feed and attention than the Belgian Hare.

The Dutch Rabbit is to weigh five pound or less, to be a cobby little rabbit with small, erect ears, and eyes to be the same color as the body; the body color can be of any solid color, free from white hairs. They are bred in black, blue, gray, yellow and sutty fawn, the blaze of face to be tapering, wedge, rounded from smellers to and including ears, a fine white line to extend between the ears; the color to be a continuation of the white of face including neck ending in a clean-cut level line around the body close to the forelegs. The front half of the hind feet are to be white, and level across and to match each other.

Cavy Breeders Prepare for Winter.

The cavy breeders are preparing to house their pigs for winter. They are selling o the surplus stock only to keep the breeders over winter. Now in preparing to house the cavy for winter do not make the coop so tight that the fresh air cannot get in, nor the foul air to get out. Make the coop warm, but make it so there will be ventilation that plenty of fresh air can get in, and also plenty of sunshine. Quite a number of breeders ask me in January why their cavies get sick, poor and die. When I ask them about their place or go to see their caviary, I find cavy shut up in a dark box in an out house, where no fresh air or sunshine can get to cavy. Then they say, I feed them good; they have feed in their box all the time, and I think it so strange that they get so thin and die. They forget that if they were to take cavy's place and live there one week, much less a month, they would be sick and almost dead for fresh air and a little sunshine. Fresh air and sunshine is the greatest panacea that can be given cavy. While cavy is the hardiest and healthiest animal I know of if kept properly, but if kept in unsanitary conditions will get weak and sickly.

The cavy can be made very tame and makes a very nice pet for the boy or girl and also for the grown folks. If you was thinking of getting your children a live toy to keep them off the street, and something to interest them, then get them some cavies, as they require very little attention, and the children will learn to love animals by breeding them in next issue I will tell how to house, feed and care for cavy.

Just Off the Wire.

F. W. Corry, Ossining, N. Y., will judge White Wyandottes at Boston.

Attention, Orpington Breeders.

Owing to the special clubs, i. e., the National Single Comb Buff Orpington Club, the Single Comb Black Orpington Club, and finally the Single Comb White Orpington Club, the membership has considerably decreased. It is a fact, however, that through the efforts and expenses of the American Orpington Club, three species of the ten Orpingtons have been so far admitted to the Standard. It is thus evident that the American Orpington Club has fulfilled its duty, namely by making public and popular the merits of the Orpington fowl and subsequently its admittance to the A. P. A.

At the last meeting which took place at the Madison Square Garden on Dec. 18, 1907, the members decided to offer silver cups to any show in Canada or in the United States, providing, however, that three club members are exhibiting, and special prize ribbons only, if two members of the American Orpington Club participate.

The new catalogue contains a brief history of the origin of the different breeds of the Orpingtons which is worth while reading. I will mail a copy for the price of 25c.

Apropos, I wish to call your attention to a special meeting of the American Oprington Club which will be held at the Buffalo Poultry, Pigeon and Pet Stock Association, on Tuesday afternoon, February 2d. At a special meeting of the executive committee of the American Orpington Club it was decided that Dr. Paul Kyle will judge the Orpingtons at the Buffalo Show. The American Orpington Club expects that many exhibitors will take advantage of the liberal offers at the show; a silver cup for best Buff; a silver cup for best Black; a silver cup for best White; a silver cup for best Jubilee, and a silver cup for best Spangled Orpington fowl, besides special prize ribbons.

Application blanks for membership of the American Orpington Club will be mailed by applying to Dr. Paul Kyle, secretary of the American Orpington Club, Flushing, L. I.

A Sad Death.

Mrs. Emma Hoyt, wife of W. A. Hoyt, died at her home in Whitewater, Wisconsin, Saturday, Oct. 4, 1908. Mr. Hoyt is well known to many of the readers of this journal, having shown his birds in Oklahoma the past two years and was in Oklahoma City attending the State fair when called home. The funeral was held from their residence in Whitewater, Tuesday, Oct. 6th, at 2 o'clock. Mr. and Mrs. Hoyt were married Nov. 30, 1887. Mrs. Hoyt was a loving wife and mother, and is survived by her husband and two small children, a little son and a daughter.

"Knowing as we do that fowls must have some green food in winter if they are expected to lay, we have come to depend upon mangels for green vegetable food. They are easily raised, keep perfectly until late in the spring, do not affect the health of the household if stored in the cellar and are liked by the hens. If you have never used them you will be surprised how profitable they are to feed to your hens. They should be sown in rich soil during the spring. Cultivate them well and put them away before they are touched by frost. Feed them whole and raw. You will be pleased with the results. We have from time to time advised our readers to put in a crop of mangels for the winter layers, and those who have a supply this year will make the winter keeping of hens profitable."

The Wilkes-Barre, Pa., Poultry and Pet Stock Association

Will hold their second annual poultry show at Pulaski, Tenn., November 26th to 28th, 1908. Write to Lewis Culps, Secretary and Treasurer, Pulaski, Tenn., for catalogue and entry blanks.

The National Pigmy Pouter Club

The inevitable has arrived and it is with much pleasure that I note the organization of the new Pigmy Pouter Club. With great pleasure I have read the articles by the president and the secretary. With hearty appreciation I learn of my election as vice-president.

Not being so modest as our honored president and secretary, I am much pleased with my office and thank my friends sincerely. I shall endeavor to do my part by the club as all members should and in addition put in a few extra licks as becomes an officer.

Heretofore a vice-president, and I might say a president, too, has been merely an honorary officer; in other words, a figurehead. This is not by intent or design of the clubs, but by reason of the invariable practice of these officers through disinterestedness, inability or some other reason to let their positions become of slight importance, leaving the entire burden, both executive and administrative, as well as the entire responsibility, to the secretary.

This state of affairs, I am glad to say, henceforth shall not exist. Our president has taken the first step of the new regime by his excellent article, recalling the duty of every member to his club and giving other good and wholesome advice which, I am sure will be productive of the best results. Following President Jenkins and heeding his admonition I shall do my part as a member and shall endeavor to make my office one of usefulness and activity as well as of honor.

It is most gratifying to note the magnificent start of the National Pigmy Pouter Club. Seventeen original members! A number far in excess of that at the advent of any specialty club in this country. All this goes to show what a void there has been in creating and fostering interest in the most charming variety of all fancy and scientifically bred pigeons—the Pigmy Pouter. It also is evidence of the near-sighted policy of the old club and the selfishness of some of its members who sacrificed the good of the club and the Pigmy itself to their own greed by continually, through bulldozing, hoodwinking and other questionable tactics contrived to have the annual meets held in the East. In some instances after a sufficient number —themselves included—were pledged to support a movement for a Western meet the following year.

This auspicious beginning of a new club is a beautiful and munificent tribute to the popularity of our fancy, showing that it arises above and will not be kept on the level with the breeders (not fanciers) who would sacrifice it to their own unscrupulous designs.

Secretary Reimer has done yoeman duty and to him belongs the credit of the grand beginning and encouraging outlook. He has many new and good ideas up his sleeve and all that is necessary is a practical and air-tight set of by-laws and a constitution that says something and means what it says.

This will be accomplished by having several drawn up by the members, one by each, if possible, and the best and most practical features of each adopted. With this foundation and practical and business-like management a thriving club must be the result. The name of the club—National—bars all sectionalism and undoubtedly be a law that meets must be held alternately in the East and West. Thus obviating one of the most harmful dissensions of the old club. Others will be eliminated also and it is elected that a set of rules will be presented that will at once gain the esteem of all desirable fanciers, the great majority of the American Pigmy Pouter Club and their friends.

They are invited to cast their lot with us now and have a say in the rules or if they are sceptical, a bit shy or nervous, then join when the constitution is adopted. A personal invitation will be extended shortly, but don't wait—get aboard.

E. C. DUFFY.

An Unique Duck

By Theo. F. Jager

NO matter in what particular direction our sense of beauty may have been led or what our ideas of what constitutes rarity in bird-life (whether plumage, queer shape or action) may conform to, we all will have to admit, and there is no exception to this—that the Common Sheldrake, often simply called Sheldrakes, the connecting link from duck to goose, beats all the spoon bills, frizzled geese and odds and ends of the aquatic lines for striking shape, unique bill, sharply defined intense colors and actions.

Common Sheldrakes are not common in this country. Spiting the fact, that they are perfectly hardy in any climate, free breeders, strikingly beautiful and peaceable to other varieties with which they may be confined to yard or pond, they have not taken hold on the public as in England, Germany and France. The few fanciers in Connecticut and Eastern New York who have them in their collections of fancy water fowl and the few zoological gardens that have a pair of them cannot be called to form two per cent. of the people that should have them. How different is it over in central Europe. It is there the exception and not the rule as here, to find a collection that does not contain two or more pairs for breeding purposes. Yes, I have seen ponds covering acres that were literally a mass of white, black and red, the colors so prominent on this duck.

Sheldrakes belong to the class of ducks that build their nests in cavities. They love the deserted holes of fox and badger, if these are within easy reach of their preferred water. Districts that hold plenty of burrowing rabbits, near a seashore, abound generally in excellent nesting opportunities for our duck. If they cannot find a suitable place in the ground or if the rocks, that often form the breakers on a beach, do not have crevices that may be made into a good shelter for the nest, the ducks will as a final resort hunt up a hollow tree or remodel an old crow's nest, if not too high up, in a secluded tree.

Bodinus, of Germany claims that the common Sheldrake is the only member of our feathered bipeds that can inhabit the same hole with a fox; and hunters in going after the fox and his litter, by digging them out, have on more than one occasion found the nest of a Sheldrake in a sidebranch. The only way to explain this peculiar phenomen is in the extraordinary fighting capacity of the parents after the eggs are laid or the youngsters out. They are a perfect fury when their own seem to be in danger. We with our later day doubts about everything out of the common may very likely classify Bodinus and others having similar opinions to the Nature fakir's spiting the many tales of trustworthy foresters that have found ducks and fox is one hole. Out of my personal observations in the sandhills bordering on the German ocean I can state, that I have found this variety partial to rabbit burrows. The subterranean passages extend often many feet along the edge of high water mark and the sitting duck has not far to hunt for food, as the receding tide leaves every six hours an excellent selection of fish and worm-food in the shallow washouts of the waterbed proper. The nest is generally built out of dried seeweed, grasses and lined with a heavy coat of excellent quality down. The duck lays from 6 to 9 eggs to a sitting. The eggs are perfectly formed and white shelled. Some nests have been found that contained as many as 13 eggs, but this is an exception. If all eggs are removed, the duck will again lay a cluster, and if these are removed again and again, records are on hand to show that as many as 38 eggs have been laid in one season by one female. The eggs produce youngsters after 26 days of incubation, and the duck sitting will, while eggs are hatching, remain fearlessly on the nest and can be easily caught.

On Sylt, the favorite German summer resort, an island in the German Ocean, artificial hatcheries are built. Small channels are made to connect with a nesting place formed by lifting out a sod and filling the cavity thus made partially with moss and nesting material; after which the sod is again placed to cover the same, being properly supported all around on the edges.

The duck in searching for a nesting hole is partial to these well fitted up abiding places, not knowing that she allows men an easy access to herself and eggs. In covering up the exit hole to prevent the departure of the sitting or laying duck, she can be caught without any trouble As a rule all the eggs excepting five are taken from the nest, and used at home or sold and if it is not the desire to take the sitter, the stopping of the exit will force her back on the eggs in a short while, when it is reopened again and the duck will keep on hatching as if nothing had happened.

The main ration of the duck consists of the tender greens of the salty ocean, to which she adds grains, bugs and worms from the main land, but as she is also well able to exist on a more domestically used, poultry ration, nothing prevents her from being kept successfully in any yard or on any estate. It is advisable, however, to pinion the birds hatched from eggs laid by wild ancestors as the inner longing and partiality to salty waters may lead them to take wing when "the call of the wild" comes to them in the fall. Birds removed three and four generations from the wild are generally perfectly contented with their rather narrow existence in sweet home waters.

Larger parks, that have various waterways allowing the birds to fly from one to another, need not fear that the once domesticated birds will ever get the longing southward in fall, especially if liberal grains are provided and hollow trees placed in secluded spots along the water's edge to allow the birds shelter from our northern winds, in winter, and secure nesting places in spring.

The Common Sheldrake (a male two seasons old) measures in length 22 inches (extended) of which the tail takes five and bill one and three-quarters. From tip to tip of wings flying it is 36 inches. The duck is a trifle smaller. Drake and duck are marked about the same, the colors of the latter being only less bright and prominent. The head and upper neck is jet black, having a green sheen, sometimes shading into steel. Lower neck and breast are pure white, we might call it a broad band lined with rostbrown. Wing coverts, back, sides and tail coverts are pure white. Lower breast and body white with a light gray shading, nicely set off by the broad red brown band encircling the breast and which joins on top where neck and back meet. The tips of the long tail feathers are black. Wings have a green purple barring. The oddly shaped bill is carmin red, broad on its tip and has in its upper line the shape of a crescent forming a fleshy red knob on its base. This knob is a sexual characteristic of the male and is seen on ducks only during the mating period, but never attains in them the size and prominence as in the male.

Sheldrakes are natives of Europe, Asia and Africa. We find her in large number in the north of Europe along the coast of the German Ocean and the Baltic Sea, where they breed freely. French reports from Morrocco state, that in the winter, they make a rich picture while inhabitating the waterways of northern Africa.

While Sheldrakes are not a large variety and have not a specially toothsome meat, it being as a rule in old birds that have lived near salt waters rather fishy, yet, on the other hand, the meat of young birds is very tender and of good taste, especially if fed on good grain rations in confinement. The main source of income from the wild birds is had in the eggs, as they will lay at times as many as 35 eggs, if all the previous lays that have been taken away and secondly in the excellent and clean down, with which they line their nests. This is considered fully the equal of that from Eider duck, and being cleaner, preferred by many. But all in all, their main claim to our care lies in their beauty, their queer goosey shape and the fact that they are the missing links uniting geese and ducks. The long legs, long pointed wings, length and shape of tail and their mode of living makes us classify them with geese, while the bill in its entire makeup, excepting only the knob, favors their classification with ducks.

The American Fancier and the Bantam Industry.

F. W. DeLancey.

A number of years ago Bantams were very scarce and the quality poor in comparison with the quality of the standard breeds. And when we visit one of our large shows today and see as high as twelve hundred Bantams on exhibition, surely it is a sight pleasing to the visitor and the fancier, and the fancier who attended the shows ten or twelve years ago can see what a marvelous work has been done in perfecting in miniature the standard breeds and bringing them to state of perfection equal and in some varieties superior to the standard breed. But few, the fancier not excepted, realize the time, patience and skill required to produce them and bring them to the down-to-date quality we find. A hundred years to bring the Sebrights to their present state of perfection, is only one of the many instances of time and patience. Ten or fifteen years ago Bantam breeders were few and far between, and only a few were seen at even the large shows. Now what do we see at such shows as Madison Square, Boston, Philadelphia, Allentown, Hagerstown and other large shows, east, west, north and south? Why, 1,000 entries is now a common thing, and a more enthusiastic set of fanciers cannot be found, and it is their delight in showing the product of their science and skill, and today entire plants and farms are devoted to their development, and to every dollar that was invested in them ten years ago we find a thousand dollars today, with an ever increasing demand and at profitable prices. And the question is, What are they good for? And what makes the demand? Now, we admit they are not much for size, yet the residents of the large cities find them a source of revenue, as well as pleasure. The average city lot 15x20 or a little better does not afford an opportunity to raise the larger breeds where room is needed. But Bantams thrive and do well in small enclosures, and in some instances when there is no room on the surface for more than one variety we see them building what is called double deckers, asd we see two and three varieties kept is this way. The business done in Bantams represents thousands of dollars annually and really good specimens command high prices, and a hundred dollars per pair is a common occurrence; a hundred dollars for a bantam is not a rare thing nowadays. And many predict that the business is still in its infancy. New varieties are being produced, and it will be only a short time until all the standard breeds will be reproduced in miniature, and the American Fancier has done much to bring the Bantam business to the front, as a glance over its columns during the past years will convince you, and it is our aim and intention to make the American Fancier the leading Bantam organ of the country, and to accomplish this end we will leave nothing undone on our part to accomplish the desired result, but we wish to state that little can be accomplished without some substantial support and the co-operation of the fanciers and breeders of Bantams. We want you to contribute to our columns. Do not wait for us to write you a personal letter, send in your contribution and send us the news of the Bantam world, and we assure you we will leave nothing undone to make the Bantam department of the old, but new, American Fancier the best Bantam medium in the country. Now let us hear from every Bantam fancier.

Game Bantams and the Raising of Them.

So much has been said about raising Game Bantams and so differently that I will try and give my eight years' experience with them. To successfully raise them they must be kept in runs. Any one can hatch a few hundred chicks and raise about one-half, but I do not think that a success. First of all select good, strong breeding Bantams that are in good condition to gather the eggs from. Have the eggs hatched by Nature's incubator, a Cochin Bantam hen if possible. When the chicks are hatched put them into brood coop, floor covered with hay blossoms, with a fair sized outside run, enclosed so chicks are always where you want them at feeding time.

When I have newly hatched chicks I generally feed five times a day and as soon as possible I put them on grain feed and make them scratch for everything they get. I claim the more you make them scratch the more their muscles develop and the longer the legs get on a Game Bantam which is certainly the main

Black Breasted Red Game Bantams, owned and bred by D. G. Whitmyer, Lititz, Pa.

point in a Game Bantam. If you have not got reach you are beat at once.

I have housed Bantams the day they were hatched in coops 4x5 feet outside runs 4x10 feet; have raised every chick and not a scrmet in the bunch with plenty of station to them.

I particularly remember one clutch of chicks. I had given the mother thirteen eggs; hatched nine chicks and I raised all of them; succeedir in raising four pairs of Bantams and one extra cockerel that was not perfectly colored. I succeeded in selling nine chicks to a well-known fancier for $82.50. This, of course, cannot be done every time, but it goes to show us that is the proper way to raise them or they would not have brought the price they did.

A year ago I hatched 228 Game Bantams and raised 201. This year I hatched a few more but a neighbor's cat got away with quite a few and I only raised 200 on a patch of ground 50 feet wide by 150 long.

Game Bantams can stand any amount of cold if kept dry and active. Never have the brood coop bare; have hay blossoms or chaff on the floor for them to work and you will find them to thrive fine.

D. G. Witmyer.

The Montclair Poultry Association which was formed last year and comprises some of the well known poultry men of Montclair and vicinity has decided to give a poultry, pigeon, pet stock and dog show on January 28, 29, 30, 1909. Already enough entries have been received to ensure success. The awards comprise cups high cash premiums and ribbons and specials. Good judges are assured, and premium list are in the printer's hands. All correspondence should be addressed, Montclair Poultry Show, Montclair, N. J., Bert C. Miller.

The American News Co. have charge of retailing the paper over the news stands throughout the United States.

Published by
LEONARD W. LOTT & CO., :: :: 30 CHURCH STREET, NEW YORK
Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

IMPORTANT ANNOUNCEMENT.

American Fancier Under New Management.

The old saying that time makes many changes is very true indeed, and especially is this true in the case of the AMERICAN FANCIER. This change was quite a surprise to the fancy, and in fact a surprise to the new management and to Mr. Lott, the former publisher. The rapid growth of the AMERICAN FANCIER had made under the able management of Leonard W. Lott & Co. made it imperative that he give more of his time to the business. This Mr. Lott could not do on account of his other business interests; and rather than sacrifice the growing interests he decided to place it in the hands of those who he thought were in a position to make it the largest possible success. After visiting the *Poultry Item's* modern and down-to-date plant, and seeing their able office force and knowing the calibre of their traveling representatives, he came to the conclusion that the AMERICAN FANCIER would be safe under their management and ownership, and that the owners of the *Poultry Item* were in a position to make America's foremost fanciers' paper a larger success, unless he gave it his undivided time and attention, which he was unable to do. The AMERICAN FANCIER has found a good home, and will continue along the same lines as heretofore, namely, a fanciers' paper and a semi-monthly. We will maintain a New York office and the paper will go on along exactly the same lines as heretofore, excepting that the editorial office will be Sellersville, Pa., to which point all communications should be addressed. We trust that the same loyal support may be given us as was given Mr. Lott, and we will endeavor to give you the same prompt and efficient service.

To the Readers of the American Fancier.

In assuming the position of editor and advertising manager of the AMERICAN FANCIER, I have practically the same announcement to make to you that I did to the readers of The *Poultry Item,* now a sister publication to the AMERICAN FANCIER. My policy is well known to the fancy and I am pleased to state that I am in a position where these policies can be carried out. My policy in the past shall be my motto for the future. An honest fancy will be my first thought and consideration, and I will oppose dishonesty whether in or out of the show room. And I would rather issue the AMERICAN FANCIER without a single line of advertising than carry the advertising of disreputable breeders. I also think show reports should be published in full where we are officially represented, and not try to shield our advertisers at the expense of the buyer. Remember I have no friends to serve or enemies to punish, but I am always ready to strike in defense of an honest fancy, justice and fair play to all. I cannot please you all. No man ever will; but I was always firm in the belief that there were enough honest fanciers to support an honest journal.

We intend giving our friends and patrons the best reading matter possible. I do not believe in the man who never had any actual experience trying to teach the man who has been a life-long fancier and breeder. I want reading matter from men who raise, feed and care for poultry and who have experience with present-day methods. Not hash and croquets written by men who make it a practice of relieving publishers of a few dollars, and then tell us how their grandfathers raised chickens without incubators and brooders.

I assure all my readers and the entire fancy that I will do my best in the promotion of the fancy poultry industry, and that you will always find the AMERICAN FANCIER on the side of right and justice. With this policy mapped out I ask your support and influence. With your co-operation and influence we can make the AMERICAN FANCIER equal to any poultry journal published. It will visit your home semi-monthly as heretofore.

F. W. DE LANCEY.

Hello Bill:

I am addressing Editor, Fancier, Critic, and Judge at most all poultry shows, Judge "Willie" Denny.

He who wrote the report of the Allentown Show for the A. F.

Prominent member of the A. P. A.

Our meetings have always been very cordial.

It always seemed to me we were the best of friends.

Why did you do it, Bill?

I did not see you at the A. P. A. meeting at Allentown.

Where did you get the report of the meeting you wrote for the American Fancier.

If you will read what I say about it in another part of this paper you will surely see what you say is unjust.

Don't you think you should have investigated more carefully?

Don't you know me well enough to know I would have nothing to do with anything not right, open and above-board?

Don't you know that what you wrote tends to injure the Pennsylvania State Branch?

Don't you know what would injure the Pennsylvania State Branch injures the A. P. A.?

You and I should try to build up—not break down.

Now come, Bill, own up. Acknowledge the mistake, and tell us how came you to make the mistake—clear the atmosphere.

W. Theodore Wittman was the presiding officer. He conducted the meeting.

He entertained and put the motions. He recognized every one who wished to put a motion, a nomination, or argued a question, so how could it have been cut and dried?

You have always proved big and broad minded enough to correct your mistakes.

Do it Bill. Let's hear from you in the next issue.

Yes, no matter where we are officially represented, whether it be New York, Boston, Philadelphia, or the little show in the country village, we will give you the winnings in full.

* * *

The next few months mean much to the AMERICAN FANCIER. It has made great progress during the past few years. For this we can thank the fancy who loyally supported it. And we realize without this support we can accomplish nothing. With the support the present management of the FANCIER and the broad field open for a semi-monthly, we feel safe in saying the coming season will see wonderful improvements to the FANCIER.

* * *

No fake advertising will be permitted in the columns of the AMERICAN FANCIER if we know it, notwithstanding the fact that other journals may be carrying the same ad. Even this will fail to convince us if we are sure it is a fake pure and simple. It matters not to us what others do, we have our own convictions, and will act accordingly.

* * *

Some poultry associations offer a Madison Square premium on a 25c entry, and a 15c admission and then wonder why the show is a financial failure.

* * *

We are going to make supreme efforts to double the circulation of the AMERICAN FANCIER and this can easily be accomplished if our present subscribers will lend us a helping hand. We are not going to ask you to do it for nothing, and if you will send us just one, we will extend your own subscription one year. We ask all our readers to read our co-operative offer, which we know will interest you all. We ask every reader to show this current issue to his friends and neighbors and secure their subscription. Do not fail to read our great co-operative offer.

* * *

The time is coming when every city, town and village will have a poultry show. During the past few years the growth of the fancy poultry industry has been tremendous, and with it all the price of eggs and meat still soars higher and higher, until eggs are a luxury restricted to the few and well-to-do. The demand for thoroughbred poultry has also increased, caused by the American farmer realizing that there is a great profit in poultry, and that the thoroughbred and the 180-egg-per-year hen beats the old common mongrel to a frazzle. No better opportunity presents itself to the young man of today than a thorough knowledge of the poultry industry.

* * *

Howard L. Davis Will be the Associate Editor.

Mr. Davis is well known the country over as an advocate of the square deal, a forceful writer who says something every time and fearless in his defence of an honest fancy. As nearly all poultrymen well know, he has been prominently before the poultry world for a number of years, and has made a grand success of the poultry business. Few men can write more entertaining and down-to-the-point articles than Mr. Davis. He is now president of the Pennsylvania Branch of the A. P. A., and general eastern agent for Geo. H. Lee & Co., Omaha, Neb., with a large store at 45 N. 13th St., Phila., where he will have charge of our Phila. office. We know their announcement will be pleasing to our readers.

Many Prominent Breeders Will Be Identified With Us.

O. E. Remson, proprietor of Greenberry Farm, Annapolis, Md., will be one of our regular contributors. O. E. Remson and Geenberry Farm are familiar names to the poultry world, and articles coming from the pen of Mr. Remson have been read with much interest. Our readers can look for some rare treats, timely and instructive articles coming from this well-known writer.

Fred A. Sotter, Douglassville, Pa., general manager of the Douglassville Squab Co., one of the largest and most successful plants in the country, will look after the interests of the pigeon men so far as the homer and squab end are concerned, and those who have read Mr. Sotter's articles will agree that the success of this department is assured in the hands of Mr. Sotter.

John L. Purple, Field Representative.

John L. Purple, more familiarly known as Uncle John, will be our traveling representative, with headquarters at Columbia, Pa. John needs no introduction. You all know him, and when he calls on you and tells you about America's best pair, the *Item* and FANCIER, we know you will enjoy his visit. His word is just as good as his bond. He will have all the Middle and New England States to cover, and will be assisted by special representatives in many localities.

A New Poultry and Pigeon Regulation for the District of Columbia.

The following police regulation was promulgated September 10 and put into effect October 16, 1908. It is similar, though a bit more stringent than a regulation imposed on the poultry and pigeon fanciers of the District of Columbia about two years ago. It differs in that the previous one required the consent of 75 per centum of the residents within a radius of 100 feet of a poultry house or a pigeon loft, whereas the present regulation gives the Health officer entire jurisdiction.

The old rule was beaten in the courts on a test case of Mr. Albert M. Keen, supported by all the well known fanciers of Washington and the Columbia Poultry and Pigeon Association. The same procedure will be followed again with Mr. A. Denekas as the martyr to the cause. He will be ably supported in his good work by all the fanciers of the D. of C. It is, however, doubtful that the Columbia Poultry and Pigeon Association will or can be of any assistance in the legal battle, owing to the fact that the majority of the stock is held by residents of Maryland and Virginia.

It is to be deplored that these regulations are made. It of necessity hurts the fancy, as is apparent by the number (especially boys) who have already become frightened and are trying to dispose of their birds. Indeed I note the advertisement of one of our leading Pigmy Pouter breeders offering his entire stock for sale.

The cause of the regulation is likely some neglected and filthy shacks or lofts which are allowed to exist (not kept) by those who, either do not know or do not care how to attend to the scrubs they have, to say nothing of high class specimens. It is, of course, the duty of the health officer to discover these places, though I cannot believe them unhealthy to humans, no matter how unsanitary for the birds. It is also as likely that this said officer knows nothing of the many well kept and sanitary lofts where unlimited care and attention is a pleasure as well as a necessity to the owner for reasons of profit as well as pride and hobby.

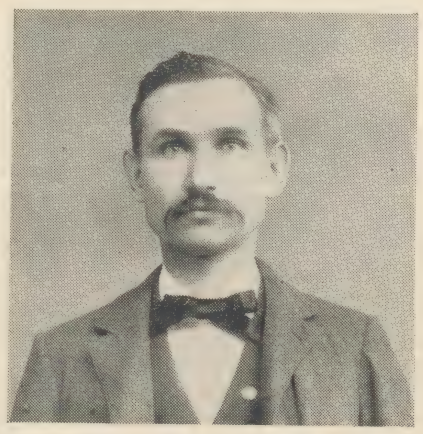
There is never a complaint against such well conducted lofts for they are a thing of beauty and pleasure —not a nuisance.

How, in this sense there can be made a distinction between Homers and other varieties of pigeons, is more than I can detect. To all intents and purposes so far as sanitation is concerned, a pigeon is a a pigeon and I have never heard that Homers are credited with a vast fastidiousness as to neatness. However this may be, it is a discrimination against all other varieties. Should the regulation be enforced it will offer permanent positions for several pigeon judges, and good ones too, for I have seen many birds called Homers which would tax the ability of experts to decide.

The Regulation.

(Official.)

Office of the Commissioner of the District of Columbia.



Washington, D. C., Sept. 10, 1908.

Ordered—That Section 6 of Article VII of the Police Regulation of the District of Columbia be and the same is hereby amended so as to read as follows:

Sec. 6. No person shall keep any kind of domestic live fowl or pigeons, within the District of Columbia, on any lot or parcel of ground or premises any part of which is within 100 feet, measured in a direct line, from the nearest part of any dwelling house, or any structure used for human habitation, occupation, or assembly whether in any event the same be in the same or adjoining block or square. If any block or square has 75 per centum of its territory improved said fowls or pigeons shall not be kept therein without a permit from the Health Officer of the District of Columbia, which permit shall prescribe the condition under which such fowls and pigeons may be kept: Provided, That nothing herein shall apply to such fowls or pigeons confined in coops in regularly established provision or commission stores or public markets, or to homing pigeons, or to fowls brought upon the premises and kept for a brief period, not to exceed twenty-four hours, for consumption.

Any person violating any of the provisions of this section or any condition contained in any said permit from the Health Officer of the District of Columbia shall be fined not less than two dollars and not more than ten dollars, and each day such fowls or pigeons are kept in violation of any of the provisions of this section or any condition contained in any said permit shall be deemed a separate offense.

HENRY B. MACFARLAND,
WM. KEELEY, (Acting).
Commissioners, D. C.

L. G. PLATH, York, Pa.
America's foremost breeder and judge of pet stock, who will edit the Pet Stock Department of the AMERICAN FANCIER.

STANDARD OF PERFECTION.
Criticisms and Suggestions.

A general invitation is hereby extended to every fancier who has bought at any time a Standard of Perfection, to offer criticisms on said Standard and make suggestions for its improvement. Such criticisms and suggestions may be sent to Fred L. Kimmey, Morgan Park, Ill., Secretary of Committee, and will be by him referred to the Revision Committee of 1910.

The Committee meets in April, 1909, and the criticisms and suggestions must reach the Secretary by that time; but to receive the full consideration they deserve they should be sent as soon as possible.

CHAS. M. BRYANT,
President American Poultry Asso.

CONTINUOUS ADVERTISING

A yearly ad. is better than just inserting one now and then for it keeps the name always before the public and one cannot tell just when the readers of a magazine will reply.

Many of our advertisers have received from a single order enough profits to more than triple the cost of the entire year's advertising.

One of our classified advertisers reports that he has sold almost a thousand dollars worth of birds from his classified ad. Many others have sold from $200 to $900 worth.

If your proposition is right, a classified ad. in these columns simply can't help but bring you good return.

It has proved a profitable investment to many and we have hundreds of unsolicited testimonial letters, copies of which we would be pleased to furnish you upon application.

Leonard W. Lott & Co. conducted at an enormous expense, three extensive subscription campaigns which brought to the AMERICAN FANCIER a quantity of quality circulation, which has brought returns to our advertisers that are really phenomenal.

We are working hard on another subscription campaign which will bring a great increase to the present circulation.

Better get your ad. in the next issue.

BUCKEYES

HOUGHTON'S BUCKEYES—THE PREmier Reds. High scoring birds. Stock from the originator. I won five 1sts, three 2ds, two 3ds, one 4th and five Specials on ten birds at the Bradford 1908. The breed that lays, the breed that pays. Eggs $3.00 per 15. James Houghton, 55 Bennett Brook, Bradford, Pa.

BUCKEYE—THE I. X. L. STRAIN of Buckeye Reds; the greatest utility fowl for fancier, poultryman or the farmer; they are second to none; eggs at $1.50, $2 and $3 per 15; cockerels from $2 to $10 each; write. F. E. Phillips, R. D. No. 7, Basom, N. Y.

BRAHMAS

NETTLETON LIGHT BRAHMAS ARE line bred for business; shall have a nice lot of high class exhibition birds for the Fall exhibitions; some extra fine Columbian Wyandotee Chicks; also a few yearling hens to spare.

THE SILVER LACED WYANDOTTE CLUB OF AMERICA.

Cash Specials Offered at Boston, Chicago and Kansas City and Elegant Blue Silk Ribbons at Many Local Shows.

The Silver Laced Wyandotte Club of America asks every lover of this breed to join our club. Every member can compete at any show for the specials offered. This year, instead of cups, the officers are offering cash, as follows:

At Boston—$10.00 for the best cock, hen, cockerel and pullet; $6.00 1st prize breeding pen; $4.00 2d prize breeding pen.

At Chicago and Kansas City—Same as above, or $20.00 at each of the three shows.

The Silver Laced Wyandotte Club ribbons were acknowledged to be the most beautiful ribbons ever offered at any poultry show, and these ribbons will again be offered at such shows as have asked for them. It is, of course, understood that all specials can only be competed for by club members.

Application for membership, together with $1 dues should be sent to E. S. Tarbox, Secretary,, Yorkville, Ill., on or before December 10, 1908, and this will entitle every applicant to compete for all specials, cash and ribbons wherever offered.

The Silver Laced Wyandotte Club is distributing, free of charge, a very handsome club catalogue, and same may be obtained by writing to E. S. Tarbox, Secy., Yorkville, Ill., or the undersigned.

We would be glad to enroll 200 new members. Any information wanted at any time will be cheerfully furnished.

HENRY STEINMESCH,
President.

The Fantail.

Of all the varieties of pigeons and their great diversity of color and characteristics, none is more beautiful than the Fantail. Their beauty and carriage is not only the admiration of the fancier and breeder but in all exhibitions they are admired by countless thousands as a thing of beauty surpassing anything in the exhibition. The up-to-date Fantails of today are really more beautiful than the pictures we see of them. It is science to breed a fine show specimen, and an art to train it so it will show its beauty and carriage in the show room to the best advantage and the admiration of all.

No matter how well an individual specimen shows up in the loft, make up your mind your chances of winning in strong competition are very slim unless you get him accustomed to the exhibition coop and to being handled. Fine specimens in the loft placed on exhibition without training, will be very much scared, fly about the coop and injure their feathers, and show no shape in comparison to that which they showed in the loft, and oftimes by lack of training, specimens that could win the blue, are defeated by otherwise inferior specimens. The important points in the make-up of a good Fan are, first, size and shape of body and tail, full round chest, the neck thin and swan shape, tapering as it approaches the head, which should be small and fine, and rest on the cushion of the tail. The tail, of course, is the main thing, and shaped like a fan, from which it derives its name. It should be carried well up and evenly balanced, and should be slightly concaved and circular, with long, broad, evenly set feathers closely overlapping each other and as thick as possible in the center.

Important to Pigeon Breeders.

The American Fancier has always been recognized as a leading pigeon paper and it is our intention to make this department a leading feature. However, this cannot be accomplished without your support and co-operation. Hence the success of this department is largely in your hands, and we want each one of you to take an active part in making it the largest success possible. Already arrangements have been made with Mr. Sotter to handle the Homer Squab end and before another issue goes to press we hope to have arrangements made with the best pigeon man in the world. Can you guess who it is? Now give us your support, send a contribution, halftones and the news.

ILLUSTRATED DISPLAY ADS.

The illustrations in these ads. are made without charge from photographs sent us by the advertisers. The cost of these illustrated display ads., which measure 1¼ inches, is **$3.00** per insertion, cash with order, or **$18.00** for **12** insertions (6 months) making $1.50 per issue, payable quarterly ($4.50) in advance. **$24.00** for **24** insertions (one year) making $1.00 per issue, payable quarterly ($6.00) in advance. We make the illustrations from your photograph without charge and you can change the wording of the ad. as often as you desire.

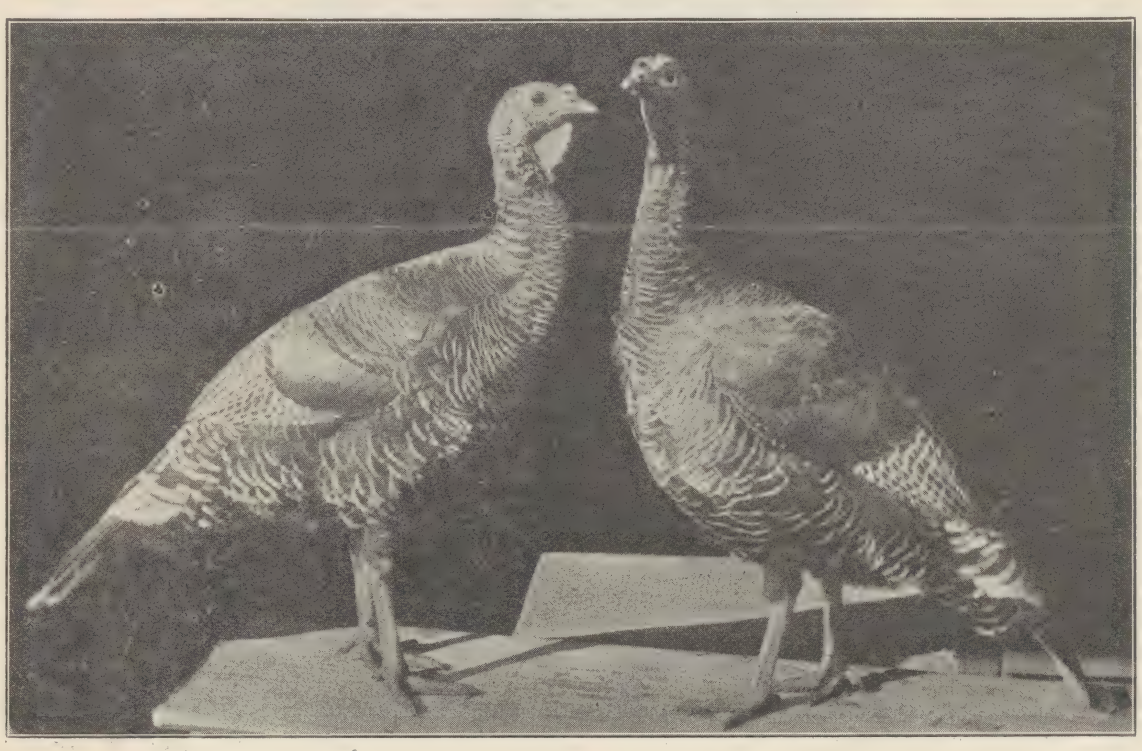
Requirements of a Fancier

Written Expressly for the American Fancier



HOW does he do it?" "What is the secret?" When a man succeeds such questions burn in our hearts. Rightly, too. The man who refuses to study the qualifications and methods of his successful neighbor, is 20 centuries out of date. He is with us but not of us. The man who is alert to every requirement, and acquirement, is bound to be at the front. He may not wield a heavy lance, but a lance he'll wield! And we'll hear from him.

I believe there are at least six primary "requirements" of the successful fancier. Others you may think of, these will be suggestive:

I. Passion at White Heat.

A love, an enthusiasm, a *passion* for the Fancy. To succeed in any line there must be this passion for your work. Especially is it needful in the one who would excel in raising fine fowls. I pity the beautiful bird that falls into the hands of one who does not love it. Great orators have had this passion for their work—great merchants, great lawyers, great scientists, they must have it. Wendell Phillips was fanatic named and fool." They could not analyze him. We see it now. His soul was on fire. His passion was at white heat. This requirement is surely first in time if not in importance. Given this, we are well begun. Whittier was right when he wrote:

"Love has never known a law
Beyond its own sweet will."

MADISON SQUARE WINNERS—Owned and Bred by BIRD BROS., Meyersdale, Pa.

II. Vision, Long and Broad.

"Young men, bring things to pass!" President Anderson used to say. That is what we are at. The street phrase is to "get there," or be "onto your job." How can this be without the "vision, long and broad"? The fancier who can't see beyond the present month, the present season, is vitally weak. His great need is a field-glass of business foresight. This can be acquired. Look out into the distance, pierce the gloom as best you can! By exercise this supreme mental power will be greatly strengthened.

"Vision, long"—a quarter of a century in advance. You can't see distinctly that far, but look toward it. You will soon be there. Then what? "Vision, broad," that is, look to right and left, as well. Ambushes are being organized. See them. Be ready to adjust yourself to them. The general knows where the army is going, the private see only one step in advance. Sleeps where he stops, and asks no questions.

Which will you be, general or private?

III. Judgment, Keen, Decisive.

Few cases are utterly hopeless. Yet, more fanciers fail for lack of "common sense," another name for this same thing, than for any other reason. I believe in *men* more than in methods. Judgment is the large part of the man. Judgment, keen, unerring, will make a way in any thing. This is largely the difference between men of achievement, and men of failure.

Exercise your judgment. Cultivate it to its utmost. Pick up your fowl and judge it yourself, according to the "Standard." Judge keenly, discriminatingly, decisively. Judge the market conditions, advertising mediums, your houses, your feed, your prospects. Here is the gate of success: well-balanced judgment. Remember "the good is the enemy of the best." Don't let them write over your financial grave "BAD JUDGMENT!"

IV. Education, the More the Better.

Can you write a letter correctly, interestingly? If not, study an hour every night until you have become skilled in this fine art. Five customers, out of every ten, you are likely to lose if you are weak in the letter-writing business. The Fancy is brain-work ten fold more than brawn-work. Greek and Latin are little in demand, but a good, solid training in the common school branches, and in as many of the sciences as possible is half the battle. The universities are sending out droves of thoroughly trained fanciers. By the side of these, the man with no education is handicapped beyond measure.

"He is a man of letters in love with life," said some one of Mr. Roosevelt. The more of "letters" the fancier has the better his chances for pleasure as well as profit.

V. Daring, Sane and Discreet.

Fanciers get discouraged because they dare not venture on. And there's the danger! They must venture, but let them venture discreetly.

"I never count my dead," said Grant. He dared to undertake great things; but his daring was sane and discreet. He knew the outcome. "How much did you pay for that bird?" "One hundred and fifty dollars." But he was the winner at the New York show. In a few weeks he had paid for himself. This requires daring. But be sure of your ground before you try such a leap. "Be sure you're right, then *go ahead!*" That is old, but always good. "Take your men in anywhere!" said the general to the young officer. "There's good fighting all along the line!" So with our Fancy. Can you do the fighting? That is the question. Of course you may play at the business, that is another matter.

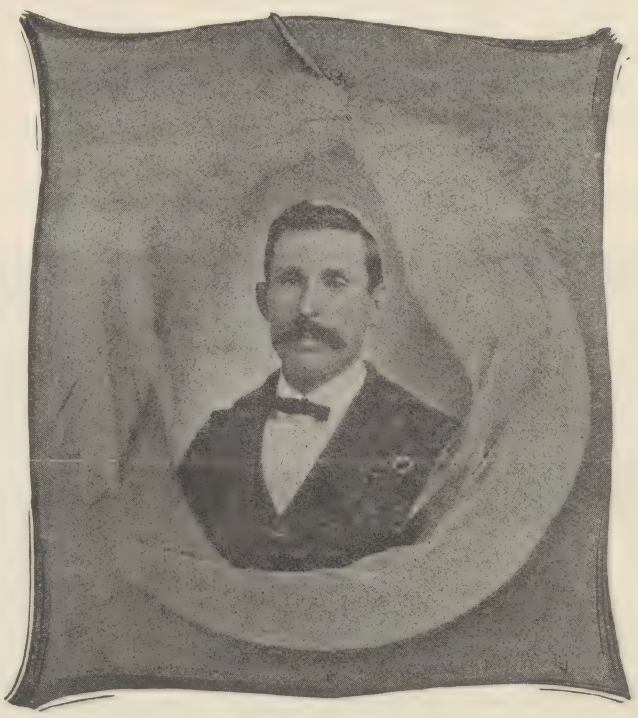
VI. Conscience, Clean and Virile.

Some one has said that Napoleon had the "intellect of an archangel, and the heart of a tiger." We want men with hearts that are right as well as intellects that are great. There is no room for the "faker" here. A "faker" is one who originates a "humbug," or a "swindling contrivance." The man who fakes his exhibition birds, and so represents them to be what they are not, should be spotted by the fraternity, and avoided as any other swindler and scoundrel. If I paint a black horse white, is he therefore a "white horse?" The Fancy is getting to be a great business in this country. Its future is beyond compute. It is "up to us" to see that the *"Square Deal"* is kept to the front.

The Production of Stay-White Fowls

Written for THE AMERICAN FANCIER,
By O. E. REMSEN.

Once you have established a foundation of stay-white formation of plumage, color breeding so far as creaminess or brassiness is concerned, is practically an easy matter; but on the contrary, when you are obliged to "breed up" this quality having had nothing but creamy or brassy birds to start with, as most of us who have made a specialty of white birds have done, it is then quite a different matter, as well as a difficult problem which has caused many of our most successful breeders of white fowls of today—a careful and deep study. Let our amateurs and would-be fanciers" of the present day be thankful that this tedious task has been accomplished for them, and that they have only to look up one of our many reliable breeders of white fowls that breed the STAY-white kind and they can obtain their foundation stock which without expert attention will breed true and white.



Remember that it is as necessary to have females absolutely white web and quill as it is the males. This is more especially true where the female may possess the stronger or predominating nature which is more often the case than we might suppose. For every creamy female in the breeding pen, we endanger our stay-white production and reproduction to far greater perils than are apparent at the first season's breeding, as all that "looks well upon the surface, may not be well within"; and the following season's matings may prove this beyond the shadow of doubt. There is one thing true in breeding a standard animal or fowl: We can*not* get them *too pure*, nor *too good;* we can, however, often produce a bird that has the "look" of a standard and pure bred bird but it is the test when we place it in the breeding pen whether, or not, it is worth our consideration.

I have seen males of the creamy kind mated to females that were absolutely white in web and quill, and fifty and even seventy-five per cent. of the offspring were creamy or even brassy and I have also noted the same result where the stay-white male was mated to creamy females or females that were not perfectly white web and quill, although the stay-white birds used in both of these experiments were bred from a line of birds that had been bred *stay-white* for more than five generations. Therefore, from the above, the importance of using only females that are white web and quill will be quickly understood if we wish to be sure of stay-white productions, for, if your birds are bred right, there is no need for you to fear the sun's rays nor the judge's decision. Shade is a great and valuable asset to a poultry yard, but pure white and stay-white fowls can be reared without.

Also guard your method of feeding if you wish to show your white birds as some grains influence the quill and under-color of young birds and old birds that are moulting or just moulted. If a bird turns straw color upon the surface of its plumage, when exposed to the direct rays of the sun, it is *not* a stay-white bird and the formation of its plumage contains too much yellow pigment, such a bird *must* be kept in the shade if you would keep it white, also must not be fed upon oily foods or foods containing strong coloring, as such food acts directly upon the pigment and thus the plumage is further impaired. A bird being creamy in quill or under-color has no chance to win the blue now-a-days; time and the science of breeding has promoted our white birds and they now stand proudly in the *stay-white* class. No amount of washing will whiten the creamy or brassy birds which may be improved by conditioning but will never be able to compete with its *stay-white* competitor and for strong competition we would only be wasting our time upon such specimens.

It will now readily be seen by those who contemplate breeding white birds or those who may be breeding them unsuccessfully, that if we expect to keep apace with time and would be successful with white fowls in the show room, we must first give our attention to producing specimens of standard proportions that are white and will *stay* white. If we start wrong we are apt to remain wrong, or become disgusted at our own failure to capture the blue and sell out our white birds for some less worthy colored specimen of which we know nothing and which after all may be far more difficult to breed true than our white birds. Two things should be borne in mind: First, that you buy from reputable breeders that have proven their right to be known under this heading; second, that when you mate up your birds each season, make a deliberate and careful selection of each and every bird you place in the pen.

In conclusion, I will say, that breeding for show points, whether it be shape or color, is no easy matter and cannot be learned in a day, but requires careful thought and study; we have the truth of this statement from the number of fine specimens seen in our large shows each year shown by experienced breeders, but how many of these win the blue? We must pay strict attention to the little things as well as the large ones if we will succeed as fanciers and produce winners.

One of the Country's foremost breeders of White Rocks

New York Show

The Twentieth Annual Exhibition of the New York Poultry and Pigeon Association, will be held in the Madison Square Garden, on December 29, 30 and 31, 1908 and January 1 and 2, 1909.

This will probably be the last show in the Garden, as it is offered for sale. It will be under the same management as in past years, we have engaged twenty-nine of the best judges in this country and Canada.

Just to show what the sales are at New York show, I will quote you a letter of Mr. Ernest Kellerstrass, of Kansas City, Mo., "We have done something like $16,000.00 worth of business in the past year traced to New York show—I always tell wherever I go that I would sooner win a first prize at Madison Square Garden, than at any other show in the country. For the simple fact, that your show has the reputation and is run on the square", I want to thank you for the treatment that I received at your show last winter and say that I would not have made the sale of Madame Paderswska if it had not been for the New York show I am enclosing you a check for fifty dollars to be placed on White Orpingtons, as you see fit, donor not to compete.

Entries close December 14, 1908.

H. V. CRAWFORD, *Secretary*,
Montclair, New Jersey.

If You Want a Silver Cup, Show at Baltimore

The Quality Show that has one of the largest and finest collections of silver cups and many other handsome specials ever offered by an association. These cups and specials have been placed upon the poultry and pigeon classes to be won *outright,* this does not mean that Baltimore holds the cups and allows each exhibitor in rotation for the next ten or twenty years, to take turns at winning these cups—but it is *yours* if won but *once.* The liberal way in which these cups have been offered shows that the management is working for the best interest of the exhibitors.

Interest has not, once, been lacking in this show from the start and valuable specials and handsome silver cups have been donated from all parts of the country.

If you desire to exhibit at a model show—then don't miss *Baltimore,* for there will be many surprises in store for those who go, and many regrets on the part of those who stay away.

The Premiunm List will be out in a few days and no exhibitor should be without one. Send at once to the Secretary, G. O. Brown, 1812 North Washington street, Baltimore, Md. Mention THE AMERICAN FANCIER.

The Baltimore Show is going to be a *Winner,* so let us march on to *"Maryland My Maryland."*

The *Program* is—*New York—Baltimore— Boston—Philadelphia.*

O. E. REMSEN.

Cincinnati A. P. A. Show, Ohio Branch

The Cincinnati Poultry & Pet Stock Company incorporated under the laws of Ohio, Capital $5,000.00, will, January 12-16, 1909, give its Eleventh Annual Show, and we have a record of always paying our premiums.

There have been no breaks in the ten shows we have given, one each year, this we consider quite a record.

This year the American Poultry Association, Ohio Branch, give their show here.

The show will be cooped with Empire coops, will have an Institute, at which men of National reputation will lecture.

Several clubs will meet with us, have a number of State cups offered, and ribbons for all varieties.

Premiums: $3.00 first, $2.00 second, $1.00 third, with special of $10.00 for each variety.

Judges, S. T. Campbell, Mansfield, Ohio; Geo. H. Burgott, Lawtons Station, N. Y.; Loring Brown, Smyrna, Ga., on Poultry and F. C. Borcherdt, Jr., Manitowoc, Wis., for Pigeons.

We have a fine array of judges and with our past record of square dealing, good and prompt payment of premiums we should draw many entries.

Premium lists will be ready early in December and will be mailed promptly by applying to Julius Friedeborn, Secretary, 139-141 West Sixth street, Cincinnati, Ohio.

THE LAYER.

A good laying fowl is made as well as bred. A bird that would have been a good layer can be utterly spoiled. No bird can lay well if its constitution has been ruined in the bringing up. I know that the ordinary run of farmer thinks that the chickens can scratch about anywhere and want little from him except a little corn; perhaps also a little meal, and he is right very often, for in that very scratching about the youngsters get the grubs, worms, crysalides, flies, etc., which provide them with excellent food and they get fresh young grass straight from the plant. But how about chickens that have not these opportunities, nor those for getting grit?

A young layer wants bringing up upon natural foods—a variety, and such a variety as will imitate the food it can pick up on a wide range Cooked meat, kitchen scraps, varieties of meal, will all make it thrive with a little corn of a non-fattening kind.

The sooner a novice understands that a fat bird cannot lay as it should do, nor yet a lean, scraggy bird, the better. The cold, pinching days get hold of the latter, going through its very bones and marrow, and chilling it. Being off condition its feathers are scanty and open, and its skin very susceptible to chill. A fat hen is much hindered in the output. Her eggs are often few, double-yolked, or un-shelled, or showing some other signs of the hen's debility. Laying hens cannot be fed on mere rule of thumb. On cold, piercing days they want a little fattening food. On mild days this should be of scraps, biscuit meal, barley meal and such substitutes, with a little sound oats or wheat. The birds should always be so that they will run after the feeder. Water is imperative as the greatest portion of the egg is water.

Feeding the Rabbits During Winter.

In the morning I feed them good grain, I use one-fourth wheat and three-fourths oats mixed. I give a give a handfull of grain to each rabbit about two to three months old, full grown rabbits I give about two handfulls, either more or less, as I see they require. You can tell best how much to give, as some rabbits eat more than others. This grain I feed five mornings a week, the other two mornings I give them a mash composed of three-fifths bran and two-fifths corn chop mixed. I salt the mash good and mix it with hot water, and leave it stand till about luke warm, then I feed it and give about as much as they will eat up clean in an hour. I mix the mash so it is crumbly.

I give them fresh water every morning and leave the water in the hutch till evening, then I empty it out on account of freezing over night and breaking the dishes. My dishes are made of clay, one-half inch thick, they are round, in diameter they are six inches at the bottom and five inches at the top, so that they cannot upset them; they hold a pint and a half of water.

I do not give them anything at noon; in the evening I give each one a hand full of hay, or as much as they will about eat till the next evening. I also feed green feed in the evening, in the shape of beets. I am feeding sugar beets and mangle wurtzel; I give each one a piece of beet about the size of a medium sized apple, of course I give according to age and size, young ones I do not give so much. The green feed does not need to be the same as I feet but carrots, red beets, apples, lettuce, celery leaves, are all good for feeding. It is alright to give a little green feed in the morning, I only give green feed in the evening.

The National Columbian Wyandotte Club will hold its annual meeting at the Madison Square Garden Show, New York, Thursday, December 31, 1908. Edgar E. McIntosh, Secretary-Treasurer, Darien, Conn.

Orpington Type

By H. H. Kingston, Jr.,
Rochester, N. Y.

Type makes the Orpington just as surely as clothes make the man, merely having white legs and grand color doesn't constitute being an Orpington.

The true Orpington stands low on massive legs, has heavy bone, a deep body with great breadth of back. Breed for these points and fix them, then get after color.

I have bred birds which in the show room would be disqualified, but which were strong even to exaggeration on type. One male in particular, a big, husky S. C. Buff with immense shanks, deep body and broad—he had a four point comb with thumb mark and side spring, was fair in color, but light under hackle. I mated this bird to eight pullets with perfect combs and splendid color, every pullet was strong on type and over weight, the result was most gratifying, the chicks showed great size of shank from the first and developed into big, vigorous stock birds of wonderful type. Next season the best pullets were mated to a smallish cock, a marvel in color, perfect comb and grand type, but under weight as a show bird. Result, cockerels of correct type, good color and side springs in an average of only one bird out of ten. Pullets with extra large shanks and great depth of body, color is fair and fine size, they promise to go over weight every one of them. The largest and best colored of these, even if only two or three of them, will be mated back to their father next year with the idea of improving both color and type.

From this experiment I would be very careful before marketing any culls, but rather keep the most promising till they are fully developed. Now, when breeding with disqualified stock there are some that I wouldn't use under any consideration, namely birds with feathered shanks and birds showing the faintest sign of mealiness, these being the two hardest faults to breed out.

A good general rule to follow in breeding for type is to use big, roomy females as they give size, and generally speaking, the male gives type and color, consequently a smallish male can be used without detriment to the size of the progeny. Like all good rules there are exceptions—pullets bred from standard sized stock but stunted in growth may be successfully used in the breeding pens.

If more of my fellow breeders would look at their Orpingtons with an eye for type and forget the color entirely there would be some surprised fanciers at the general lack of type in their yards.

I have visited establishments as far South as Georgia and a liberal estimate would be about one yard in four having fair type. Many have ideal color with Plymouth Rock and Wyandotte type, which are Orpingtons in name only.

Such breeders are good fellows, enthusiastic and could do much for the Orpington, instead of as at the present retarding the breed by their mad rush after color.

Fellow Orpington breeders, watch the careful judge at the shows this winter and notice how he puts the ribbons on the birds showing strong type, and notice how those beautiful colored, pink legged, Rock type birds get the gate; then go home and look yours over and make up your mind that in your yard you are going to have Orpington type.

* * *

Do not expect that everything will be gained, and nothing lost, in poultry raising, any more than in any other kind of business. A wise man allows for contingencies, and probable losses, when he undertakes any work for himself or another. If it is merely work, he must caluculate on rainy days, on sickness in his family or himself, on various hindrances that this world of change and chance brings to us all. Yes, he must expect these mischances, so that he may possess his soul in patience, when the evil day of disaster comes. Plan, therefose, for a certain per cent. of loss, and if good luck, which is the result of good managemnt, prevents you from suffering, so much the better. If you do lose, it is only what you expected, and are prepared for, and, without being disheartened, "thank the Lord that it is no worse," as the English king said when defeated in battle. Learn from failures to do better next time, for experience is a good teacher in the poultry yard.

La Fleche

Editor American Fancier:

In the September 15 number you have a picture of a La Fleche cock, whose comb seems to me to be too sloping. It is now a long time since I kept this little known breed, which produces one of the highest priced table fowls of Paris. In spite of black legs they are unquestionably good eating and few breeds can equal them on the table. The flesh is extremely tender, more so even than that of Dorkings. They are great layers of very large eggs, and like all the French breeds, the cockerels are very peaceable, even when six months old, which is the age at which most of the English and American breeds begin to fight hard, especially if in runs. With so many virtues why is it kept so rarely? Poultry books tell us it is extremely delicate and much affected by damp or changeable weather. Much the same is said of its first cousin, Creves. I had a large flock of the latter in Montana and had no trouble raising them. They too, were very good layers of large eggs and laid all winter. I never knew one to sit and have found stolen nests which when full of eggs were deserted. From the American point of view, La Fleche have one failing—they grow slowly and in consequence are not a broiler breed. When full grown, however, they are a large fowl, a good cock weighing about nine pounds or ten pounds. Like the other French breeds they are naturally tame. Some of those in England had small crests and people who have bred Creves if they have bred any quantity of them will have noticed, that when a Creve cockerel has longer legs than usual, it generally has a much smaller crest. Are La Fleche then only Creves with the crest bred off? Poultry books tell us they are probably produced by crossing Malays or similar fowls with Creves, and one year I thought I would try if Indian Game cocks and Creve hens would produce a fowl much like the La Fleche, but though two Indian cocks were kept with the Creve hens, they never mated and all the eggs were unfertile, the cocks mating only with some Rock hens that were with them also. I have at one time and another kept most of the rare breeds and had no trouble in raising the chickens and I think a great deal of the imagined delicacy arises from people trying to breed them on two small a scale and also interbreeding too closely. Books tell us crested fowls must be carefully kept from getting their crests wet or they will get roup. My Creves had about half an acre or more for a run, and when it rained got just as wet as the other fowls, but I never noticed that it did them any particular harm and I think at one time I had about fifty of them and if I remember right, one year I had 102 chickens, half of which were Creves and all of which lived. The white in the crest of Creves was always a trouble, and in this respect La Fleche would have an advantage over them, and these latter, if you have good stock to start with, do not produce many culls. Crested breeds would be much more kept if the standard did not make size of crest a point, as heavily crested birds cannot see well and consequently are dull and mopish. It is, too, I believe, a fact that Americans do not care for black fowls, just as they are said not to like sorrel or chestnut horses, though in neither case is the color any detriment, but fanciers of this kind are not easily got rid of. All poultry do much better if kept clean, but I think the French breeds suffer more from dirt than Rocks and other American breeds. In breeding La Fleche it would of course be much better to have two year old or older hens to breed from, they producing much stronger chickens, but this applies to all breeds, especially the larger ones, and chickens from old hens eventually make much the largest fowls.

C. CLIFTON.

Why I Breed Columbian Wyandottes.

I shall be as brief as possible in stating why I breed Columbian Wyandottes. I have been raising thoroughbred birds for over twenty years and never could settle down to one variety until seven years ago when I seen a pen of these beautiful Columbian Wyandottes and made up my mind that this was the bird for me, knowing at the same time that there was lots of room for improvement, especially in the show room, as all know who has followed them up in the six or seven last years. When I started breeding Columbian Wyandottes I wanted the very best that money could buy, and purchased several birds and some eggs at twenty ($20.00) dollars per 15 eggs and started on the long journey of trials and misfortunes. I expected to do wonders when I started, but to my sorrow I was sadly disappointed in producing such specimens as I wanted, to see but this did not discourage me, as I kept on improving each year until I had a flock equal to the best in this country, and to-day my flock is far superior to my foundation stock. A word or two to the beginner if it is not out of place or getting away from my subject. When you start in breeding any variety do not buy cheap stock at any price, as you will be sure to meet with disappointment. Take my advice (if of any value) and purchase the very best that the country can afford, regardless to price. You cannot buy choice specimens at a mere song, but make up your mind to pay a living price and get on the road to success. I have found in the 7 years of my experience that if the Columbian Wyandottes are given a chance there will be a nice balance on the right side of the ledger. They will lay as many eggs of nice brown shell as any other variety under the same conditions. I do not except any. The young stock is always ready for market after 10 or 12 weeks old. They have nice plump bodies and fine flavored meat. You cannot realize how fine they are unless you have a fine plate of fried Columbian Wyandottes before you, of course, you must have a tooth for chicken, otherwise you could not relish same. When you wish to use them for brooding purposes you have something that will attend to her duties faithfully and raise a nice litbank account. I will try and give my opinion of a beautiful Columbian Wyandotte. The standard of perfection gives out lines of the Wyandotte shape which includes all varieties in the Wyandotte family. As to color they should be pure white over the body with black neck and tail, also black wings. The hackle feathers should be black and laced with pure white lacing around the entire point of feather. The black should run clean down to the skin. The tail should be solid black to the skin with nicely laced tail coverts. The wings should be black with the primaries edged with white. Now, when you have such specimens you have something that will attract the attention of the most skeptic. The Columbian Wyandotte has a great future before them, as they are equal to any in egg production, good mothers, and for utility they s and alone. When you are successful in raising some choice exhibition birds you do not have to hunt for buyers, as they hunt you and are willing to give long prices. The Columbian Wyandottes are one of the largest exhibits at most of all the largest shows. Take my advice and try a pen of these beautiful as well as useful birds and be in the swim at all noted shows. Hope these few lines will be of some benefit to some one.

H. D. Bruiser.

There is no set rule for feeding. No fowl will eat or require the same amount of food each meal.

* * *

When mixing the whitewash for the interior of the poultry house put in some good disinfectant or carbolic acid.

International Hens.

"The advantages that people who live exactly on the line between two countries have in escaping the customs and other regulations of both countries have often been recounted. Probably the most picturesque instance of this kind of evasion occurred in the town of Nogales, which lies exactly on the boundary between Mexico and Arizona.

"On the United States side of the line in this town eggs were at one time made costly by the revision of the tariff schedule pertaining to that product, inasmuch as the hens in that region were chiefly owned on the Mexican side and were fed by the peasants on cheap Mexican grain.

One year a Maine Yankee arrived in Nogales with an eye to business. He was convinced that his opportunity lay in the high price of eggs. Accordingly he put up a long hen house exactly across the boundary line. At the Mexican end he regularly fed his hens with low-priced Mexican grain.

The fowls ate their grain in Mexico, and then walked across the line into the United States to lay their eggs. The transaction was, of course, perfectly legitimate; for the proprietor of the hennery smuggled neither grain nor eggs. But he availed himself of high prices on one side and low prices on the other."

Written for the American Fancier by
C. T. Wells, Chester, N. H.

At this season we are seeing the results of our last seanon'c matings, are you satisfied? or can you see where you might have done something a little different and got better results? If you can, don't forget it, but profit by it and do the right thing his coming season.

Now is the time to make up your pens of pullets. Get them into their winter quarters; they will soon be ready to lay (if they are not already) and should be put into the winter houses so as not to break them up after they are laying. Do not let any of the young cockerels run with them; they will both do better to be separated.

If you haven't done so already, get rid of all those old hens, unless there are a few extra good ones you wish to keep for breeders. The young stock needs all the room you can give them. If you are going to enter any birds in the fall shows they should be separated and gotten in perfect condition. Perhaps the young ones may be a little underweight, but it don't take many days to put on a half pound if they are properly cared for.

This is considered the dull season in the hen business. Well, then, it is just the time to put in new, clean nests and put on a new coat of whitewash. Also, if you don't have a floor in your houses, take out a few inches of the old earth and put in new; and get in a good supply of road dust for the winter dust bath. I have some Buff Orpington pullets hatched in March that weigh seven pounds now. I learned how to raise them by reading such good poultry papers as American Fancier and using common sense. If you are a Buff Orpington breeder don't neglect to join the National S. C. Buff Orpington Club. Wishing you all the best of success, I will close by saying I have found it is the small, odd jobs that *if done*, help out the most in a successful hen business.

Training Pointers for the Show Pen

Does It Pay to Advertise?

The last issue of the *American Pigeon Keeper*, published some well written remarks about advertising by Mr. Chas. Ackerman, from which we quote the following:

"The results are in proportion to the merit of the birds you are advertising for sale and the ability with which your advertising is done. It will hardy pay you to advertise if you are ignorant of the real functions and workings of publicity. You must not advertise promises which will not be fulfilled, because all that advertising can do when it accomplishes most is to influence the reader of your ad. to investigate your claims.

Poultry-Feeding Experiments

by the Agricultural Experiment Station of the Rhode Island College of Agriculture and Mechanic Arts.

Experiments have been conducted at the Massachusetts Station for a number of years to ascertain the *best combinations of feeds for laying hens,* and brief statements of the results have appeared in the annual reports from that station.

"These experiments had indicated: First, that, provided fat is abundant in the ration, high protein content is not essential; second, that, if the fat content of the ration is low, a large proportion of protein in the feeds used appears to be much more essential; and third, that a large proportion of fiber in the ration used is unfavorable to a good egg product." These indications resulted from comparisons of corn with wheat, when fed in connection with animal meal, beef scrap, or granulated milk, and, at times, additions of corn oil. The nutritive ratio of the ration containing corn was about 1 to 6.5 and of the one containing wheat about 1 to 4.5. When the amount of fat was liberal, the corn was better than wheat for egg production.

In studying the effects of fiber; rice, a feed with very little fiber, was compared with wheat or oats. It invariably caused a larger production of eggs, but of course its price precluded its use except for experimental purposes.

The ground feed, which was a mixture of various grains and beef scrap, was fed in the morning, moistened with skim milk for one lot and with water for the other. The whole grain was scattered in the poultry house during the afternoon. The principal experiment included three pens of twenty hens and two cocks in each of the two lots. During the first period, June 30 to August 5, two quarts of skim milk were used to moisten the grain for each of pens 1 to 3, and during the second period, August 6 to September 30, the milk was used in pens 4 to 6 instead. Below are given the egg yields:

	First Period.		Second Period.	
	Pen.	No. of eggs.	Pen.	No. of eggs.
Grain moist'n'd with milk	1	337	4	452
	2	279	5	382
	3	246	6	386
		862		1220
Cost of the grain.....		$6.09		$11.10
Grain moist'n'd with milk	4	207	1	302
	5	202	2	363
	6	223	3	313
		632		978
Cost of the Grain.....		$5.05		$8.84

With eggs at 25 cents per dozen, the skim milk had an actual feeding value of a little more than 2 cents per quart during the first period, and 1½ cents during the second period.

The Maine Station, Bulletin 144, made a *comparison of whole corn and cracked corn for laying hens.* Certain poultrymen had reasoned that cracked corn would be more desirable, when thrown in the litter, because laying hens, which tend to grow too fat upon whole corn, would be forced to take more exercise in securing the smaller pieces. In October, 1,000 April-hatched pullets were put into ten like pens. Besides the other food, the pullets in one-half of the pens received whole corn, and in the other half an equal weight of cracked corn. The records of each pen from November to April, show that the average number of eggs per bird receiving the whole corn was, for the various pens, 84, 78, 73, 77, 76, and for those receiving the cracked corn, 79, 75, 77, 75 and 74. "There is nothing in the results that leads to the conclusion that it is necessary or advisable to crack the corn fed to hens kept for laying eggs."

Occasionally take the roosts down and wash with boiling soapsuds to kill all lice.

Put a little lime-water into drinking-water once in a while to prevent bowel complaint.

Essentials of Incubation

The Combined and Comparative Value of Heat, Moisture and Ventilation.

(Copyright, 1908, by Geo. H. Lee.)

Until the investigations carried on by the writer during the past 2 years the correct relation between Heat, Moisture and Ventilation has never been definitely understood.

It has long been known that a certain degree of heat is necessary to start and maintain the growth of the germ and that an excessive or deficient amount of heat injuriously accelerates or retards its development. It has also been known that excessive or deficient moisture or ventilation or both would injuriously affect the hatch, but the "reason why" has been shrouded in mystery.

The shell of a newly-laid egg is very porous and is composed of animal and mineral matter in varying proportion. Remove the *mineral* matter or lime by soaking the egg in vinegar or other acid and the egg covering becomes soft, leathery and pliable so that the egg may be slipped into a *narrow necked bottle without breaking.* If this is now placed in a dry place the leathery envelope will become very tough and non-porous.

Remove the *animal* matter or destroy its adhesive quality by burning, rotting or other method and only the lime is left. This is very tender, porous and brittle, and when the shell of an egg undergoing incubation is in this condition at hatching time, even a weak chick finds it *easy to break out.*

Now, it is well known that animal matter will not rot in dry air. In the meat markets of certain dry climates, even in hot weather sides of fresh meat may be left hanging in the open air for days at a time and with no apparent deterioration other than "drying up." It does not rot, but gradually loses its watery element and becomes tough and leathery.

In moist air this cannot be done. Even in a very few days the meat would become a mass of rottenness and in three weeks, the period of incubation of hen eggs, would fairly fall to pieces of its own weight.

This explains why, in a temperature of 102 to 105 degrees, the shell of an egg becomes tough and fairly unbreakable if exposed during twenty-one days to a dry air. It also explains why the animal matter of the shell will rot, leaving only the mineral or lime envelope, if exposed to hot, moist conditions during the same period.

There are, however, other things to consider. If the rotting of the shell were the only point of importance then the more moisture the air has the better it would be for hatching results. This is not the case. The porosity of the shell; the evaporation of the egg contents; the normal, healthy growth of the unhatched chick must also be considered.

Hot and excessively moist air does not seem to be conductive to a healthy growth of the germ while it does cause a rotting of the shell and porosity of the surrounding envelope. It is therefore necessary to modify the moisture so that it will give not only a sufficient weakness of shell at the end of the incubation period but also the greatest possible strength to the chick.

Big hatches often occur of weak chicks diwcult to raise. A weak chick can break out of a weak shell when it could not emerge if the shell were tough. What is wanted is strong chicks and weak shells. This gives the biggest hatches and the easily maturing chicks and is only secured by having heat and moisture properly proportioned.

There is still another element to be considered—ventilation. Ventilation means more than "purity of air." It has a definite relation to moisture in the following manner:

A stagnant body of air carrying a stated amount of mosture, say 60 per cent., has quite a different effect upon the egg and shell than does a rapidly moving or changing body of air of the same humidity. It, therefore, becomes necessary to regulate, not only the heat and the mosture, but also the ventilation or rapidity of air passages through the egg chamber if uniform results are to be obtained.

Heat can be regulated separately without regard to Moisture and Ventilation, but the two latter are interdependent and must be considered together. It is proper to assert that eggs require a certain degree of heat and this statement will apply in every situation. It is not, however, proper to say that a stated degree of moisture will apply to all incubators as it is first necessary to know the rapidity of ventilation. These two must work together.

In the "Mandy Lee" incubator each and every feature is capable of full regulation and under complete and separate control. *Uniform heat and ventilation work together in building up the chick but combine with moisture in tearing down the shell.* These are opposing forces and it is upon the nicety of adjustment that success depends. Regulation of moisture and ventilation is as simple and easy as regulation of heat with incubators that are built right and with reliable instruments for measurement as in the "Mandy Lee."

A Boys' Poultry Club.

Allow me to say a few words, to give the boys who breed thoroughbred poultry, regarding the Boys' National Poultry Club. To begin with, there is much to be gained through any organization of this sort. You learn how to properly conduct yourself before the public, just what to say and when and where to say it; also, you gain a broad acquaintance. You can improve your ability to seccessfully manage an association or a large business firm. It really educates a boy to be connected with some large culb.

Our young secretary, Robt. G. Fields, has organized this great club without the assistance of older heads; and if there are any boys' poultry clubs in America that surpass the B. N. P. C., we have yet to hear of them. We have within the neighborhood of 200 members now, representing nearly every state in the Union. We would like to have it understood that not one of them joined merely because they were asked, but seeing the benefits of such an organization, they were quick to grasp them. And will add that they are all wide-awake, hustling boys and that Uncle Sam is proud of them as his younger generation. The advantages of membership in this club, besides those already mentioned, are, (1) your name, address and breed of fowls are printed in our booklet, which is published every January; (2) in this way you soon become acquainted with your fellow members; (3) you also are advertising your line of stock; (4) as said above, you get the benefits of the organization itself; (5) you are given many good hints on poultry raising. By joining now you will gain two good advantages, namely, (1) your dues are good until 1910, and (2) your name will be listed in our 1909 catalogue. We charge very small fees, only 25c per annum. If there are any adults who raise poultry and who have a boy between the ages of ten and twenty-one, you may join the Club in his name, thus advertising your stock and helping the Club, and giving your boy a chance to get out into the world of business.

Now boys open your eyes and "swing onto a good thing when you see it," Sent me your name, address and the variety of fowls you raise, with the small amount of dues (25c), and you will be given full membership at once. Address your letters to Henry N. Snell, 529 Church Street, Nashville, Tenn.

Cool mornings feed hot mash.

Breed from your very best birds.

Scald the drinking vessels often.

Too fat hens will lay soft-shelled eggs.

Over-feeding is as bad as under-feeding.

Perches are easily cleaned when made movable.

Don't keep the chicks too long on one piece of ground.

Force the hens to scratch if they don't do it naturally.

The hens lay more eggs when separated from the cock.

American Cornish Club Club Announcement.

Owing to the pressure of business incident to moving to Los Angeles, Cal., Mr. F. H. Williams found it necessary to resign his position as secretary-treasurer of the American Cornish Club. Our executive committee has appointed me to complete his unexpired term. In accepting this honorable position I do so with the full determination to do all I possibly can in the interest of our club. I want the earnest co-operation of every lover of all varieties of Cornish fowl. Our club is in a prosperous condition. Its success in a very great measure is due to that hustler, gentleman and thorough fancier, F. H. Williams. Those who have not paid their yearly dues please do so at once, so that I may be able, at our annual meeting, to report all dues paid. We want all Cornish fanciers to join our club. The cost is only $1.00 per year. You need our help and we need yours We have 1,200 copies of our 1908 catalogue. It is full of information for Cornish fanciers and contains ads of American and English breeders. It is conceded by the poultry press to be the best and handsomest catalogue ever issued by a specialty club and will be mailed to any non-member for five cents in stamps. Our annual meeting and election will be held with the National Fanciers and Breeders Association in the Coliseum at Chicago, Dec. 16, 1908. We want all members to meet with us. Cash specials and silver cup offered in competition to all club members. H. C. Hayes, Secretary-Treasurer, Eureka, Ill.

Signs of Ailing.

When a bird is found by itself, and not moving briskly about, you may be sure something is wrong. It may only be a simple cold. But there is something wrong. If its feathers are very loose, standing up as it were, the bird is distinctively ill, and should be examined. If the head pales considerably, the bird has cold if not roup. If you can squeeze mucous of an evil smelling nature out of its nostrils, the bird has roup.

If on opening its mouth there are dots or patches of white, or a dull cankerous yellow under the tongue or at the sides along the mandibles, or round the throat, the bird has diphtheritic roup. If again it has warts and sores on its head and parts of body, it has the most virulent type of the latter.

Swollen faces are indicative of common roup. The nostrils are plugged with hard matter, and the swelling is the result, because the usual channels of breathing, etc., are blocked.

If the bird have a blackened comb, a yellow face, a steady pushing forward kind of gait, it is afflicted with liver disease.

If again it won't eat, and seems not to have got rid of its last meal or two, but has a mass in the crop, more or less firm to the touch, or like big grains, and the bird mopes about, it is crop-bound.

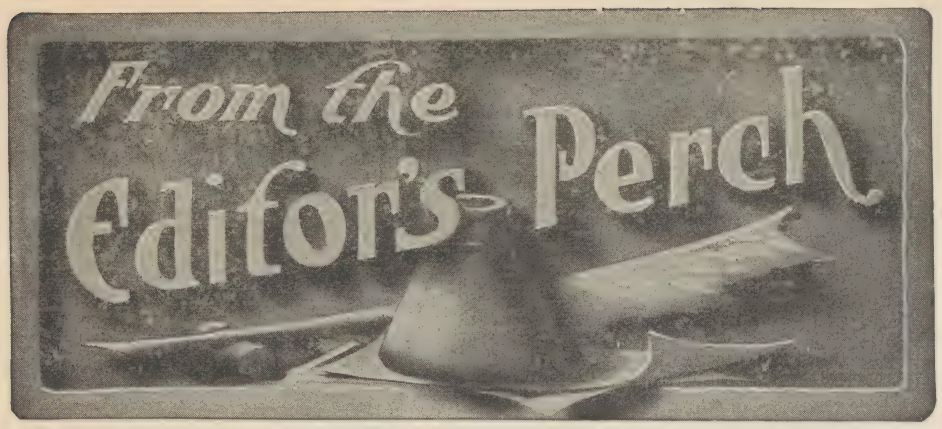
If again it mopes, and occasionally strains, as if trying to lay, it is egg-bound.

If the feathers are much messed at the vent, and the evacuations very loose, the bird has diarrhoea.

If the comb is scabbed, or has white scurf on, the bird comb disease.

If the legs are covered with a growth, like the outside appearance of the Shilton cheese, the bird has scaly legs.

If the bird has fits, it suffers from vertigo.



These are some of the most common signs of disease, but if remedial application is made in time, most of them can, with a vigorous fowl, be successfully combatted.

* * *

Use hot whitewash on the houses in preference to cold.

Build the henhouses while the ground is warm and dry.

Lay in a supply of dust for the chickens next winter.

The American News Co. have charge of retailing the paper over the news stands throughout the United States.

Published by

LEONARD W. LOTT & CO., :: :: 39 CHURCH STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879.

Yes, Mr. Pigeon Fancier, we will give you the same recognition as the poultryman, and we want you to feel right at home in the AMERICAN FANCIER. It is our intention to give you one of the best Pigeon mediums published. We wish to assure you the AMERICAN FANCIER is a Fancier paper, and covers every thing that the word "Fancier" applies to. Give us your support in this matter, and we assure you, we will do our best.

* * *

While it is the custom of some journals in reporting poultry shows to publish the winnings of their advertisers only, we wish to assure all our readers, that the AMERICAN FANCIER will not be so narrow minded and stand for a policy of this kind, which every true fancier in the country condemns. And so long as the AMERICAN FANCIER is under the present management, we will publish the awards in full or not at all. Our policy of fair play and justice to all shall be carried out to the letter. And we know that every true fancier wants to know who wins and who loses at the different shows.

* * *

We want every reader of the AMERICAN FANCIER to help us double our circulation. Just reflect a minute and see how easily this can be done, if you will but give us a few minutes of your time. Show the present issue to your friends and neighbors, and tell them for the small sum of fifty cents we will send them the AMERICAN FANCIER (24 issues) one year. It will give you all the news of the poultry world, full and complete show reports, and articles by the best authorities on poultry, pigeons and pet stock in America.

* * *

No better proof of the growth of the fancy poultry business can be found, than the hundreds of successful poultry shows now being held throughout the country, and it is only a question of time until every city and town will have a winter show. The entries at the shows already held in many places are in excess of former years which is sufficient proof that a financial panic and business depression throughout the country cannot prevent the onward march of the great poultry industry Let the good work go on.

During the coming season the thousands of readers of the AMERICAN FANCIER will spend many thousands of dollars for stock and eggs. It is strictly up to the breeder to decide whether or not he desires a portion of it, and if you do, then you must let the buyer know just what you have to sell and this information can be conveyed to him by an ad. in the AMERICAN FANCIER. It has stood the test for years, and many say it is the best advertising medium in the country. Start your ad. early; do not wait until the season is on. Now is the time, where the buyer is looking over the ads., and choosing the man with whom he intends placing an order.

* * *

The poultry show held in connection with the Genesee County (N. Y.) Fair was composed of over 700 birds, and as an early Fall show was about up to the usual quality. Barred Rocks were good. The first cock and hen were a well marked pair and won in a walk. Buff Rocks were small in number but made up in quality what they lacked in number. White Rocks were very good for the time of the season, and the same would hold good all throughout the show. But I could not pass by and not mention the first Rose Comb Rhode Island pullet. She was a hard bird to beat; of a good shade of red, and even and red to the skin, and free from smut in under color; good shape and will be a crackerjack when fully matured. The Bantams were a show in themselves. Exhibition Games were a good class. Pigeons were a good class, though small in numbers. Turkeys were represented by only one Tom and one hen White Holland and they were a grand pair of birds. One Tom and one hen Narragansett were a good pair of good size, but they had been on the road for some time and did not show up as they should. Ducks were small in numbers, but of good quality. Pekins, White Crested, White Muscovy, Colored Muscovy, Ruens and Blacks were represented. Geese were represented by one pair of a kind: Brown China, Toulouse, Embden and Brown African. The birds did not show up the way they would later in the season, but take it all in all it made a good show and was viewed by a large crowd on all four days.

Pennsylvania Branch A. P. A.'s President Answers First "Knock"

The American Stock Keeper noting the formation of the Pennsylvania Branch of the A. P. A. says: "About 60 attended, and we are told that matters went through in a rather cut and dried order; some of those who have done the most work not being recognized." While the Poultry Department of the Stock Keeper is edited by Mr. Drevenstedt, he was not at the Allentown Fair. So we do not mean him. Mr. Atherton, the editor, was, and being one of the judges, it is presumed by me that we mean Mr. Atherton, and he is the one who was told that matters went through in a rather cut and dried order.

Being employed as a judge at the Allentown Fair would not influence Mr. Atherton to state something in his paper that was not true. When something that is not true is stated in his paper, I presume he desires to be so informed and to correct it. The person who told Mr. Atherton that matters went through in rather a cut and dried order lied, and if Mr. Atherton will furnish me with the name of the man who made the assertion, I will make it my business to find out what manner of man he is and let the public know.

The truth is that some 60 persons were present when the Pennsylvania Branch of the A. P. A. was called to order by the temporary officer who had been elected at Niagara Falls. The number of members of the A. P. A. residing in the State of Pennsylvania and thereby entitled to membership in the Pennsylvania State Branch and having a right to take part in this meeting was just 15 af follows: Charles T. Cornman, Howard L. Davis, Wayne B. Eisenhart, J. S. Haupt, J. D. Koons, J. W. Morrow, W. H. Moorer, R. D. Reitzer, G. W. Swartz, Geo. W. Tracy, E. A. Weimer, W. Theodore Wittman, J. Harry Wolseiffer, W. L. Fulmer, F. W. DeLancey.

When nominations for President were asked for there was no response from any of the 15 members present for five or ten minutes. When Mr. Moore nominated your humble servant, no other nominations being made, the vote was cast for me by the Secretary. Does that look anything like a cut and dried proceeding?

Nominations were then asked for Vice-President and Mr. W. Theodore Wittman and W. P. Craig were nominated; Mr. Wittman withdrew leaving the election of Mr. Craig unanimous. For Secretary, F. W. DeLancey and W. L. Fulmer were nominated and after considerable discussion the name of Mr. Fulmer was withdrawn and Mr. DeLancey was elected. Mr. J. D. Koons was then nominated for Treasurer and none other being nominated he was unanimously elected.

Six directors were then nominated and elected—the number required. While there were only 15 present, 10 were elected to offices, 14 were nominated and four withdrew. Does anybody see anything cut and dried about this?

I did not seek the office to which I have been elected, I am not the one who seeks the position for advertisement, but know that to fill a position of the kind requires work without renumeration. But feeling that the building up of this great National Poultry Association through its State Branches is working for the betterment of the Poultry Industry, and to eliminate from the show room those who have disgraced the fraternity; I thought by filling this position I might help to persuade honest fanciers to join it in Pennsylvania, I might help in persuading every Poultry Association to join and hold their shows under the rules and regulations of the A. P. A. Under these rules and regulations we may get rid of any man who would paint the under color of a bird, any man who would pull a stub or feather, or carve a comb, or dye a feather or a leg; or show a well matured pullet for a hen; or borrow or lend a bird to show; or buy or sell a bird ownership to change hands only in case of winning; or would stoop so low to do anything else to take from his fellow fancier that which does not belong to him; to steal a prize from another that he might falsely advertise that he had bred a good bird, which, if the truth were known was either not his, or had been faked. And, also to fool the great public and persuade them to buy eggs laid by birds or stock from birds that were presumably fit for a first prize, yet fit only for the pot.

The above are the things that I have been fighting against ever since I have been a poultryman—the things which I have never had to stoop to do to win the prizes that I have won. And if by serving as President of this State Branch of the A. P. A. during the coming year I can do anything to eliminate this practice from the show room and drive out of the A. P. A. any man who would stoop so low as to do these things and to prevent from coming into the Association any such man; believing that honest principles will bring into the A. P. A. many more that it will keep out and thereby increase its membership and its usefulness, I shall consider myself well paid for what labor I may have to do in the next 365 days.

And to start the house cleaning, again, I ask that Mr. Atherton send me the name of the man who dares to lie about the proceedings of the Pennsylvania Branch at its first meeting, and I will guarantee to show what kind of a man he is.

H. L. DAVIS.
Pres. Pennsylvania Branch A. P. A.

Oriental Frill Club.

Several pigeon show premium lists have been received in the past two or three weeks. Paterson, McKeesport, Reading and Woonsocket hold exhibitions during the week ending December 12th.

Entries close for some of the principal shows as follows: Chicago, Dec. 7th; New York, Dec. 14th; Baltimore, Dec. 21st; Boston, Dec. 26th.

I am sorry to see McKeesport holding a six day show for I think it is generally believed five days is most too long, while four is much better. They also coop in pairs which is much objected to by fanciers. They have several specials on Orientals.

Chicago offers a cup on Orientals, but the Western Frill Club, which meets there offers nothing on this variety. Apparently the western oriental men have not supported the club. We have one man from the west and trust others will follow. Our specials all go for Orientals and are not split up among two or three varieties. We now have twenty-seven members and still have room for more.

I am sorry to see the Baltimore show come between New York and Boston for it will hurt all three shows. I understand they will have several Oriental specials.

A. A. ASHLEY, *Sec.*

Notes

Give bunny plenty of fresh air.

See that bunny has sunshine so he can take a sun bath these cold days.

Do not fail to fill your cellar with beets or some green feed for bunny.

The English Turbit.

Too much cannot be said of the English Turbit, the aristocrat of the pigeon family, which has always kept a strong hold on the fancier who has an eye for the beautiful, for surely no other variety possesses so much real beauty as is combined in a thoroughbred Turbit. Their beautiful wing color, their large, appealing eyes and haughty carriage are a delight to all lovers of birds and as a foundling the Turbit has no equal among birds for they are docile by nature, can be picked up anywhere in the loft if gently treated, and like to trass and strut and be played with, and I have had birds so tame that they would light on me and follow me around the loft eating from my hand.

You may ask: "What are they good for?" and if you do not like pets I will answer that they are good for nothing. If you do like animal life about you then my answer is different, for pity the man who does not like pets of some kind.

A neat little loft of Turbits is just the thing for the man who needs a daily change from the humdrum, nerve-racking, tissue-robbing, work-a-day life. They will get you out of bed a little earlier to give them a little attention and you will fuss with them noon and evening, which is just what you need to drive dull care away.

If you have never kept pigeons I'd advise you to try it, but do not start with a good pair of Turbits. Get a cheap pair, for it will take you a season to learn even the A B C of Turbit breeding, and I'd hate to see a good pair used for the trial and you lose them and your money.

The essentials are a dry place to keep them, plenty of fresh air and fresh water, no draughts, good, clean food and grit and care as to lice and rats. Keep them hungry and active.

No variety of pigeons command higher prices than a good, thoroughbred Turbit, and winners at large shows have sold for from $200 to $300 each, and a pair of breeders that will not command $25 are likely to be ordinary birds.

Learn first to fancy the Turbit, then learn to care for them successfully and raise the young, then buy one or two good pair in preference to ten ordinary pair, and with intelligent mating you will have good results and be successful.

The accompanying cuts of some of some of my birds and a cut of an English hen will give you some idea of their beauty and you may conclude for yourself whether you like the English or home-grown the best. England has years of advantage over us in breeding this handsome bird, but many a good one has been brought here, and many good birds are raised in this country today, but Turbits are not as generally raised here as in England for some reason or other, and the breeders of strictly high class, blue blood Turbits in this country today can be counted on your fingers.

The fancier who will take up the Turbit and hold to his oars until he reaches the headwaters of Turbit possibilities will have a name, for men like Kline, Lenhart, Ullrich, Orr, Parson Feather, Hart, McIntyre and others will pass down in the history of the American advancement of this, my favorite bird.

RAY S. BROWN,
Allentown, Pa.

PET STOCK DEPT.

Edited by L. G. PLATH, York, Pa.

Housing and Feeding Cavy

To make a house for cavy, one does not have to buy the very best lumber, but can get store boxes of one inch boards. I made mine—the floor two and one-half feet square, the front is two and one-half feet high, the back two feet high, the front has a window in the centre, sixteen inches by sixteen inches at the lower right hand corner is an opening, five inches square for the cavies to go in and out. I have a slide fixed to cover hole at night. The roof extends about six inches over the sides, front and back of box. I have the roof hinged on the box, so I can raise it to feed and clean out. I have a run in front of the box,same width as box, six feet long, made of one inch wire netting, it is tacked on frames and hinged or hooked together; run is eighteen inches high with a wire covering same as sides, and hinged to one side, or box to raise and clean out, the front of box faces the south. I feed the cavies grain in the morning three-fourths oats and one-fourth cracked corn, and also give them mash the same mornings. I give the rabbits mash (see article feeding the rabbit). I do not give my cavies any water. I give them plenty of green feed instead of water and my pigs breed good and grow good. I give them hay every evening, but I have plenty of hay in the box all the time when it is very cold I fill the box full of hay.

Notes

Scrub bunny's water and grain dishes now and then.

Do not give bunny mouldy hay or grain.

Do not forget to send some bunnies to our annual show at New York.

See that the roof over bunny does not leak.

We desire to call the attention of our subscribers who are in need of printed matter to our modern facilites for doing all kinds of job printing. We have a large display of type for this class of work, and our machinery is of the most improved order. Our prices are very low, much lower than can be gotten elsewhere for the same class of work. All work done by us is guaranteed to give perfect satisfaction or money will be refunded. We will be pleased to estimate on any printing that you may want, and will give you reasonable figures on same. Let us hear from you, and we will, no doubt, be able to help you get up some attractive printing and engraving that will bring you customers when nothing else will. A trial order will convince you of the merits of our work.

HOMERS FOR SQUAB RAISING

We sell only selected birds, actually mated and matings GUARANTEED. Each bird is banded, and list and description of every pair given to purchaser.

And we have young and grown stock for sale, and trained stock. Send 10 cents for 40-page descriptive catalogue. Brown Beagle Kennels, York, Pa.

CONTINUOUS ADVERTISING

A yearly ad. is better than just inserting one now and then for it keeps the name always before the public and one cannot tell just when the readers of a magazine will reply.

Many of our advertisers have received from a single order enough profits to more than triple the cost of the entire year's advertising.

One of our classified advertisers reports that he has sold almost a thousand dollars worth of birds from his classified ad. Many others have sold from $200 to $900 worth.

If your proposition is right, a classified ad. in these columns simply can't help but bring you good return.

It has proved a profitable investment to many and we have hundreds of unsolicited testimonial letters, copies of which we would be pleased to furnish you upon application.

Leonard W. Lott & Co. conducted at an enormous expense, three extensive subscription campaigns which brought to the AMERICAN FANCIER a quantity of quality circulation, which has brought returns to our advertisers that are really phenomenal.

We are working hard on another subscription campaign which will bring a great increase to the present circulation.

Better get your ad. in the next issue.

real high quality. Price in one lot, $50. For particulars write
CHARLES R. CROWE,
Guelph, Ont., Canada.

FEED
TEN CENTS PER BUSHEL

PATENT PENDING

Is your main feed for growing chicks and making eggs costing you more than 10 to 15 cents per bushel? Have you raised 95 per cent of all chicks hatched this season? Can you care for 2000 layers and raise 3000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how I do it. My new book, **"Profits in Poultry Keeping Solved,"** will tell you how to do it, as well as save you $25 on every 100 chicks you grow to maturity. My third edition of 5000 copies now ready. 3000 Single Comb White Leghorns and White Wyandotte chicks growing under my new system for the fall trade. :: :: :: ::

Winter Egg Production

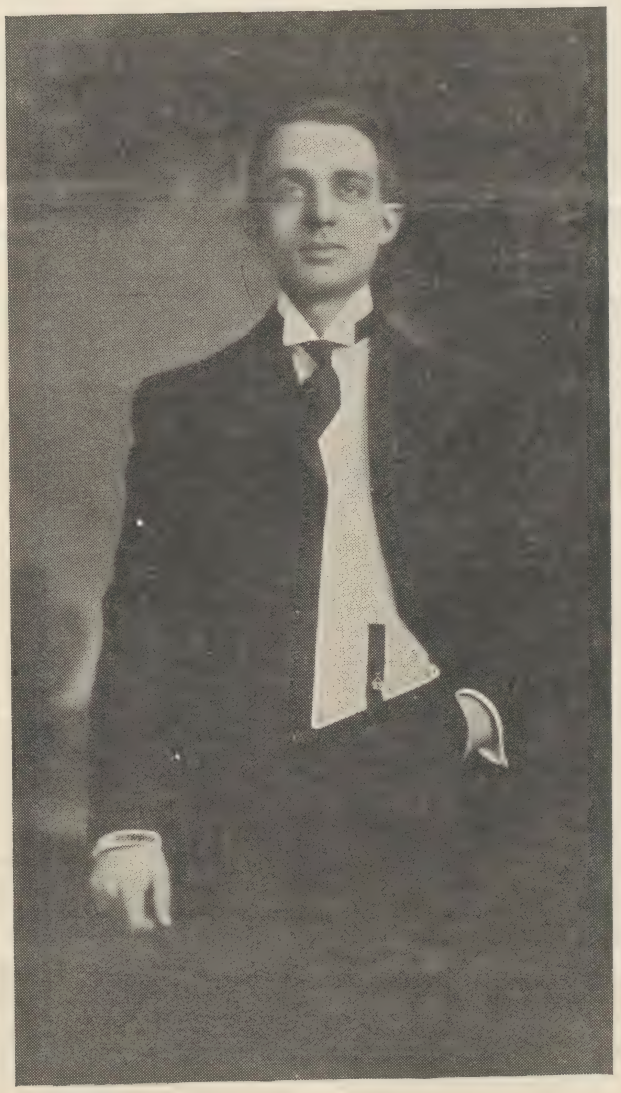
Written Expressly for the American Fancier

A large per cent. of the poultry that is usually held over the winter is primarily kept for egg production.

And, as winter is the season in which eggs sell at high prices it is naturally hoped and desired that this poultry may lay well during these months. But how much of it does? Such a large per centage does not, that too many people a tale of anything like a heavy winter production of eggs reads for them like a fairy tale.

There are many reasons for a low egg crop in the winter months and perhaps half of these reasons are entirely outside of proper winter treatment or care. And very, very strong reasons these are too. In fact if these reasons have been partly or wholly neglected no amount of proper winter treatment will fill the winter egg basket. Some of these reasons are, and I should like to elaborate on them here; stock not properly bred for heavy egg production; debilitated or run out stock; stock raised in confinement; stock that has not, in a word, been born right or raised right.

Sorry, indeed, am I for the fellow who is facing the winter with wrong stock to start with and who expects to make a profit or a living out of the eggs he is to get. Just a little applied common sense and there would not be near as many failures or people quitting the poultry business after a few years.



Taking it for granted that the stock is nicely matured, and is uniform in size, healthy, vigor and development and that they have been moved into winter quarters by now, the first thing I should be careful of is, that they would not run out in the cold rains prevalent at this season. I would not for a minute shut off the fresh air, but I would shut them under cover and I would be to especial pains to see that they had plenty of emplovment such days.

A laying hen is always a busy hen and here is a strong pointer as to our treatment of winter layers: A foot of straw or any nice litter like leaves or hay-chaff, or corn-stalks, cut into six to nine inch lengths, should be provided and all grain fed therein.

Rye straw or the cut corn-stalks make the best scratching litter and I strongly and emphatically favor a board floor. A board floor means a clean floor and a clean litter, means dry litter as against dirty, dusty and musty litter, means a drier house and a cleaner house. Means decidedly less chance for any colds or "snotty" noses.

With a wide open house, clean and dry, you will practically never have a single bird showing signs of a cold swelled eyes or roup; provided the same conditions, plus dust and you will have some cases regularly every season.

Now on the days of the cold fall rains, scatter an extra portion of millet in the litter, hang up a few cabages or even some bones with a little meat and grizzle attached. Probably too, on account of the weather you have no other work you can do. Then spend these days in getting acquainted with your layers. I know of nothing that will pay you better than doing this very thing.

C. L. PENSYL, Bloomsburg.

Feeding all grain in litter wants to be mixed with brains. You don't want to feed too little and you don't want to feed too much. One man only should do the feeding and he can gauge the amount only by observing the actions of the birds themselves at feeding time; how they are laying and the number they are laying, and finally as a supreme test, by carefully opening up the litter and observing how much of the feed of the day before remains.

I would feed all shell, grit and charcoal also in the litter.

A laying hen will eat a great deal more than of the two former when she finds them lit by lit while searching for food. And this, much to the owners profit. I even ilke to feed the beef scraps in the litter. This can be done without waste or loss by putting some through a screen, feeding the finer particles in the mash and the coarser in the litter.

Buy only a good or the very best grade of beef scraps. Green cut bone is good if sweet and fed as it should be, a very small amount every day.

Mash I would feed once daily. All they will eat up clean inside ten or fifteen minutes. I would mix with boiling water only, and I would feed it fairly moist, not wet or sloppy, but still so moist that the hens can eat it with a relish and look for more.

Dry mash and hopper feeding are much in style, but for plenty of winter eggs or for forced winter egg production they are not in it with grain that can be scratched for and a wet mash that is relished and greedily eaten.

Laying hens need a lot of water and they won't or can't drink a lot of ice water. Therefore, water with the chill off should be provided. Not hot water, and not hot mash, not by any means. But in extreme cold weather the water needs to be changed as often as in extreme hot weather or say three times daily. And the water should be clean and be handy for the hens.

I could never definitely determine whether the presence of males helped or retarded egg production. With Leghorns I am inclined to believe there are more eggs with a limited number of males. Likewise I believe that nest eggs in every nest help the egg yield. Likewise the dust bath. In fact anything that trends to keep the hens happy and contented and deceived as to the season makes for more eggs.

Variety in the food has the same tendency and if there is any use at all for poultry powders and so-called egg foods and for such things as cayenne pepper, ginger, etc. in keeping hens, then it is in stimulating winter egg production. These certainly help out as against similar things a hen picks up on the range in spring and summer.

The proper time to feed the mash **is at a regular hour.** In mid-winter I would feed in mid-afternoon and on very cold days I would feed, just before dark, all the whole parched corn they would eat. If they get no other whole corn, and they should not, they will usually eat well of this.

And here's the object of it all: Have your hens go on the roost every night with a crop packed full. While I was feeding Leghorns for eggs exclusively I would go along the roosts nightly feeling the crops. And the full crops were the index to the eggs I was getting. In fact I found that those hens whose crops, week after week at roosting time, were only partly full were always the poor or non-laying hens and I found that this matter of a full crop was as safe a way as any to pick the layers.

THE PATERSON SHOW

The Paterson Poultry, Pigeon and Pet Stock Association has always held a successful show, so therefore their last one was a duplicate of its predecessors in this way, but surpassed all others in the number of exhibitors and visitors. The officers of the association deserve great credit for holding so excellent a show, but with Mr. O. H. Quentin as Secretary, success was assured long before opening day. The awards were placed by Messrs. Drevenstedt, Seaman, Frotterall, Cook and Stanton.

Complete list of awards.

POULTRY CLASSES

Light Brahma.
Cocks, first prize, Holden Rigby; second and third, Charles J. Frost; fourth, Joseph Greenwood; fifth, O. H. Quentin.

Light Brahma.
Hens, first and second prize, Joseph Greenwood; third, Charles J. Frost; fourth and fifth, Joseph Greenwood.

Light Brahma.
Cockerels, first prize, Joseph Greenwood; second, Charles J. Frost; third, John Ploch; fourth, O. H. Quentin; fifth, Charles J. Frost.

Light Brahma.
Pullets, first prize, Charles J. Frost; second, O. H. Quentin; third, Charles J. Frost; fourth, Joseph Greenwood; fifth, O. H. Quentin.

Buff Cochin.
Cockerels, first prize, Mrs. Henry Barlow.

Black Langshan.
Cocks, first prize, A. A. Winkler; second, John Whitby.

Black Langshan.
Hens, first prize, A. A. Winkler; second, John Whitby; third John Decker.

Black Langshan.
Cockerel, first prize, Alfred H. Blashke; second, John Whitby; third, A. A. Winkler.

Black Langshan.
Pullets, first prize, John Whitby; second, A. A. Winkler.

Barred Plymouth Rocks.
Cocks, first prize, Edward Miller; second, Harold J. Bogert; third John Swayck; fourth, Franklin W. Muir; fifth, W. W. Rapeyle.

Birchen Game Bantam.
First prize, Charles Kahle.

Ring Neck Pheasant.
First prize, Wendover farm; second, John Schultz.

An old English authority says, "All hens that are inclined to set should be allowed to hatch and bring up one brood of chickens a year; for, if altogether restrained from sitting a hen suffers much in moulting, and is restless and excited for the remainder of the season." If this is so the nonincubating breeds must have a time of it in moulting. Perhaps, just only perhaps, this is the reason for the fall starving of birds to induce rapid or early moulting.

BUFFALO, NEW YORK.

The second annual show of the Buffalo Poultry, Pigeon and Pet Stock Association will be held at Convention Hall, Buffalo, N. Y., February 1st to 6th, 1909. The Association has been fortunate in securing the services of Mr. George H. Burgott as superintendent of poultry. Mr. Burgott needs no introduction to the poultry breeders, naving been superintendent of poultry at the Pan-American Exposition and judge at Madison Square Garden for the past twelve years. The pigeon superintendent is Mr. Charles E. Lang, the well known pigeon judge. The judges for the coming show so far secured are well known to the breeders of poultry and pigeons and are men of wide experience. The judges for poultry are Messrs. Schwab, Butterfield, Brace, Webb, Williams, Dr. Andruss and Dr. Kyle; the judges for pigeons are Messrs. Ewald, Kirkover and Smith, and J. Thomas Harp for pet stock.

The management of the Buffalo show intends to make their coming exhibition one of the finest and best ever held in this part of the country. Numerous gold specials and silver cups have been secured, including $100 in gold from the Chamber of Commerce of Buffalo. The cooping of the show will be done by the Empire Cooping Company, and all birds will be cooped singly.

For further particulars and premium list, address Howard J. Young, corresponding secretary, 623 Elm street, Buffalo, N. Y.

League of Pennsylvania Poultry Shows.

There is a movement on foot to bring about before the next show season a consolidation of poultry shows within the state of Pennsylvania under the above name.

The objects are to form a circuit, thus avoiding any clashing of dates. To purchase a thousand or more up-to-date coops, for use by the shows on the circuit at a nominal rental, and various other things to be gained by a union of forces.

A meeting will be called early next spring or summer. Date and place to be announced later.

The American Columbian Plymouth Rock Club.

The American Columbian Plymouth Rock Club will offer for competition by members only, handsome club ribbons at New York, Boston, Chicago, Philadelphia and other of our leading winter shows, and we trust that members will reciprocate by bringing out their best birds in an effort to capture these ribbons.

In addition to the above, Mr. D. M. Green, president of our club, offers for competition at the coming Madison Square Garden Show, December 29th, 1908, this being the place of the annual meeting of the club, a President's Sweepstake Special for the best cock, hen, cockerel, pullet and pen to be exhibited by a member of the club. Mr. Green is doing splendid work in the interest of Columbian Plymouth Rocks and the A. C. P. R. C. is extremely fortunate in having him at its head. Members can best show their appreciation of this Sweepstake Special by making as large an entry as possible at this show. E. B. Andrews, secretary, 9 West 17th street, New York.

Black Breasted Red Game Bantams.

In the American Fancier of November 15th, 1908 is an article on Black Breasted Game Bantams, in which a cut of a pair is given. In looking at the cut which we are told is the correct thing we can't help being reminded of a pair of spiders on stilts. I had supposed that the proper thing to do was to have them breed true to color and as small as possible. That has been my endeavor but if now to be in style I must get them up on long legs I confess I don't know how to do it. I set a hen on ten eggs and she hatched nine chicks. I keep them up-stairs in the barn. Twice I let them run out during the day, but each time a cat picked one up. Since then I keep them continually up-stairs and they are doing nicely. I expect to have two cockerels which will weigh, when full grown, about two pounds each. but they will not stand elevated unless I get hold of their legs and stretch them in some way. It never seemed to me as though a little body stuck on stilts looked well or was an object of beauty and a joy forever, but my neighbor, Mr. Lester Hodge, a good sensible man and one of the solid and substantial citizens of Cobleskill, and who breeds most all varities of poultry very successfully tells me thta the elevated bantam is the thing and tnat if I want to be in it I must follow the fashion. It must be so, but good Lord have mercy on us for what we are coming to.

I cannot help but be reminded of Pat, the Irishman, wno killed a fowl and invited his friend Mike and his family to dinner. When serving the fowl Pat asked Mike's wife what part of the fowl she would have and she answered," A leg if you please." The little boy when asked what part of the fowl he would prefer also said he would take a leg. Then said Pat, "Now Mike, me boy what part of the fowl will you have. And being so accustomed to say just what his wife did, blurted out that he would take a leg. "Holy Moses," cried Pat, "what do you suppose I am carving a spider?" Well spiders may be good if you have enough of them.

Miller.

Wolmton, Pa. Poultry Show. Nov. 25th to 28th, 1908

Wolmton, Pa., is a place of only several thousand inhabitants, but that it is on the poultry map to stay is evidenced by the fact that they have held four consecutive poultry shows each one better than its predecessor.

They have made some money too, at each exhibition, and have just as regularly put back into the show itself what money was made the year previous, into coops, specials, etc.

Wolmton is near Reading, Pa., easily accessible by trolley.

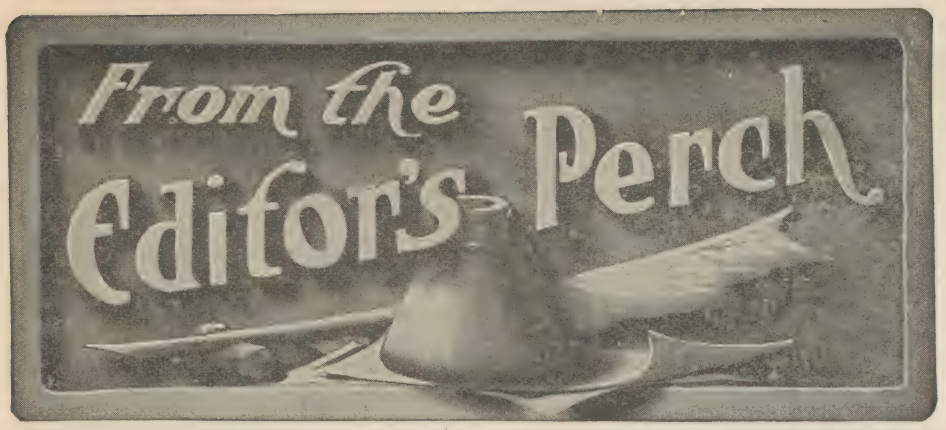
They have annually chosen Thanksgiving week for their event and this has become so much of a fixture that they are always sure of a big crowd and a good gate on these days. Although they had a good attendance all week this year. Wolmton show officers are of the right sort, workers, and anxious to please. This is only a four day show and the writer verily believes that this is one of the prime reasons this show has been making good. A week's show is too long. Too long for the officers of an association, too long for the birds, the exhibitors and the public.

Asiatics were the usual small classes of these days whether the show be big or little. There was a good light brahma or two and very nice lot of partridge cochins, good in cochin character and with an exceedingly well colored bird or two. With a warm class of black langshans in most superb physical condition. Barred Rocks were full classes with birds in the money of high grade, notably 1st cockerel and 1st pullet. In buff rocks there were two exceptional good cocks and some nice youngsters in both sexes. 4th and shape special pullet especially strong in type, but lacking in depth of color.

White rocks were also strong in old male classes. In fact the four cocks shown were an attractive show by themselves.

White wyandottes included a cock of exceptional merit, in fact all the winners here were of good quality.

Outside of the whites, partridges showed the most quality. Partridges were indeed fine here, **particularly in males.**



Rhode Island Reds brought out the banner classes. Some eighteen pullets in the single combs. I liked 1st old and young males, both being good in color and type. 1st pullet was practically a solid red bird and a good one at that.

Orphingtons rather small classes.

Black minorcas, single and rose comb some fine birds, notably the males.

Same in single comb white and buff leghorns, brown leghorns, particularly rose combs not as good as they might be.

Cochin Bantams were strong and there were nice birds in all the colors. Rarely does one see so many or such good cochin bantams as were at this show.

CLASSIFIED ADVERTISING RATES

25 words or less, 1 time, 50 cents; 12 consecutive times (6 mos.), $5.00; 24 consecutive times (1 year), $8.00. Additional words 2 cents each per issue. Numbers and initials count as words. **Terms: Cash with order.** The wording of the ad. can be changed as often as you wish. Forms close on the 9th and 24th of each month.

The American News Co. have charge of retailing the paper over the news stands throughout the United States.

Published by

LEONARD W. LOTT & CO., :: :: 30 CHURCH STREET, NEW YORK

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3. 1879.

The winter show season now on in full swing, is ample proof of the rapid growth of the poultry business, and the rapid strides the breeders are making in bringing to a higher state of perfection the different varieties. But a few years ago poultry shows were not so plentiful, but today we find them in nearly every city, and town. With so many shows, the interest taken has had a tendency to arouse the entire community, and it has been a source of great education to the farmer. He can come and see the different breeds, and hear the merits of each discussed in an intelligent way. His thoughts drift back to his mongrels at home and he actually becomes ashamed, and generally places an order before leaving. The result is the mongrel is fast passing away; they have had their day, and it is only a matter of a short time, until the great American farmer realizes the profit to be made in poultry. He will be in the market for the heavy laying thoroughbred, the modern trapnested hen, and instead of hunting eggs in the hay mow, wagon shed, and under the corn crib, he will have a modern poultry house, equipped with the latest labor saving devices. Yes, the poultry shows have been educators, and the fancier who does not support them is not only missing business, but is losing the greatest of all opportunities to promote the best interests of the business.

* * *

With the present flourishing condition of the poultry business, there is a buyer for every bird that is for sale, and the problem is, "How can the man who has them for sale get in touch with the buyer. This can be done through the poultry press. As a well known breeder expressed it, a good ad in a good poultry journal is as safe as an investment in government bonds. Yes, the egg selling season is almost at hand, and during the next few months countless thousands of dollars will be spent for both stock and eggs. Are you going to get your share? Have you any stock for sale? Will you have any eggs? If so, place your ad in a poultry journal that will do you the most good. Judging from the letters we are receiving from all parts of the country we cannot help but say that an ad in the American Fancier will be a profitable investment. Give this all important matter your attention.

* * *

An interesting Letter From Madam Paderewska

was recently received by Mr. Lott, who had the honor of being entertained by Madam Paderewska when she was last in America.

Madam Paderewska is endeavoring to produce an entirely new variety suitable for the climate and conditions of Poland, her native country. If she is successful in originating such a breed the birds will be sent to Poland where they need eggs and chickens so much, as millions of Polish money go yearly abroad, spent on the very same products which Denmark—a country ten times smaller than Poland—bring millions to its inhabitants.

This new breed is called "Riond Bosson," named after her establishment on Lake Geneva, Morges, Switzerland. It has been obtained from the Golden Polish and the Silkies as a second cross. Their plumage is very original—downy like that of the Silkies—but the color instead of being white is a mixture of fawn, brown and black. They have the black heads, eyes and skin of the silkies, and feathered legs with five toes. They are much hardier than either the Silkies or the Polish and excellent layers and sitters.

In writing about the Switzerland work, Madame Paderewska informs Mr. Lott that the people have made great progress, and the three poultry socities which existed in Geneva have amalgamated. Also that there has been a new club started at Lausanne.

Great interest has been shown at the leading shows of the Continent where her poultry manager, Mr. Archer, has exhibited a new style brooder of his own invention. It is heated by a hot water tank warmed by a lamp placed in such a way that the harmful fumes cannot penetrate. The lamp can be regulated from the outside without opening the rearer.

Words of highest praise tell how well pleased Madam Paderewska is with the $7,500 pen of Crystal White Orpingtons which she purchased in America, but it is with deep regret that we learn that some of the other varieties secured while in this Country were not satisfactory; it is most disgraceful that her confidence has been imposed.

Madam Paderwska will re-visit America shortly after the New Year and we trust within time for some of our leading shows which we understand she will visit with Mr. Lott.

Cincinnati A. P. A. Show, Ohio Branch.

The Cincinnati Poultry and Pet Stock Company, incorporated under the laws of Ohio, Capital $5,000, will January 12-16, 1909 give its 11th annual show, and we have a record of always paying our premiums.

There have been no breaks in the ten shows we have given, one each year, this we consider quite a record.

This year the American Poultry Association, Ohio Branch, give their show here.

The show will be cooped with Empire coops, will have an Institute, at which men of national reputation will lecture .

Several clubs will meet with us, have a number of State cups offered and ribbons for all varieties.

Premiums $3.00 first, $2.00 second, $1.00 third, with special of $10.00 for every variety.

Judges: S. T. Campbell, Mansfield, Ohio; Geo. H. Burgott, Lawtons station, N. Y.; Loring Brown, Smyrna, Ga.; for poultry. F. C. Borcherdt, Jr., Manitowoc, Wis., for pigeons.

Julius Friedeborn, secretary, 139-141 W. Sixth street, Cincinnati, O.

We have a fine array of judges and with our past record of square dealing, good and prompt payment of premiums we should draw many entries.

Premium lists will be ready early in December and will be mailed promptly by applying to Julius Friedborn, secretary, 139-141 West 6th street, Cincinnati, Ohio.

Poultry Show, Augusta, Ga., Nov. 2nd to 7th, 1908.

At Augusta, Ga., November 2nd to 7th, under the management of the Augusta Poultry Association, closed the most successful show ever held in the South. Because of its endorsement by the A. P. A. A large number of fanciers were attracted than heretofore, and the entries, which numbered upward of a thousand displayed fine quality and represented every state in the southeast and many of them further north.

It was truly a fanciers show. Those having the show in charge, to a man, have the welfare of the exhibitors at heart and true Southern hospitality was handed out to the visiting fanciers in such lavish manner as no one else can. Too much cannot be said in their praise.

Judges were: T. Reid Parish, J. S. Jeffrey, C. W. Fowler and Geo. M. Hood. All the A. P. A. specials which they donate at their branch meetings were there, besides thirty-nine (39) silver loving cups and a generous supply of medals and ribbons by the Association, and its friends. The largest class in the show was black breasted red game bantams, bringing out **ninety-nine** "high steppers" with quality "to burn." Probably the largest show in this variety ever cooped on this side of the "pond" and surpassing the great Crystal Palace show of last year, by twenty odd. Dr. Cleckley, because of his official position as president of the Association, entered his string for exhibition only.

Dr. S. J. Fairbank, of Utica, N. Y., secretary and treasurer of the Ex. Game and Game Bantam Club, coming over a thousand miles proved a winner of the lion's share of honors. Mr. Carl F. Schwenker, of Red Bank, N. J., also annexed many regular and special prizes. Among those of the South successful were: Mr. W. R. Allard, of Atlanta, Ga., and Mr. John Low Smith of the same place. Mr. Jager of Florence, S. C., and Mr. L. W. Smith, of Charleston, S. C.

In cock-birds, (19) Blk. Reds first very reachy and bright in top color won cup for best bird in show all varieties competing, age, color, and sex, also won best male in show. Second in better condition and harder feathered, might have been first, third, fourth and fifth, not so reachy, all fit for Madison Square Garden.

Hens, (24) first grand type and station out of condition, won special for best female in entire show. Second better color and condition. Third, fourth and fifth all good.

Cockerels,(10) first, second, third, fourth and fifth, brothers also Ckl. heading 1st. Pen very similar in style and color, all might have been first. First a bit smaller and very bright, all having grand heads.

Pullets, (16) first grand type. Second, better color. Third, fourth and fifth, fit for any show.

Pen (6) first pullets full sisters and very much alike, like four peas in a pod, grand type. Second pullets, better in color, not so even, Ckl, brightest ever seen in the South. Third pullets, not so even, cock a bit heavy in bodv. Fourth, best hens in the lot, cock carries bad tail.

Red Pyle, Duck-wing, and Birchens small entries, quality fair.

Gibsonburg, Ohio, 12-11-08.

American Fanciers,
New York,

Gentlemen:

Under separate cover I am sending you one of the Toledo Fanciers Co. premium lists. We feel that we have offered one of the best strings of regular as well as special prizes in the United States and we are already assured of a nice large entry in many of the classes.

The American Ancona Club, The District Buff Plymouth Rock Club and the State White Wyandotte Club will meet with us . And not only the prizes in the premium list will be awarded, but a large supplementary list is being gotten together. We extend a hearty invitation to breeders within reach of Toledo to show with us and win all the cash and as many specials as they can.

Our judges: Tucker, Stanfield and Mulinix need no introduction. Mr. Mulinix will judge bantams and pigeons while Mr. Stanfield the orpingtons and other varieties, and Tucker the Mediterraneans especially.

We extend to the poultry press every courtesy possible. Present yourself to the Secretary and get a pass. We will give you free space if you want it or privil ge of the floor, if you cannot come or send a man send your sample copies and we will distribute them for you and in return all we ask is your good will and assistance as you have already granted.

Yours, very truly,
L. C. Taylor, Sec.-treas.

Every mid-west Fancier will be interested in the forthcoming Premium List of the fourteenth annual exhibition of the Western Poultry Fanciers Association to be held at Cedar Rapids, January 25 to 30, with Judges Russell and Tucker to place the awards. The show this year, as in the past, offers more liberal cash, special and sweepstake prizes, more state specialty cups, larger and better class of exhibits than any show in the state. Ample facilities, the best in the country, in express, hotel and best of all the most liberal treatment. If interested send for Premium List.

Pet Stock Dept.

Edited by L. G. PLATH, York, Pa.

The Peruvian cavy, the prettiest of the cavy family requires quite a little labor to get it to look pretty. When the Peruvian is out of condition it is not so very pretty. To keep the Peruvian that they look nice one cavy must be kept in a coop that is kept nice and clean, and must be combed or brushed once or twice a week.

When Peruvians are kept together in one coop, they will chew one another's coats off. If you were to look at some Peruvians that were kept together for breeding you would say they were only Abyssinians as their hair might all be chewed quite short, and again I had some together that did not chew one another's hair, but when they are kept together they rub against one another and their hair gets rubbed a great deal more than when separate, and the hair does not get so long. I had some Peruvians to clip themselves, just why they chew one another's hair off I cannot tell, whether from jealousy, I do not think so, but I think the long hair bothers them some times, and I believe they chew one another's hair because they do not know what else to do with themselves. There are times when the fancier must not get angry, that is when he or she has the cavy ready for show and cavy chews its hair off or cavy starts to moult and loses its hair, it requires patience and labor to get them ready for the show-room.

The Peruvian should be selected when about three months old, and put in a separate coop, and about three months before the show cavy should be combed and brushed twice a week till the show. When the hair gets so long that it drags it should be tied up, to keep it from wearing off. When the hair is tied up it must be opened and brushed out once or twice a week, if left to go longer than a week before opened it will get tangled.

I had some Peruvians to chew the hair off after I had it tied up, that showed that it annoyed them too much, or maybe they thought they would save me the trouble of opening it.

Some breeders even went to the trouble to rub their Peruvians with a hair tonic in order to get a good coat of hair on their Peruvians. I have never tried that and do not advise anyone to try it.

I feed my cavies good so they are nice and plump, and the cavies I intend to show I give a little piece of bread soaked in milk a few weeks before the show. A bath will improve the Peruvian's coat for the show-room. The white Peruvians must be kept clean as when their hair gets stained it cannot be washed out; the broken color Peruvians as a rule have a little longer hair than the white ones, although some white ones get as long hair as the broken colored ones.

In breeding Peruvians get the male and female as near standard as possible, or in other words breed from winners, but don't fall to the belief as I am sorry to say some would-be breeders told me that a winner cannot be bred from a winner. If you cannot breed a winner out of winners there is something wrong. I don't mean to say that you cannot breed a winner out of culls, but the blood must be there, if you breed winners out from culls, then these winners out of the culls will breed you culls, that in the end you do not gain. But breed from your best ones all the time and in that way you can expect to build up a good strain of cavies.

I find that the young in one litter take after the father and in another litter the young take after the mother, so I want both to have a good thick, long silky, coat of hair and good shape, and marked well, I prefer if my sows have only two pigs at a litter. I leave the pigs with the sow till they are one month old, then I separate the sex. I put the males in one coop and the females in another coop till three months old when I put each one in a separate coop.

I do not breed them till 8 months old, then I can tell which ones are the best.

I have plenty of saw-dust on the floor of my cavies' coop and on that I have timothy hay with the tops cut off. I find this the best I tried yet. Some breeders use a fake bottom in their coop, made of either one-fourth inch mash wire netting or a slatted bottom. I have tried both but do not like either. But you can try both and you might like them better than I do .

The lop-eared rabbit though not as popular as the Belgian hare, is a very pretty rabbit, its chief attraction is its ears which are very long, measuring from 18 to 28 inches from tip to tip, and from 4 to 7½ inches wide. I have had some people ask me if the lop could hear any better than any other rabbit on account of its large ears. But their large ears do not make their hearing any better than any other rabbit. The breeders main object in breeding the lops is to get length and width of ears, but in breeding for ears one must not lose sight of shape and color, although color does not make much difference only in keen competition in the show-room. In broken colors if there are two lops in a class that are about alike in shape and earage, but not alike in color, the evenest marked one, the one side marked the same as the other side, will win over the one with color blotched here, there and everywhere.

I am breeding the lops 17 years and am not tired of them. I would sooner breed the lops than any other variety and if I ilve 17 years more and am able I will still breed the lops as they have been very interesting to me. I started with a pair, the buck weighed 11 pounds and had an earage of 23½ inches and the doe weighed 14 pounds and had an earage of 23 inches. Out of the first litter I raised of them I got only one to come up to the parents in size and the second litter went back in size and earage, and then I got strange blood to mine and could not reach the 2 foot mark, and have not reached it in all my raising.

Now this September, 1908, I imported some lops from Germany—a buck with 26 inch earage and a doe with 25 inch earage and next fall I will tell you if I reach the mark and raise some young with 26 inch earage.

I have been trying for the last 3 years to breed the pure white lop, but have not been able to do so yet. I came to the conclusion I would give it up, but I will try it this year again. One breeder in Germany worked 15 years before he produced the white lop, and he now has the white lop on the market that gave me new courage to try again to breed the white lop. I had all the other colors already, but I prefer the golden fawn color.

The lop does not need any more care or attention, nor any better feed than any other rabbit. The best time to breed the lop is in summer, in the warm months on account of the young getting large ears as their ears grow in the first four months, after that their ears do not grow much. I had less disease with the lop eared rabbit than any other rabbit. They can stand as much heat and as much cold as any rabbit.

BANTAM BRIEFS.

Don't ask $10.00 for a $2.00 bird and expect to have "smooth sailing," or that many of your customers will be satisfied when the goods are delivered, as the men who are willing to pay $10.00 or more for a bird are generally men who know what a $10.00 bird should be, and are also the sort who will be easiest to satisfy, if they receive a bird worth the price they paid. The class of customers hardest to please, the ones that do the most kicking and yelling is the customer who sends for a bird at $2.00. This class of buyers are seldom, if ever, satisfied with what he sent for, and paid for, viz.: a $2.00 bird. He wants one that will score at 94 points.

Perhaps when he writes you first, he gives you that stale old tale, his **boy** or **girl**, as the case may be, wants a pair of Bantams, and he asks you if you have a pair that you could sell at $3.00 or $4.00. Don't take any stock in this sort of "guff." But if you do and answer him affirmatively, in nine cases out of ten when he incloses the amount he will tell you something like this: "I am sending you the money for the pair of Bantams you offered me, and now I want you to send me a good pair, I want to show them at the Turnip Town Show, and I can do you a whole lot of good, if you do the square thing by me, as I am well known around and if anybody wants anything in the chicken line they all come to me and ask where to send for them, and I'll send all of them, and more too, to you if this pair you send me scores 96 or more, etc.' To avoid trouble and settle the deal quickly better send his money back, and tell him to go to Helen Hunt or some other breeder for his birds.

Certainly, we know by experience, or we would not be so certain about it. We have "been there," but not of late years We now watch all summer for these $1.50 birds to develop and as soon as we "spot" them and they get to be the size of pigeons we cut their tails off, just below their earlobes and broil them.

As we said before, the men who are hunting for low priced live stock of any sort, are the very hardest class to satisfy. In a way, the majority of them are dishonest, as is proven by their letters after they have received the stock sent them, which often is really worth more than they paid for it. They prove that they are not satisfied with a $2.00 bird, and that they expected **more** than their moneys worth, which we call, by its correct name, dishonest. Therefore we refrain from selling this class of stock, unless locally, or to someone whom we know, and who wants them for mothers, or something of that sort, and whose story we can believe, and we advise the beginner to do the same and save time, stamps in replying to the kickers. He is certain to kick, save a ruffled temper, and perhaps retain the belief, "that all men are honest," (I don't think).

"Zim."

At the Ontario Provincial Show, at Guelph, Canada's greatest show, we won on Rose Comb Black Minorcas: Cock 1st, hen 1st and 2nd, cockerel 1st, 2nd and 3rd; pullet 1, 2nd and 3rd, and all specials. Single combs: Cock 1st and 3rd, Cockerel 1st, 2nd and 4th; pullet 1st and 4th, and all specials. T. A. Faulds.

FEED
TEN CENTS PER BUSHEL

PATENT PENDING

Is your main feed for growing chicks and making eggs costing you more than 10 to 15 cents per bushel? Have you raised 95 per cent of all chicks hatched this season? Can you care for 2000 layers and raise 3000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how I do it. My new book, "Profits in Poultry Keeping Solved," will tell you how to do it, as well as save you $25 on every 100 chicks you grow to maturity. My third edition of 5000 copies now ready. 3000 Single Comb White Leghorns and White Wyandotte chicks growing under my new system for the fall trade. :: :: :: ::

A Full and Complete Report
By
W. THEO. WITTMAN

Leghorns at Madison Square Garden

Written Expressly for the American Fancier

In again reporting this strong and highly important section of the greatest of all poultry shows, for the AMERICAN FANCIER, I wish to here reiterate my statement at the head of the report last year—"That, in penning such a report, the writer is thoroughly alive to the fact that his data and impressions were, of necessity, gathered mostly without that paramount privilege of the judges who placed the awards—of handling the birds. Therefore, while written without fear or favor, the reader, while perusing what follows, must allow accordingly."

All varieties of Leghorns, this year, numbered 224 birds in single classes as against 324 birds in the show of the year before. In exhibition yards there was also a falling off, or, there were twenty-three exhibition yards this year as against thirty-six last year. Whether any of this lowering in numers was due, even in part, to the unfortunate and regretable troubles arising over the placed awards which marked the preceding exhibition is hard to understand.

Anyhow, without a question, there are just as many Leghorns in the country as ever and the interest in them remains just as strong. And, with the practically universal satisfaction with which the judges placed the awards this year and the sportsmanlike way in which they were received, a larger and stronger show of Leghorns for another year is assured.

In S. C. White Leghorns there was a marked sameness of most superb type, color and head points in all the winners. They were as if cast in one mold. In fact in some classes this extended even beyond the ribbon birds and more than one good and deserving chicken of high quality failed of a place only because there was a limit to the awards.

How White Leghorns, according to our present ideals, can be much improved seems now almost a problem; for that highly desirable concave sweep or lines of perfect symmetry, with correct tail carriage and almost ideal head and head points, with immaculate whiteness of plumage seem to have been attained, too, in fullest measure.

1st cock especially strong in comb and a bird with almost a clean score in all sections.

2nd, the 1st ckl. in the 1907 show and the same magnificent picture of a bird he was as a youngster.

3rd also a superbly strong headed one with style and size to burn.

4th and 5th little to choose between, both being of the same general outline or type, varying somewhat though from the winner's ahead, and wonderful good cocks indeed.

1st hen, in fact all the winning hens, were just about ideal Leghorn size and in type, while they varied a little in individuals, were just about it. Good, indeed were the hens that got a place. They were par excellence and, this fully describes the hen class.

In cockerels the story of the hens was repeated or rather the story of the higher winning cocks, for they were the family image of them. The small, regular, typical combs, the absence of angels anywhere and the style or carriage were especially noticeable. Not to mention color and condition of plumage, which, from the aisle at least appeared in closest scanning, almost perfect. And yet in the class were at least a bird or two which certainly it seemed a shame, there was no room for recognition in the awards.

MOTTLED ANACONAS. Owned and Bred by Frank W. Mains, Morris Plains, N. J.

1st pullet had about a neat and perfect a comb as an artist ever drew on paper, carried on the best of heads, the ensemble, of which was marred by slight unichles in otherwise perfect lobes.

2nd pullet had a good comb, not the equal to 1st, but yet in the last analysis was a better pullet. Had, too, an extra low, full, well spread tail.

3rd pullet was very like 2nd; 4th failed in comb, while 5th was exceptionally strong in concave sweep and tail and tail carriage. In this class, too, were extra good ones with no awards left to place on them.

In R. C. White Leghorns, there was a cock winning first that was a jewel of the first water. A bird that could stand right alongside of the best in the single combs, and they are in no wise over praised in this report. There was also a very fine (1st) pullet.

S. C. Brown Leghorns brought out one of the best males seen in the Garden in years. Very likely one of the best ever seen there.

1st cock fairly good all-round bird. 2nd low in leg, but very stylish in spite of this. 3rd while well colored and perhaps better striped than 1st or 2nd shows this age strongly.

4th another fairly good one, but showing different shades in hackle and saddle.

5th, heavily striped but lacking in sickles.

1st hen, exceedingly strong in evenness and softness of color, but weak in hackle.

2nd, strong in this latter section, but not nearly up to the winner if freedom from shaftiness, albiet very finely stippled.

3rd hen, the best hen and one of the strongest that ever was shown, but suffering with a swelled head and eye.

4th was not shown in good physical shape either, while 5th was a well shown, big, shapely, well colored one, but spoiled by considerable shafting.

1st ckl. was strong in head points and in all shape sections, but the wonderful part of him was his color; his rich, brilliant red, nicely striped, with hackle and saddle blending perfectly, marks him as one of the bright particular stars this variety has ever produced.

2nd ckl. and by a different owner, was not far behind. This bird was bigger, more rangy and longer in back, yet taken as a whole, his type was not as pleasing as that of 1st. His color was grand too.

3rd, heavily striped, but with a smutty hackle, while 4th carried a most beautiful low carried tail.

5th, not shown in as fine condition as those above him.

1st pullet, grand in head points, especially comb. Breast color very fine and general color scheme of back and wings almost ideal, but with plumage in these sections which would not stand close scrutiny. Also the bird was too big to be typical Leghorn.

2nd, a very nice colored and finely stippled one with full low carried spread tail.

3rd, a pullet of most superb quality and one the more you looked into her the better you liked her. Absolutely one shade in all sections and free of shaftiness throughout.

4th, another extremely even one, but more coarsely stippled.

5th, the most shapely pullet in the class and quite full of color quality.

The cock in the 1st pen deserves special mention. He is very, very close to 1st ckl. in quality, and it will be interesting to see another year which of these two can win out in the cock class. This same 1st pen or yard stood well above its some half dozen competitors and was an easy 1st.

R. C. Brown Leghorns held their own in numbers, and in quality excelled those of last year.

1st and 2nd cocks were very good ones.

1st hen had won here twice before and was well holding down her position as "queen" of R. C. Brown females. Some of her pullets (notably 1st and 2nd winners) may dispute this title another year, so good were they.

1st ckl. was a grand brilliant red one carrying a lot of style and set off by a most superb lobe and comb, the latter inclined through a wee bit to Hamburg.

S. C. Buff Leghorns more than held their own. They gained, eleven birds. A few of the awards were especially hard for me to follow. I could particularly not see why a very fine cock was unplaced, etc. It must have been color or under color or the variation of the old irrational story of *"the best bird in the show, but disqualified."*

1st cock, an easy winner. Fine in shape and low, full tail, head points and surface color.

2nd, spikes in comb almost gone and generally showing the effect of age, otherwise a good one.

3rd, somewhat the same story.

The five winning hens were all very evenly good ones; 1st was an extremely even, light buff colored one. 2nd, just a trifle darker shade. 3rd, not quite as even in finish in color, but good.

4th was 1st pullet last year and is full of quality. 5th, very nice.

1st ckl. was a big, very shapely, even colored one, with a tendency to lopped comb.

A lopped or poor comb was a prominent fault also in 2nd and 3rd birds. While 4th seemed to have entirely too high and pinched a tail for a Garden winner. Right next to him, by same winner was a bird that looked a heap better to me.

5th went the other way in tail and carried it full low.

Pullets were just good. 1st seemed a trifle low in legs, and second a trifle pinched in tail.

There were no R. C. Buffs this year, although the official catalogue would have it so. A printer's error.

S. C. Duckwing Leghorns had a pair of darlings in 1st cock and 1st hen.

S. C. Black Leghorns, only five birds this year, but including a male that had "caught on" to that beautiful concave sweep of back and tail carriage, with out which a Leghorn now-a-days is decidedly a dead one.

All efforts should now be exerted to induce the ducks to commence laying, as if there is to be a supply of early ducklings the eggs should be set with as little delay as possible. Even if one does not wish to set the eggs oneself, such excellent prices are procurable that it pays well to produce them. During January, February, and the first week or two in March, prices are extremely high, 10s. 6d. per dozen being no uncommon figure during the first six weeks of the year. When the ducks commence laying depends, of course, very largely upon the date they were hatched, but yet even rather late birds can be brought on very quickly by suitable housing and feeding. In the morning, during cold weather, a mixture of the following will be found beneficial:—Three parts of barley-meal, two of middlings, one of maize, one of bran, with half a part of meat. Should the weather be warm the maize-meal should be omitted, and the meat only given every alternate morning. I think the birds will lay better if they are always fed upon soft food, though some breeders prefer to suplpy grain in the afternoon. In this case wheat and barley are the most suitable. An excellent preparation can be made by soaking grain in water for twenty-four hours previous to feeding; the grains swell out enormously, and they are made much more digestible. The mash should always be fed warm, as it stands to reason that if a large quantity of cold water is taken into the birds' systems a large amount of animal heat will be required to maintain the temperature of the body.

"A FEW POINTERS ABOUT THE ORPINGTONS."

E. M. Long, Osceola, Indiana.

I notice in some of our largest shows the tendency toward merging the two most popular varieties of Orpingtons, the Buff and Blacks, into two different types.

I have never been able to find a Buff Orpington that approached any thing near the standard cut in shape. Most of the Buff Orpingtons we see in the different shows are more the ideal shape of Rocks.

Legs too long, breast deficient, keel too short, tail too pinched, hackle undeveloped, too small in bone, etc.

Personally, I have never been able to breed them as low as I would like to have them, and I am of the opinion that almost all breeders who are followers of the standard type are in the same boat, and I see some are "hollerin" that if we get them massive in type and down on legs, with deep, long keel, etc., that we are going to loose their excellent utility qualities. I believe if we are not going to follow the standard, we had better either have it changed or change the name of the breed to "White Skinned Buff Rocks." some of the re-touched photographs seem to get pretty close to the standard in shape, but methinks when I see these birds in the show room they are about an inch longer in leg than represented by the engraving or printing plate. Still we have many good shaped Buffs, and the color has certainly been improved during the last few years. Yet we see very few males that are near solid buff in wing as a cockerel that do not show gray or white in wing and hackle undercolor as cocks. While at the base of sickles is also a common defect. There is a dividing line in the Buff variety and it follows that either smoke peppering or bronze, on one hand, or some traces of white, gray or steel, on the other hand, are bound to show in the majority of males. In the females I doubt if one out of a thousand, really has a solid, absolutely solid buff wing and tail. Old breeders tell me that it is impossible to get the solid buff, yet we are improving it right along, and I hope to see the day when we will get a goodly percentage of solid buff birds. We should not sacrifice shape in the effort to get solid buff color, however, as at the present day, shape needs more consideration than color. And another point we must strive for is laying quality should not be wholly forgotten in the mad race for fine feathers.

Although the Black Orpingtons are said to have no trace of the Cochin blood in their veins, yet it seems to me that many of the winners at our biggest western show this year, show many Black Cochin characteristics. Many of the birds with the ribbons, show long, loose, Cochin feathering, as well as decided cushions. On the other hand they are massive in size, big boned, with good eyes and combs. I would venture, if the matter could be proven, that there is some Cochin blood blended in with the other crosses at some stage of the game. Still with their massive size, I find the Blacks to be the equal of the Buffs as layers, and the equal of the Buffs in every other utility line, unless it be that the black feathers are a disadvantage as regards market quality.

In the Blacks, there should be a decided effort to get rid of the cushion in females, and to get the feathering closer to the body, without losing the massive type, short legs, and long heavy fluff. Breeders should discontinue to use disqualified specimens, with stubs and down on legs, and sidesprigs, no matter how nne the bird may be in other sections.

What leads me to believe that some breeders are using disqualified stock in their pens, is that I have purchased eggs and stock from some of our breeders who win at the big shows, have paid $5 and $10 per setting for eggs, and when stock was developed, stubs and sidesprigs seemed to be very plentiful. Then I have purchased stock from smaller breeders, that was said to have descended from Madison Square and other winners, and the only alternative was to send these disqualified specimens to the block and keep the good ones, or return the whole shipment.

I am inclined to think what Mr. Purple says about "faking" in a number of Item is more truth than fiction. I do not want to put myself on record as saying that all exhibitors are "fakers," but I believe there is too much of it done for the good of the rank and file of poultry fanciers. We are bound to get some disqualifications from the best mated pens, this is true of all breeds of recent origin but all of such birds should go on the market as soon as the defect is detected. There is no use of a fancier keeping such stock in his breeding pens.

Judges should be more careful to punish birds that have stubs and down on legs, or proof that such defects have been removed, as these rudiments of feathers are hard to eradicate from a flock.

The popularity of the Buff, Black and White Orpingtons seems to be increasing by leaps and bounds. There is certainly no general purpose breed that can compare with them, in beauty or utility qualities when breed closely to standard requirements, and it is only by constant and persistent effort that we can keep this popularity constantly growing.

West Haven, Conn., Show

Blue Andalusians
All to J. E. Bliss, Clinton, Conn.

Mottled Anconas
H. H. Catlin, Shelton, Conn.—Ckl.1, Pullet 4.

All to Wm. Talbot, New Haven, Conn.

Belgian Hares
All to Wm. Talbot.

Why chicks die in the shell. There seems to be so many reasons, there is no wonder they can't live. Then again there is a chance that these advanced reasons are, after all, somewhat theories or different ideas of different people. "Doubtful things are mighty uncertain."

* * *

A water fountain is an indispensible article if running water is not used.

Lice are dangerous and should be feared; cleanliness is a preventative.

Have a wide landing board for the youngsters as soon as they take to wing.

Foul water is a sure reproducer of every kind of disease to which pigeons are heir.

When training birds they should have the best of attention and only good feed.

Old lime mortar should be always kept in the loft as the pigeons are very fond of it.

A loft must be well ventilated if health is desired; draught is to be guarded against.

Dry twigs of from four to six inches in length are the materials best suited for a pigeon nest.

Birds allowed an unlimited quantity of salt will eat it to the detriment of their conditon and health.

Place the bathing pan on a gravel groundwork in order to keep the birds from soiling themselves after bathing.

Look out for lice.

Use plenty of powdered lime and carbolic acid.

Clean house every week regularly.

Give bath every other day.

Empty bath-tubs as soon as birds are bathed.

Keep the floor of the aviary clean and well sanded.

Watch out for that odd bird in your coop.

Scald the drinking fountains frequently. Use a lump of lime, hickorynut size, twice a week in drinking fountains.

What is the matter with my birds? I do not half take care of them.

Go through the house twice a day regularly and see that everything is correct.

Many of the infectious diseases are communicated through the medium of food and water. It is, therefore, absolutely necessary to remove, as soon as possible, from the main flock any specimens showing symptoms of disease.

MINORCAS AT NEW YORK.

By Judge S. T. Campbell

The Minorca class, at the recent Madison Square Garden event, consisted of over one hundred fine birds of Standard varieties. This class undoubtedly proved one of the attractions of the exhibition, as no better quality was anywhere exhibited in breed or variety. I heard many visitors remark that they had never seen a better class at the "Garden."

The R. C. Blacks were a big improvement over any yet shown as a class; the quality was pronounced and of a very superior nature.

The S. C. Blacks, consisting of eight cocks, were all well placed. The 1st cock —a wonderful bird, having correct size, great head points and a fine color, was truly an exquisite bird. The other winning cocks were close in line and all excellent show specimens. The first hen, a large, fine specimen, was extremely good in all sections; the other winning hens were all good. The cockerels furnished a royal contest; any of the winners could have exchanged places without arousing criticism. All were fine; had there been a special for head-points—the fifth prize cockerel would have been an easy winner.

The pullets constituted an evenly matched class; any of them were fit to win in fast company.

The first pen, made up of cock and hens, was shown in typical condition and well matched; all were of superior quality. Another pen, made up of cockerels and pullets, while evincing good quality, were a trifle immature.

The R. C. Blacks were clever. There were ten good cocks shown, large in size and containing true Minorca type, the blue ribbon winners easily winning, although all were good.

First hen was a veteran and took the lead in type and head points; others coming in order as placed.

The cockerels were strong in quality. In view of this fact, several good birds were not placed. The first cockerel was fine in shape and head points; he will be heard from at future shows. The second and third were both good birds —while the fourth was an excellent specimen—most attractive in the class for that matter. He lost on size, not being fully matured.

The pullets furnished another interesting contest—the first winning on type, size and color; other birds in the class, good and well placed.

The White Minorcas consisted of about a dozen good birds; they were excellent in quality and better ones have seldom been shown before. There is certainly a bright future for this attractive variety.

The first cock was great in shape; a grand bird; the second and third showed up well. The first hen was a "gem." The second and third hens were good. The cockerels were all good; the first leading in Minorca shape and type. The pullets were as good as any Blacks shown and were pronounced models in Minorca type.

Some good sales were made at fancy prices as soon as the awards were placed. Taken as a whole the class was unusually clever. Better specimens would be hard to assemble throughout the entire land.

THE FANCIER AS AN ORGANIZER.

G. R. Smith, Bloomsburg, Pa.

Can you organize a business? Can you organize a poultry business—small or large? What do I mean? I mean can you bring your business into "systematic connection, as parts to a whole?" That is the dictionary definition of the word "organize."

This power is of vital importance to any business man. To the fancier it is as vital as to the merchant king or the railroad magnate.

"Captain of industry" is simply another name for a master in business organization. He is the man who can "bring into systematic connection" the different parts of his business. Therefore, he brings things to pass, and men applaud him and envy him.

A typical human body is perfectly organized. Every part is in its proper place and ready to do its proper work —legs, arms, ears, eyes, and so forth. Let an arm change positions with a leg and the result is a monstrosity. The man is a life-long cripple. Failure is almost certainly his. A defect in organization. An ossified man is only a burden and a curiosity. A boneless man is equally pitiable. I am merely suggesting defects in organization.

Many a man's business reminds you of these human monstrosities.

"Is there profit in your poultry business?" I inquired of one. "Twenty-five hundred dollars a year out!" was his quick reply. I visited his plant. I was not surprised at the condition of his balance sheet. Any business, conducted on such basis would fail. It could not succeed. As well expect a man with the Black Plague to live and thrive. I learned later that he was a graceless profligate. His "stunt" in life seemed to be, spend as quickly as possible, a large fortune which he had inherited. Here was a strong illustration of *dis*-organization.

Take another case. "Has Mr. Blank realized any profits from his poultry business?" I inquired of one who was well qualified to answer my question. "About Two Thousand Five Hundred Dollars during the last two or three years," was the reply. I visited this man's plant. How different from the other! Everything in its place. Every part of his business fitting in, perfectly, with every other part. I talked with the man. His head was level. He knew, personally, so it seemed to me, every bird in his flocks. His business was organized like Wanamaker's. No cart was before the horse. Like a successful general, he knew his forces and disposed them accordingly.

One needs to know *when* to adjust or readjust. "To know just when to laugh is a liberal education," some one has well remarked. The time when we do a thing is almost certain to determine its success or failure. When to begin hatching; when to ship the culls; when to force the flocks for eggs; when to build larger. There are a hundred "whens" for the fancier to study with all the keenness of his business ability. As an organizer, his largest powers will be taxed to their utmost in deciding correctly when a thing should be done.

Done at the wrong time, as a rule it had better not be done at all.

What to adjust or readjust is next in importance. "Thirty millions, mostly fools," said Carlyle of the people of England. He discriminated mercilessly. The successful organizer must do the same. I have seen a flock of hundreds of fancy(?) fowls, "mostly" culls. The fancier did not distinguish what to put away. Half his birds were not earning their board. They were not qualified breeders. What grain to buy, what feed to purchase, what birds to buy and what to sell; these questions, and scores of others, must be faced, faced bravely, intelligently and decisively.

What to adjust in the machinery of his business, that requires the master mind.

How to adjust is the third consideration. Here is room for a genius. Here is play for the large vision, with intimate and detailed knowledge of all the bearings. The "when" and the "what" correctly settled, everything will depend upon the "HOW." The following bit of poetry, picked up by the way, will illustrate the importance of doing anything according to the correct method:

"A jolly young chemistry tough,
while mixing a compound of stuff,
dropped a match in a vial—
And after a while,
They found his front teeth and one cuff!"

Little less has been found of some fanciers—because they bungled. They ought not to blame the business. Their organizing ability was at fault.

But there is a way. Your business can be organized successfully. Are you the man to do it? Any man's business, if rightly handled, can be doubled, and quadrupled. It may need turning inside-out, or up-side-down. Many a man's business does. Study yours and see. It may need change of location, better stock, new equipment, an altogether different basis of operation. The successful fancier is the one who can correctly diagnose his business—discover just what is needed—and then, by persistence, by hard study and hard work, and by patient and skillful manipulation, push forward to victory.

1st INDIANAPOLIS WHITE WYANDOTTE PULLET

Owned and Bred by Ira C. Keller, Prospect, Ohio.

THE MATING OF STANDARD BRED VARIETIES.

By O. E. Remsen

Whether mating fowls for pleasure or profit, we should not disregard the principals of nature. We cannot allow standard bred varieties to run at large all intermingled, then separate them, and in two weeks or ten days expect thoroughbred or standard bred progeny to result.

Not only, should birds intended for breeding purposes, be separated early, but should never be allowed to mingle together, as nothing is gained by such carelessness and untold injury to purity is the result. If you are, or think you are, obliged to allow more than one variety to run together during the summer, then as soon as the weather, during October, becomes cold enough to necessitate the housing of the stock more closely, it would be far better to separate the birds from that time on. Following this plan birds would be ready to mate up along in January or February and better results would be obtained, although, BEST results are obtained from eternal purity.

When mating up your birds, give them your special attention as individuals—not as a flock, and remember, the most fancy birds are produced from pens containing but few females. An extra fine male mated to one, two, or three females will give far superior results, than if mated to a dozen birds, some good ones and some average birds.

In the selection of the male give first importance to health and vigor, this is denoted usually by a firm broad stand upon the feet and limbs well apart, altogether a sturdy looking bird with a strong lusty crow and not timid. He should also possess a firmness of muscle enough to give him a look of stamnia. Secondly, always try to have the male as near the standard color as possible, and as good in head points as can be obtained, as his influence is supposed to be greater than that of the females in these features.

The selection of the female is of great importance, and as in the selection of the male, health and vigor should always come first without these priceless virtues, it is doubtful if any mating would prove a success. Always try to use females that do not possess the same defect as the males. If standard weight is to be maintained, then look to it that your females are of standard weight and should your male bird lack good standard shape, then have this feature very pronounced in the hens.

Again in both males and females, do not lose sight of useful qualifications, but use males and females from prolific layers as far as possible.

If a pedigree breeder, then there is always many other things to bear in mind. One of the most important of which, is injudicious inbreeding, there is a vast difference between ordinary inbreeding and scientific inbreeding. One is applying a theory in a haphazzard manner. while the other, is a carefully outlined study of individual types and characteristics.

Pedigree, or line-breeding, can only be carried on, by two SURE methods—single mating or by the trap-nest system, either of which, when once used and results carefully noted, the fancier will never be induced to return to the old method of uncertainty.

Familiarize yourself thoroughly with the standard requirements for your variety and then stud the individuality of your specimens and success will remain with you, unless inbred too long, then if you need, and must buy new blood, do not put it off. You get double value by ordering early before all the best birds are sold as is apt to be the case when one waits until he wants to use a bird before thinking of purchasing it.

Use great care in answering inquiries.

* * *

Be precise in representing the stock you have for sale and don't try to bluff.

* * *

If you sell a man a cull for a good bird you are counteracting the effect of your advertisement.

* * *

Always remember that the second order from one purchaser is more profitable than the first, in money, prominence, and good name.

Easton, Pa. Holds a Banner Show

Wyandotte Class Larger Than Madison Square—Full List of Awards.

The Easton show was the surpise of the season, over 1,200 birds being cooped, White Wyandottes being the strong class, being eleven more single entries than at Madison Square Garden. Over one hundred and forty-five single birds and nine pens is certainly going some. Barred Rocks, Rhode Island Reds, Buff Rocks, were the other strong classes. All awards were up by Thursday morning. Easton has a great show and a good lot of hustlers, and has taken a lead among the quality shows of the country. Judges—Wm. J. Stanton J. Harry Wolsieffer and Geo. W. Webb.

Light Brahmas.
Cocks, first and third prize, Geo. H. Croft; second, W. H. Cyphers; fourth, Geo. Slafkosky.

Light Brahmas.

The AMERICAN FANCIER

ESTABLISHED 1893.

A Magazine devoted to Standard-Bred Poultry and Pigeons.

Subscriptions—50 cents per year—Canada, 75 cents, Foreign Countries, $1.50. Subscriptions to New York City 98 cents which includes the extra postage of 48 cents required by the Postal Regulations.

Expirations—Paper is discontinued at completion of subscription term. If a subscriber wishes a subscription continued he must notify this office and send the amount in payment for same. Renewal should be made at once to avoid missing a number.

Change of Address—When writing to change address, the old one must be given as well as the new.

ADVERTISING RATES

10 cents a line, 7 words to the line; $1.40 per inch, 14 lines to the inch.

DISCOUNTS—5% for 6 times (3 momths), 10% for 12 times (6 months), 15% for 18 times (9 months), 20% for 24 times (12 months).

The following shows the cost of a one, two and four inch ad. after deducting discounts.

	1 Time	1 Month (2 times)	2 Months (4 times)	3 Months (6 times)	6 Months (12 times)	9 Months (18 times)	12 Months (24 times)
1 inch	$1.40	$2.80	$5.60	$7.98	$15.12	$21.42	$26.88
2 inches	2.80	5.60	11.20	15.96	30.24	42.84	53.76
4 inches	5.60	11.20	22.40	31.92	60.48	85.68	107.52

CLASSIFIED ADVERTISING RATES

25 words or less, 1 time, 50 cents; 12 consecutive times (6 mos.), $5 00; 24 consecutive times (1 year), $8.00. Additional words 2 cents each per issue. Numbers and initials count as words. **Terms: Cash with order.** The wording of the ad. can be changed as often as you wish. Forms close on the 9th and 24th of each month.

The American News Co. have charge of retailing the paper over the news stands throughout the United States.

Published by
LEONARD W. LOTT & CO., :: :: 30 CHURCH STREET, NEW YORK
Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879

JANUARY 1 AND JANUARY 15 ISSUES MERGED

Owing to circumstances over which the editors had no control it was impossible to issue the January 1 number of the **American Fancier,** as a consequence, that number and the January 15 issue are combined. The readers are given an enlarged publication and we trust are fully repaid for the omission. Everything is now running smoothly with the **Fancier** and we hope to have every issue out on time. Delays and irregularities are as annoying to the publishers as they are to the readers and advertisers. Therefore we very much desire to steer clear of future delays in mailing the **Fancier.** The moving of the printing plant was the cause of the late mailing of the December 15 issue. We trust this explanation will fully cover the delinquencies of the past month.

Bryant Should Have Third Term

Within a few months the members of the American Poultry Association will be called upon to choose officers for the ensuing year. It is a foregone conclusion that President Bryant will be re-elected, and many go so far as to say that it will be unanimous. Mr. Bryant is the right man in the right place—A business man, who will have the A. P. A. affairs conducted on a business basis. Under his administration the A. P. A. has grown wonderfully in all parts of the country, and the rank and file have confidence in his ability. More confidence has been restored in the A. P. A. under Bryant's administration than any other, notwithstanding the Hallock affair, which Mr. Bryant was not responsible for. Never before has the A. P. A. been in such a flourishing condition, never before have the members throughout the country been so active in increasing the membership, and this activity has been largely brought about by the confidence in Mr. Bryant. Let the good work continue. Why make any change when things are in such a flourishing condition.

Any business that supplies food is on a solid basis. Especially is this true of the Poultry business. So long as the population of our country increases, that long, will the demand for poultry and eggs continue to increase, and also increase in price. We all admit that the poultry business is now one of the most valuable of the government's assets, and notwithstanding the fact that the American hen is laying millions upon millions of dollars worth of eggs annually, she cannot by any means meet the demands of the American people.

Today eggs are a luxury which only the wealthy can enjoy, and sometimes it is impossible for them to enjoy them, for oft times in many localities it is impossible to secure fresh goods at any price. What business presents better opportunities today than the poultry business, and what better branch can a young man take up? Surely the poultry business as a business is worthy of the most serious attention.

The Great Washington Show

The third annual show to be held in Washington, D. C., January 26 to 30, 1909, by the Columbia Poultry and Pigeon Association promises in every way to eclipse all former shows held in that city. The management has spared no efforts to make it a success and believes that the fanciers who fail to take advantage of what has been accomplished will make a great mistake, both financially and otherwise.

Washington offers unusual advantages for a great National show and the efforts of this association are being exerted, not only to make the coming show a success, but also to lay the foundation of a great exhibition to be held annually at the National captitol of this great country. This show will be held always while Congress is in session and when thousands of visitors are in the city from all over the world. It is believed that such a show should and will appeal to the fancier in a way that no other show in the country can. He will always be able to visit the Capitol yearly at its most interesting season and at the same time exhibit at a show which, because of the wide range of people it is bound to reach, should be second to none as an advertising medium.

An excellent corps of judges have been selected for this year's show, a very liberal premium list is offered, and in addition thereto a very large and attractive list of cash and other specials.

The Empire Cooping Co., will coop the show.

Address Calvin Hicks, Secretary, Rockville, Md., for premium list.

News

W. C. Bowman, formerly manager of Picturesque Farm, is now managing the Oaklands Farm at Trenton Junction, N. J.

J. H. Wolseiffer, formerly manager of Buck Hill Farm, will spend the winter at Dunellen, N. J.

If you have any suggestions to make send them to us.

Floor space at Baltimore is reported all sold.

Meet us at Boston. Make our booth your headquarters—Welcome.

Chas. D. Cleveland, Sunnybrook Farm, made a great win on Columbians at Hagerstown.

West Orange, N. J., show promises to be the banner show of the Skeeter State.

Will you help us double the circulation?

H. J. Walker, Whippany, N. J., will represent the FANCIER and the *Item* at many New Jersey shows.

J. L. Purple will call on you in the near future.

Try feeding apples to your poultry.

Keep plenty of water for your fowls at all times.

Sunflower seed fed to poultry increase the egg yield.

Poultry on the farm is a valuable insect destroyer.

Lice and chickens cannot thrive on the same farm.

The tamer the flocks, the more valuable and profitable.

Hens as sitters and mothers are more reliable than pullets.

Regularity in feeding is the secret of success among fowls.

Of much speaking cometh repentance, but in silence is safety.

Look out for lice when your chickens look droopy and sleepy.

One bad egg among those for market may spoil your reputation.

Feed cut green bone about three times a week to increase the egg-supply.

Skim milk is valuable as a food for young chicks in hot, dry weather.

Keep plenty of dusting places for the chickens; there is no better lice preventive.

Do not confine your turkeys, when fattening them, over ten days or they will lose flesh.

The wild pigeon is better bred than any of the tame varieties, as it produces true to its kind always.

Be kind to your fowls; make friends with them and they will repay you. Fright reduces the egg yield.

THE LAKENFELDER FOWL

By THEO F. JAGER.

This to this country rather new and uncommon breed seems to be gaining slowly in popularity. The fact, however, that their original importers and breeders are holding on to them, and that they are not omitting to show them at the best of our Eastern shows, including Madison Square Garden, seems to be proof on the other hand that there must be some substantial proof for their keeping quality.

No one entertains any doubt on the score of this being a rare colored and beautiful breed. Wherever they have been seen, they have attracted as being oddly colored, to say the least. The contrast formed between the two leading primary colors is striking and a flock of them deporting themselves on a green lawn is a sight seldom equalled. As Lakenfelders are of a very active disposition, good on the wing and everlastingly looking for choice morsels, they are probably not the best breed for close quarters, unless overhead wiring is resorted to. The craze for size almost obliterating most other good points in a fowl, that seems to be the rule broadcasted over our land, is another point at present against Lakenfelders. They are not a large breed, are not meant to be a large meat breed, and their aim and destination is fulfilled in supplying the egg needs and furnishing joy in having such a beautiful egg-machine in the yards.

There is no doubt but originally Lakenfelders were a sister variety to the Silver Campines selected for dark tail and hackle markings and the Campines being a Hamburg variety with a single comb, cannot well be expected to furnish a Rock size or meat abundance. The most reliable records at our disposal seem to place their cradle in Germany where all Hamburgs originated from. In that country they have been known for over forty years, have Specialty Clubs to look after their improvement and classes at the shows, as long as most people can remember. Finally finding their way into Holland and England, they were rechristened Lakenvelders, to conform more with the tongue of the Dutch and English, and we, spiting the reliable records of their German originators, are following the English lead and call them a Dutch breed and give them a Dutch name.

The breeders of Lakenfelders have a duty to perform, if they wish to make them one of the popular breeds, to which their grand egg records entitle them. Increase the size by all means to Leghorn size, and aim to have the comb only a trifle smaller than a leghorn comb and do not insist on the female's comb to stand erect and good progress into the road of popularity has been made. Another thing, the saddle would in my opinion be most attractive pure white, slightly stripped in the male, as against the black mostly fancied now. A bird with an all-white body and small black head and neck and all-black tail is certainly a finer appearing bird, than if the black end-colors include the saddle.

Lakenfelders have blue legs. This is another point against them in the eyes of breeders, educated and taught to love yellow skin, legs and meat. We are as a nation, however, gradually, but surely getting away from the fallacy, that the best hen must have yellow to be good eating and the Orpingtons for one are learning us a steady lesson that pink too may be good eating and time no doubt will teach us, that yellow is in fact a very poor color to hide culinary excellencies.

The best will finally win and fully believing in this old maxim, we need not fear the ultimate success of Lakenfelders as a fancier's ideal fowl and egg machine.

Advertise originally.

W. L. HOWELL,
Geneseo, N. Y. 4

WYANDOTTES. IDEAL SHAPE, pure white. Few pens yearling hens, headed if preferred by cockerels, $15 to $20 each. The finest cockerels I ever raised, $5 and $10. You will be pleased if you send for one. Enclose stamps with inquiries.
MRS. H. A. McCLINTOCK,
Livonia, New York 26

40 BUFF WYANDOTTES, SANBORN strain, must be sold at once. Prize winners included. Several solid buff; fit to win in hot competition. Sickness, reason for selling. Will be sold cheap, quality considered.
CHAS. PEARSON,
Geneseo, N. Y. 6

FEED
TEN CENTS PER BUSHEL

PATENT PENDING

Is your main feed for growing chicks and making eggs costing you more than 10 to 15 cents per bushel? Have you raised 95 per cent of all chicks hatched this season? Can you care for 2000 layers and raise 3000 chicks without help and have time for other work? If not, you want my system. Visit my plant and see how I do it. My new book, **"Profits in Poultry Keeping Solved,"** will tell you how to do it, as well as save you $25 on every 100 chicks you grow to maturity. My third edition of 5000 copies now ready. 3000 Single Comb White Leghorns and White Wyandotte chicks growing under my new system for the fall trade. :: :: :: ::

THE IDEAL SQUAB BREEDER

The American Fancier

VOL. XXXVIII NEW YORK CITY, FEBRUARY 1, 1909 No. 720

By the Rev. J. N. WILLIAMS, B. A., ENGLAND

To Increase Egg Production

Written Expressly for the THE AMERICAN FANCIER

It is very evident to any one who studies the domesticated hen that she is today a far different creature from what she once was, that her egg laying powers, by domestication, have been considerably increased along the centuries and that the Gallus Ban Riva, from which she is believd to be descended, is but a very poor performer compared with her. And when we look at other stock, such as horses (and even dogs), or sheep and cows, we see that wonderful advance has been made, through breeding, upon the original wild state. The question is, how has it been made? Are we to suppose line-breeders all the way, have been at work on pedigree strains, perfecting the laying powers of fowls as much as they possibly could? We must not suppose all the sense to be in the present generation, or present century. There were fine breeds of horses, doubtless, in the far-back civilization of the milch cows and goats, of sheep and swine. And undoubtedly just as best milkers and best fatters have been produced at some time or other, and probably gradually along the world's history, so good layers have been sought after too in the domesticated hen, and bred for. It may have been, we do not deny, in a rough and ready sort-of-way; nothing, comparable, with present day line breeding, but who knows? The ancient Egyptians, if they could hatch thousands of chickens annually in kilns of their own devising, could give their attention too to increase in output of eggs. The most rational way, of course, is to breed from individuals displaying special propensity in a given and desirable way. Thus we have heavy milkers, heavy meat producers, and, of course, improved egg production. This is the law upon which all improvement in domesticated creatures has ever worked. Managed successfully it has, in the long run, worked a decided improvement. But owing to want of more knowledge of the laws of breeding, certain undesirable things have cut in (incestuous breeding, for instance), which have crippled matters by reducing constitutional vigor. So that it has been affirmed by one writer that it is this loss of vigor which is at fault, and not the egg producing power, as, on examination, there is abundance of oval, if only it would come to the birth. There is a modicum of truth in this. But it is not all the truth. We can see that in warm countries, like those bordering on the Mediterranean, we have the best and most prolific layers. Why? Because the climate has been salutary. Where there is heat, living things generally swarm in abundance. Life is beeming. Reproductive powers are at their best. Propagation is easy. And in course of time this property becomes stamped on a race. Still when all is said and done, even there, it would be folly to breed from the worst layers. Such a principle finds no lodgment in the management of a skillful breeder. And if this be the case, the reverse is also the case. Therefore we come upon three principles which, acting together, secure success. We must allow in great measure that like produces like, if there are no cross currents; that suitable environment must be a leading feature too, and that constitutional vigor plays no small part in a successful result. Now we have some ground to work upon. We shall not be far wrong if we breed from our best layers, keeping too close consanguinity at a distance; if we get the environment as natural as possible, and all the way breed, feed and rear for constitutional vigor. It is generally conceded that to breed from father and daughter, granddaughter and great-granddaughter has not a visible injurious effect upon stamina, and that if a double line be kept, whenever weakness makes its appearance, blood can be brought from the other side and vigor be restored. For egg production we do not want to cut matters too fine in this respect. Now for natural environment. The nearer birds can be bred to the natural time the better. Here, April is the month when wild nature propagates itself mostly amongst the feathered races. And it will be found that chickens reared at the right time, neither too soon nor yet too late, will, in the long run, produce the most eggs. As the cold weather is, as we may surmise from what has gone before, detrimental to good laying, it stands to reason that, before we can have any expectation of a hen laying during the low temperature we must get her started before the cold sets in. If we do not, it is possible that, unless specially protected, she may miss laying for the most part of the winter. Of course some breeds, by reason of their stronger constitution and the wealth of feathers upon them, which keeps them warm in Arctic weather, will prove better winter layers than others. But it is also a fact that our best summer layers can be made to lay all the winter, if we can get them hatched at a natural time, and keep them as warm as their more heavily feathered sisters. As a general rule then, our chickens should be hatched about April, and they will come on to lay in most breeds, about late in September or early October. To induce them to lay before this is entirely unwise. For being earlier hatched they will, in this country, go into a more or less partial moult in October, which chills them, for they cast their under feathers mostly, once the laying has stopped there is with them a real danger that the birds will not lay again till probably the third week in February. We have plenty of birds hatched before April that are deep in the moult now. Again, if the birds are hatched much after the natural time, they do not come to laying maturity fast enough, as the cold weather advances, and so they too do not lay till after eggs have passed their highest prices. In both cases we have loss. For bear in mind, reader, it is not the number of eggs exactly which a hen lays that makes her pay the best. It is rather the fact that she lays the majority of her eggs at the right time, the time when prices are doubled.

We have seen that warmth is one of the circumstances attendant on fecundity. Therefore it is evident that to the best of our ability we must sustain the warmth in the cold time. We cannot put denser and thicker plumage onto a bird that has it not, but we can by judicious housing and careful feeding, keep up the internal heat at a sufficient height. Therefore it is evident we must give heat-producing foods in extreme weather, and more of them than in fine balmy times. We have neither to overdo nor yet to underdo in this matter. We must study the value of different foods and their influence on the hen, and we must, for cold weather, select the heat-givers. A certain amount of flesh and a little fat is conducive to warmth, but gross fat is prejudicial to good laying. You can not have a hen fat and laying well at the same time. It is an utter impossibility. And to keep things in proportions, mixed and balanced, rations are necessary; not, of course, to an ounce of this and a dram of that, but in a sensible way, as we should feed ourselves for a certain purpose, with judicious variety and measure. Indian corn and Indian meal, or maize and maize meal, as it is called, is much decried as being too fattening. But taking it all round, given judiciously and boiled, it is without doubt the cheapest food we can use, considering the cost of it, and the price of eggs. Other foods will produce a slightly larger output. But their increased cost puts them out of count. At the same time oats and oatmeal, bran, sharps or thirds, a little cooked lean meat once or twice a week, a pinch of warm condiment, all mixed with the Indian meal, will do wonders. Here we have just now a craze for biscuit meal—and the price is prohibitive—Indian corn, flaked, or flakerine, as it is called, is a food much to be commended if used carefully.

The woody fibre of the cells of the corn is broken down by steam and the result is an assimilable food of great merit, easily digested. Potatoes and starchy foods ought to be given very sparingly. Of course, much depends upon the owner as to the output of eggs. Here, for market eggs, the principle obtains that a hen only can lay a certain number of eggs, which number for her is determined at the beginning. And the sooner they are forced out of her by condiments, "ovum" powder made of liquorice, ginger and fenugreek, the better. The length of her life must not count in the business. Others again are for saving moulting time. They get their chickens to lay by October and continue all through the winter, spring and summer, and then when they show signs of going into the moult they sell them at enhanced prices as one-year-old hens, and have a new batch of pullets to take their places and drop into laying as the older ones go out. Thus there are some eight weeks of moulting time saved.

This is ingenious, for let us remember that the weight of the pullet's laying is said to be the same as that of the hen in her first year as a hen. Now, as the pullet's eggs are somewhat smaller than a hen's, it stands to reason that she must lay more than a hen, and be more profitable, so long as her eggs will pass muster with the buyer, and are not sold by weight but by number. Therefore, to sell the pullets after their first season of laying is to save weeks of moulting, and also to get more eggs even if a trifle smaller. On no account must a hen be kept after her moult, as a hen, unless she is an extraordinary layer. It must be borne in mind that forced eggs are no good whatever for setting purposes. They are the result of unnatural treatment and their vitality suffers accordingly. It may be said that forcing cannot conduce to stamina and constitution. No, the hen is the sooner worn out for it, and as I have said, she must not be bred from on any account.

But we can keep hens in proper warmth by means other than feeding. Housing and sheltered runs and constant and vigorous exercise are essentials. Brick and stone houses are always preferable to wooden ones, for the reason that they are warmer. We do not want artificial heat, as in a stable. For, kept in a high temperature all night, the birds must suffer a chill when let out next morning. But in any case, they will find the outside temperature often much below that of their sleeping quarters. Therefore they must be fed with warm, soft food, or they must be set vigorously to work to hunt food. This is done by throwing their grain into long straw which causes them to scratch. The raison d'etre of the scratching shed is to secure warmth and dryness, for with a wet state of affairs comes chilliness. On fine days a scamper will do them good. So they may be let out and made to seek food. This disperses them and leads to another point, that of few hens being kept together, if they are to lay well. A flock of a dozen hens will invariably lay better than a flock of a hundred, kept on eactly the same conditions, and bred exactly the same way. There is more animal life to be got, less contamination of the ground, freer conditions altogether, more breathing space, less liability to disease. In a word the colony system beats the large flock system.

Now for stamina. It is with hens as with us. If we have good sanitary conditions we have also good health. And from healthy persons are bred the strongest children. A hen requires not less than ten cubic feet of fresh air room per night in her roosting quarters. Altogether she is in need of between 40 and 50 cubic feet of fresh air every night. But as the air is renewed about four or five times in the night, a space of ten cubic feet will meet her wants. She must have clean quarters, clean water, sound food. There is a temptation to give nasty, cheap food, little better than husks, or damaged or swollen grain, and vile productions by way of some meat meal and some cut green bone. The latest substitute for these unwholesome productions, which are excellent if really fresh, is a substance, a by-product of milk. Milk albumen, it is called. It is claimed for it in the New York *Tribune Farmer* that it far surpasses all else for egg production. It is granulated like cracked maize, and is said to have increased the output of eggs by 30 to 40% But I have now said enough on the leading principles of egg production except on the one point of snow and ice. Under no circumstances should laying hens, if it can be helped, be allowed to partake too freely of snow, or drink ice cold water. It is a well known scientific fact that any solid which is turned into liquid or liquid into gas, can only do so by the application of heat. For instance, put a block of ice upon the fire in a vessel. Take its temperature. It is 32 degrees Fahrenheit or 0 degrees Centigrade. Let it slowly melt. When melted insert the thermometer. It registers exactly the same as before, when all is just melted. But look at the heat that must have gone into the solid to turn it to the liquid, though it has not raised its temperature. Seventy-eight thermal units of heat, says the scientist. Exactly so. They came out of the fire. But if the hen swallows morsels of ice and snow, the heat required to turn them into liquids must come out of the hen and lower her temperature. Try it, reader, by eating ice with the thermometer below zero. At the same time, a hen, even if sufficiently supplied with lukewarm water, will, eat a little snow as dogs eat a little grass. And what a bird helps herself naturally to has generally some good in it. But to force her, through lack of water, to partake freely of snow to quench her thirst, is an insane thing to do, or to force her to drink water only little removed above freezing point.

Then remember that by far the greater part of an egg consists of water. If the hen does not partake freely of water to her full desire, how can the juices in her body be formed, which finally go to the composition of an egg? And how can you expect a delicately flavored egg, if such water as is given to the hen is unfit for human consumption?

Winnings at Madison Square Garden.

The Path of the Hare Breeder Not Strewn with Roses.

By R. W. Willis, Marl Ridge Rabbitry.

I have read so many articles written by amateurs it has given me the idea that perhaps after I had tried to put up an article some old fancier of long experience would look upon it as I looked upon these articles. In one instance I read an article on lops, written by a fancier, or would-be fancier, that one year before, knew nothing about lops but their names, and had never owned one, but in his article he spoke of the ease in rearing the young and attaining great "earage" and how to feed and care for them. Soon after I found that he only owned one pair and they were the ones he purchased to start with.

The above is a common occurance and the amateurs of this kind usually have read every book or paper published on the subject of rabbits, and can converse fluently on the subject of color, breeding, etc. He knows the standard by heart; he knows the name of every variety, every great breeder and names of all the famous winners and their breeding. He has corresponded with every advertiser in the magazines and sends out lots of postals asking prices, breeding, etc., in full.

In the morning as our friend feeds his pets he dreams of the wealth of gold. Not golden Belgians, but the real clinking article. He expects to be as great a fancier as the old breeders in six months and to win all the blues in one year; to be a great importer and originate some new ones in two years; to build more extensively for his helpers and to keep two men and a stenoprapher and buy a larger farm the third.

He dreams of rabbits as a get-rich-quick scheme; has probably figured how many he can raise in a year and the price at eight to ten to each litter and all to live. But, friend, probably you have blown soap bubbles and know what becomes of them. I do. I have blown them. But let's go out and visit his rabbitry. He describes some fine Belgians as we go down the path, but you see them in another light. The buck is short and stout; he is of a sickly yellowish color. The does are a dirty grey, the color of a half-blood English type of Flemish and they follow the Flemish in type of body. His Angoras have fine straight hair; it never tangles; it's too much like a horses' mane. Their heads are nearly as long as the body, and slim. I haven't room here to describe them all, but these are good samples of his best winners at the pumpkin-town show, where he is the only exhibitor. Brother fancier, think it over. Isn't it true? I have been in these shoes and know of several that have been in them since. So you see this is not a fable or taken from some misguided brother fancier, but is a mixture of my own experience, mixed with some I have seen. But there is nothing so valuable as experience. If we could only sell it for the price we had to pay.

The annual meeting of the National Columbian Wyandotte Club was held in room 15, Madison Square Garden, Thursday afternoon, December 31, 1908, and was a largely attended and very lively meeting. Matters of interest to the members were thoroughly discussed and decided, and a great and growing interest in the breed and club was shown. A committee consisting of Messrs. Cleveland, Arnold, Eastman, Sites and Orr was chosen to revise the constitution and by-laws and report at the next anual meeting. The club is to issue a new club catalogue as soon as possible, and any Columbian Wyandotte breeders who are not members already, should join at once, in time to have their names appear in the list of members. An almost entirely new set of officers were elected and the club starts the new year in good financial condition with the following officers:

President, Thomas F. Rigg. Iowa Falls, Iowa; vice-president, S. Theo. Campbell, Mansfield, Ohio; secretary-treasurer, Geo. F. Eastman, Granby, Mass; executive committee, President Thomas F. Riggs, Iowa Falls, Iowa; Secretary Geo. F. Eastman, Granby, Mass.; Chas. D. Cleveland, West Orange, N. J.; Chas. M. Murphy, South Manchester, Conn.; J. H. McDanell, Warsaw, Ky.

Tracing the Ancestry of Fowls.

Winding up with a Description of a Present-Day Plant. Metropolitan Press Devoting Pages to Poultry Culture.

Herbert S. Ardell, in Brooklyn Eagle.

It would seem that all attempts, beyond a certain point, to trace back the history of some of our most common fowl, have been unsatisfactory. It is, however, agreed that their ancestors were natives of the warm climates of Asia, though to many the original ancestry is involved in uncertainty. The observations of travelers and those who ought to know would direct us to look to the forests and jungles of India for the aboriginals. That the fowl was domesticated and extensively spread at a very remote period is most evident, for when the Romans first invaded the shores of Briton, they found the fowl in a state of domestication, but not for the purpose of food. This is why Caesar said, "they deem it not lawful to eat the fowl, the hare and the goose."

Not only do the classic poets and historians speak of the high antiquity of the fowl, but medals and coins proclaim the same, and bear its figures stamped upon them, nor is its delineation absent from other affairs of remote periods. Among the Greeks and Romans, the fowl figured in all the public shows, and then as now they were fed and cared for up to a state of great perfection. The ancient methods and facilities were of course entirely different. In fact, they must have been crude indeed compared with our modern methods of raising fancy fowl for the show pens.

The first Europeans who came to America brought fowls with them, but not much attention was paid to poultry raising here until within the memory of men now living. There were always a few fanciers and poulterers in and near the seaboard cities, but not until 1850 was any special attention given to the subject, except in the case of a few of the old well-known breeds, as games, white-faced Spanish, Hamburgs and the native Dominique fowl and its crosses with the above, which were bred in a small way in the immediate neighborhood of the large cities. The year 1846 marked an epoch in the raising of poultry in the United States. In that year the first Asiatic fowls were introduced and created an immediate sensation. By 1850 the poultry craze had fairly set in. A new breed was sent to England. An enterprising Yankee presented her majesty, Queen Victoria, with some of the famous birds, and an uncommon interest in poultry was manifested. Poultry clubs and societies were formed. The first poultry show in America was held at Boston in 1857, but the first home of the Asiatic fowl on the western continent was Philadelphia, whence it was soon distributed to New England, and thence to Western Europe. The interest in poultry being thus awakened, seafaring men brought fowls from different parts of the world, and several new foreign breeds were introduced. Among the most noted of these were the Leghorns from Italy, between 1855 and 1865. In 1867 the French breeds were introduced. The Dorking was brought from England, the Silkies from Japan, and many varieties from the Indian archipelago and elsewhere, most of which, however, were more novel than useful. Thus from 1855 to 1875 the world was searched and varieties more or less valued were contributed to the general poultry stock.

It was about this time (1873) that the American Poultry Association was organized. It was the object of this society to formulate and adopt a standard of excellence to be used exclusively by associations in awarding prizes on exhibition poultry. This stirred those interested in breeding fancy fowls to experiment in order to improve the breeds. It also entailed the scientific study of the subject by the fancier, and the result is today we have in several parts of the United States some of the finest fancy poultry plants existent. There is within one hundred miles of New York one of these scientific poultry farms. It is known as Pine Top Poultry Farm, and because of its reputation is visited yearly by both the curious and interested. The farm consists of one hundred and twenty acres, and is an ideal place for fowl. Besides the many special buildings there are forty colony houses distributed throughout the trees of pine and chestnut which have been cleared of their underbrush.

In these different structures are raised with almost the same care as a household pet, barred Plymouth rocks, single comb white Leghorns, buff, white and black Cochin bantams.

The breeds of fowl are divided into eleven classes as follows: American, Mediterranean, Asiatic, English, Polish, Dutch, French, Games and Game Bantams, Oriental Games and Bantams, Ornamental Bantams and miscellaneous, consisting of Silkies, Sultans and Frizzles.

The first three classes are the most prominent and are probably bred more than any of the others. The American consist of Plymouth Rocks, Wyandottes, Javas, Dominiques, Rhode Island Reds and Buckeyes. The Asiatic consist of Brahams, Cochins and Langshans, and the Mediterraneans consist of Leghorns, Minorcas, Spanish, Andalusians and Anconas.

On an up-to-date poultry plant great care is given to the gathering and selecting of eggs. So important is this first step toward the future embryo that the eggs are collected at stated times, several times a day during cold weather, to keep them from being chilled, and in the summer but once a day, and that in the late afternoon. Preserving the natural moisture in eggs, and therefore their substance unexhausted, is significant in producing and improving the classes of poultry. It is for this reason that they are gathered in the late day, so there will be as little moisture escape as possible, which, of course, proceeds more rapidly in warm than in cold weather.

The poultry fancier has made a scientific study of the egg, which exhibits very many and most striking evidences of the design and beneficence of the Creator, in the form of wonderful and perfect adaptations to its immediate object of developing, feeding and maturing an embryo bird.

The peculiar composition of the shell most beautifully combines the properties of a strong shield, a porous sheath, a smooth coat and a frangible doorway; while the chemical elements of both the white and the yolk, besides possessing mighty mutual adaptation for developing the bird, are singularly prominent in nutrition, and exert almost the highest possible power as food for the germ.

When all the eggs are gathered up they are tried out by means of an electric egg tester, which is so adjusted that when an egg is put over the opening provided for it, the weight of the egg tilts part of the tester and produces a concentrated light which shines through the egg and shows clearly the germ, thus ascertaining if the egg be fertile or not.

Those eggs which are productive are transported to racks in the incubator building, to which there is much interest attached. There is a specially built cellar of large dimensions, and lined with a metal ceiling to make it fireproof. Here are 26 incubators running during the season, with a capacity of from 160 to 240 eggs each.

The eggs are now taken from the racks, sorted and placed in the incubators. They are further tested at regular intervals, and if the chicks are strong and doing well, they will begin to pip or break through the egg on the nineteenth of twentieth day, and no later than the twenty-first day, from the time they were put in the artificial hatcher.

That nature is prodigious in her workings is beautifully demonstrated in the case of the assistance she provides each chick to break through the shell. On the beak is a small but hard cartilage-like growth, which aids the young bird in puncturing the outer covering. Upon its successful arrival, this superficial development is of no use, and after a few days falls off.

When the chicks are born they are allowed to remain in the incubator for twenty-four hours, and are then removed to the hovers, or brooders.

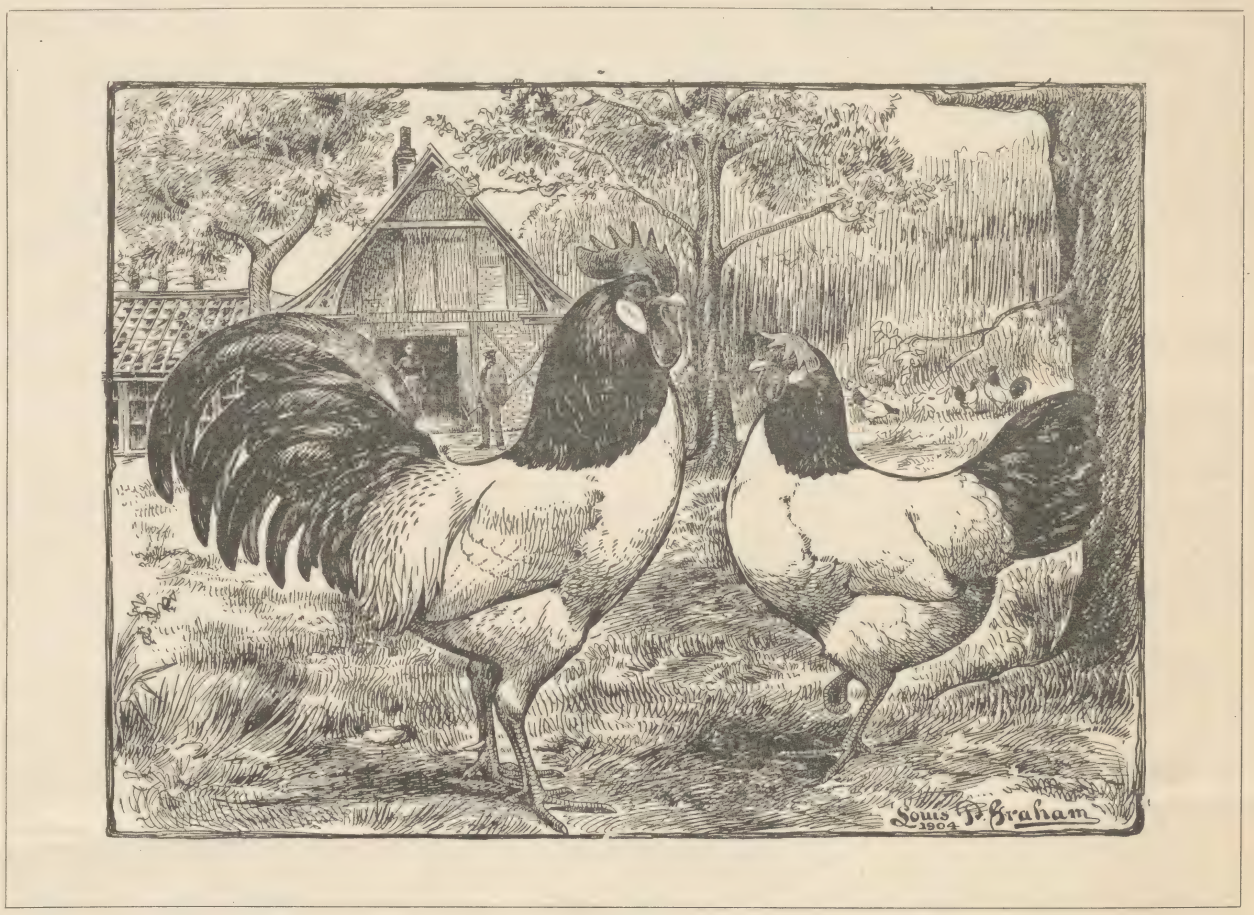
The original brooder house on the farm was 15x120 feet, divided into small pens, with a passageway in the rear. This had the open-pipe system, the temperature of which was regulated by electricity, so that the thermometer could be kept at any degree desired. This has, however, been eliminated, and the better plan adopted of a room over the incubating cellar which is well equipped with a battery of universal hovers. This room is divided into small pens, and so faces that it has the sunshine throughout the day.

That the first few weeks of a chick's life are more critical than those occurring after five or six weeks is admissible; still, a chick is by no means raised when it is three or four weeks old. To promote a strong and vigorous bird that can successfully withstand the disease which saps the vitality and checks its growth, strenuous measures must be taken to avoid or rid these indispositions. The chicks must be regularly greased and dusted, and great care taken in the matter of all accessories.

When the chicks have attained a good healthy growth they are taken from the brooder house and placed in the colony houses, each one being fitted with a hover. As soon as they are sufficiently grown so they will not crowd when artificial heat is done away with, the brooder is removed and the colony house remains their home until they go into permanent winter quarters.

The Barred Plymouth Rock house is a splendid building and provides ideal conditions. It is 15 by 252 feet, and so built as to have plenty of fresh air and still keep out the frost during the coldest weather. Fowls naturally like to roam, and from each section of the house is an imense yard, in which they can be confined in all seasons.

Living in these suitable quarters we find this most popular of all fowls in America, the Barred Plymouth Rock, where it is found in large numbers and on more farms than any other breed. They are excellent mothers, kind and persistent setters. They rank nearly equal to Leghorns as layers.



There are two white Leghorn houses, each 15 by 180 feet, divided into twenty compartments each. Two pens of 12 by 18 feet each are devoted to from ten to fifteen fowl, one pen being used as a scratching shed and the other for roosting and laying. What an inspiring sight to the enthusiastic fancier on beholding this beautiful Leghorn, which, when in its place, no fowl on terra firma can surpass. It is naturally a nervous and wild bird and must be treated with unusual care.

The cockerel house is 25 by 100 feet. This is a most up-to-date building. Divided into pens 20 by 25 feet each, and above the floor some four feet, are Empire coops, used for the training of fowl previous to exhibitions. This building is heated throughout. The second floor is used for a pigeon loft and is divided into four sections and has a covered flyway in front, 200 feet long.

The place provided for setting hens exclusively is a building 20 by 50 feet, with a separate compartment for each hen. This is placed on the farm where absolute quiet reigns, and is so arranged that over 100 hens can set at one time.

With little thought one realizes that it requires some system to provide feed for all these hungry birds. For this purpose a most practical structure has been erected the "feed house."

This building is so constructed that wagons can be driven under it and grain be unloaded in wet weather without risk of dampness. All bags are emptied into a hoper and the grain elevated to each separate bin. The bins and shutes are arranged so that during continued hot or damp weather the grain can be kept moving so that air can circulate through and prevent its getting musty. The machinery is run by a 16-horse power engine. On the first floor is a mill for grinding all grain, a meat and bone cutter, and on the opposite side there is a room for packing pedigree eggs, a machine for cutting straw for litter, clover, cabbages and beets. On the second floor are power rip and cross-cut saws for making special crates, and a compartment where birds to be shiped are put in readiness for transportation to the poultry show.

Dorking Club Officers.

The annual meeting of the American Dorking Club was held Saturday, January 16, at 3 P. M., in Mechanics' building, Boston, Mass. President Henry Hales, of Ridgewood, N. J., occupied the chair. The minutes of the previous meeting being read, were adopted, and the report of the treasurer showed the club to be in good financial standing. The election of officers resulted as follows: President, Henry Hales; first vice-president, George B. Inches; second vice-president, M. R. Jacobus; third ivce-president, John S. Cope; secretary and treasurer, Robert Officer. After the regular business of the meeting was disposed of the president announced that it was now in order to discuss the question of comparison of the Dorkings with other breeds. And a very lively debate was the result, such veteran breeders as Hales, Inches, Westfall, Cope, and others, entering into the spirit of the discussion.

"Why is there not more demand for the Dorkings in this country?" was the next question, and the conclusion arrived at was that the public were not aware of the genuine qualities of the Dorking, both for table and egg production.

"Why have they as a breed stood the test of generations?" came next, and brought out a great many reasons, but the main one, "by merit alone," seemed to be the popular verdict.

Votes of thanks to the Boston Poultry Association and others, brought the pleasant and harmonious meeting to a close.

Any person interested in Dorkings can be supplied with descriptive booklet of the breed by applying to Robert Officer, secretary of the American Dorking Club, North Grafton, Mass.

The Orange Show.

The Orange Poultry, Pigeon and Pet Stock Show will be held at the Skating Rink, Halstead street, East Orange, N. J., on February 10, 11 and 12, 1909. This show is to meet the demands of the Newark and Orange fanciers—and those of Northern New Jersey. It was impossible to secure a proper hall in Newark, hence the Skating Rink has been engaged. This building is positively the best in the State, being 100 by 110 feet on the main floor and with a vaulted ceiling 30 feet high. The exhibition room will also be well lighted and properly ventilated. The event will be a "head-liner," the birds will be cooped in new Empire coops; the judges are as follows: J. H. Drevenstedt, George Purdue, J. H. Wolseiffer, W. F. Fotteral, Thomas Peer, Dr. J. S. Wolfe, W. J. Stanton, F. H. Davey, James Glascow, F. W. Corey, A. J. Reinhardt and Fred Huyler.

The prizes are: $3 first and $1.50 second on six birds. There are nearly 400 special premiums—one of the largest lists ever offered to the best of our knowledge. The shipping facilities are excellent. The exhibition hall is next to the Brick Church Station, D. L. & W. Railroad, ten miles from New York, —also reached by the Erie. The Orange exhibition is only a three-day show. Conservatively speaking, there is no doubt but that 2,000 birds will actually be cooped.

The State Cat Show is also to be held here in the entertainment hall, 60x 40 feet. Miss Kroeh, of Orange, will do the judging. Splendid cat specials are offered, including a $250 oil painting This show is destined to be one of the largest Eastern events with the exception of New York, Boston and Philadelphia. The New Jersey association will coop the show and all are urged to send in their entries at once in order to facilitate matters for the secretary. Mr. Bryan K. Ogden, 31 Highland avenue, Orange, N. J.

Revenue from the Bob-white.

By J. L. Davis, Richmond, Va.

The scarcity of the quail or bob-white in the New England and Middle Atlantic states is carrying the sportsmen of that section south during the hunting season and the poultry and other farms are losing a revenue they should be enjoying. To my knowledge, sportsmen who come South, willingly pay a good fee for the privilege of hunting and as they are practically all capitalists, it is rather beneficial to have them around—might get them interested.

The bob-white, with just a little protection, will multiply remarkably fast. The breeding season is near and every bird killed now will perhaps rob the farm of a dozen or more when the season opens. It's rather funny to think that anyone would kill them in this season of the year, but their tameness during breeding is mighty tempting to the young stroller, with his gun, who delights to take a shot at any and every thing that happens to "jump up"—only intending, of course, to "skeer 'em a little."

The nests, which are always upon the ground, comparatively small, composed of coarse stems of grass arched at the top with the entrance on one side and the eggs promiscuously piled one upon another, are very tempting to the city visitors, when they have the misfortune to find them, as they just can't help picking up one of the eggs to see "what it looks like," and in consequence the nest is entirely abandoned by the birds.

Young bird-dogs should not be allowed to run at large during the summer months, as while roaming about by themselves they are liable to catch the young ones.

Pet cats, foxes and hawks also catch the young. A good idea is to get rid of the cats; get up a hunt every now and then to kill out the foxes and as to hawks, it is hardly necessary to offer any suggestion; whenever they are seen around the farm the farmer should get his gun and endeavor to bring Mr. Hawk to earth.

The bob-white is by no means migratory—indeed, they rarely move to any extent from the spot where they are hatched, even in quest of food, and the land-owner need not be reluctant in giving them a little protection for fear they may desert him.

At the beginning of the hunting season comes the crisis in protecting the bob-white and here let me warn you against the old old story of the neighbor as he walks up to your home with his gun and dog, "just want to kill a few for the family"—this "neighbor," or better termed "pot hunter," will generally kill anywhere from one to eight dozen birds, or as many as he can comfortably carry—rarely ever misses a shot—and makes straightway for the railroad station where he ships the birds to the market and realizes good prices for them. The family may be benefitted by the proceeds but—never see any birds.

It is through the generosity of our good people in allowing these neighbors to kill a few for the family (?) that the bobwhite has become scarce.

In my observations, on the farm "every little helps," and if you can obtain a revenue by allowing the surplus birds to be killed by gentlemen who have an honorable right to be called sportsmen, it is certainly worth your while to afford the bob-white a little protection. It will help the bird as well as yourself.

Richmond, Va.

Choosing the Breeders.

E. M. Long, Osceola, Ind.

Our plans for mating up the breeders should be made early. By now we should have had the culls all disposed for market purposes. The balance that we are holding for sale as breeding stock and other purposes, should be kept apart from the birds we wish to place in our breeding yards. Our males should have by this time shown their colors; they have possibly developed to such a degree that we are able to select the ones we wish to use in the breeding pens, and it is none too early to get them with their mates during January.

In selecting the females for a certain male, we should go over all sections carefully, overlooking nothing that will go to make up a step backward. Our previous experience should be called into play here. Things that we have before found to be a failure should not be repeated. Be careful not to make the same mistake twice. Our famales should be birds free from disqualifications or anything showing signs of same.

First we should choose for typical shape and uniformity as far as possible in shape. Next we would take up color. In some flocks, and in some varieties, especially in the buff varieties, the reds, and so on, we find many different shades of color in the same breeders' yard. In making up the breeding pen, in these colors, we should aim to get birds uniform in color as well as shape, mated to certain males. If the male is a little dark we should select the females that were a trifle light in their first adult plumage; but it is not advisable to mate extremes in color. By a proper blending of such colors, which is only learned by experience, we can get our whole flock more uniform in color throughout. After we have selected a sufficient number as to shape and surface color, we should go over them for under color, color of eye, shape of comb, and everything that will go towards perfecting our chosen varieties and making them more like the ideal which is illustrated in our Standard of Perfection, both by cuts and word pictures.

If we aim at high quality we cannot be too strict in this mating up of the sexes. Better a small pen properly mated with no culls or birds that will throw culls, than a large one of poorer quality.

It is well to keep back several cockerels in reserve, in case of accident or other reasons, then we are prepared to substitute something in the male line of which we may be reasonably sure of the quality they will produce. One can mate more intelligently if one knows the pedigree and the characteristics of the stock back for two or three generations. Everything that may have a future bearing on the quality, vigor and utility of the flock should be taken into consideration. Birds that are not vigorous and healthy, full of activity and life, should not be considered. Even after we have the pens made up to the best of our ability, it is sometimes advisable to make changes. Each breeding season should be a lesson to the fanciers. If a strict account is kept of the offspring from each pen we are able, when this offspring attains maturity, to reason out in our own mind, by a system of cause and effect, where we have made errors and where we have made the lucky hits. This knowledge gained from year to year is what makes success in the fancy poultry business sure. There is more honor and satisfaction in breeding one good bird than in winning the blue with a bird that is the result of some other man's knowledge properly applied.

The National Rose Comb Rhode Island Red Club.

The annual meeting of the National Rose Comb Rhode Island Red Club was held at Mechanics' Hall, Boston, Mass., January 14, 1909, in connection with the Boston Poultry Show, and the following officers were elected for the ensuing year: Daniel P. Shove, Fall River, Mass., president; I. W. Bean, South Braintree, Mass., vice-president; W. F. Burleigh, Larrabee's Point, Vt., secretary-treasurer.

It was voted that the secretary be authorized to expend money for advertising the club and to use every effort to promote the interests of the Rose Comb Reds and the club.

Send $1 to the secretary to cover membership fee and annual dues, and participate in the benefits that are bound to follow the advertising campaign.

The assistance and hearty co-operation of every Red breeder is earnestly requested by the secretary.

W. F. Burleigh, Sec.,
Larrabee's Point, Va.

The meeting of the American Jacobin Club was held at Madison Square Garden, New York, January 1, 1909. After routine business was disposed of Messrs. John Waters and John Reid were proposed and unanimously elected life members of the club. The following officers were elected for the ensuing year: President, H. R. Forshay; vice-president, C. E. Visel; secretary-treasurer, F. W. Gorse. Members present, Hoskins, Visel, Donovan, Hyde, Koehler, Ulrich and Winsor.

F. W. GORSE, Secy.

Tracing the Ancestry of Fowls

(Continued from page 286)

All fowls selected for the show ring are fed with the prize idea in view and trained to be handled. The sexes are separated and the most nutritious feed obtainable is given them, and yet they are fed with great caution.

The day before shipping, final preparation is made. The plumage is carefully washed and the feathers given a nice appearance. The beak and legs are cleaned and with a soft sponge the wattles, face and comb are cleaned. Many exhibitors undoubtedly attempt the so-called mysteries, but fanciers who exhibit successfully generally send their birds way with no more preparation than is necessary to make them clean, healthy specimens, and up to the standard of perfection.

The greatest enemy of the poultry fancier is dirt, and no trouble is spared in keeping the fowl in a well ventilated, clean and healthful place. Diseases are ever prevalent, even among fancy fowl, and they require constant attention and watching in order to promote health. All ailing ones and weaklings must be weeded out and barred from breeding, to prevent mortality in the offspring.

Most all natural instincts are lost under domestication. A most remarkable instance of this is seen in those breeds of fowl which rarely or never become "broody," that is, never wish to sit on their eggs. But there is one which the fowl will ever be in peril of. That is the fear of the hawk. This enemy is not the only source of trouble to the poultry keeper, for the weasel, mink, fox, skunk and wild cat are equally predatory. I know of one case where a weasel killed over fifty young chicks in one night and another case where a mink killed twenty-five cockerels before he was caught. Disasters of this kind are what dishearten the ordinary breeder, and unless he has bulldog tenacity and grit, he is ready to give up and go out of business. The expense involved and indefatigable efforts expended toward success seem incredible, and years of unflagging labor often result in failure.

Start Your Chicks with the Right Kind of Feed and Keep Them Going

The chicks that start to grow right from the start are the ones that make the fine fowls. See that they get something their weak stomachs can digest.

Feed Little Chicks Can Digest

Darling's Chick Feed

Avoids Little Chick Troubles. No Waste

is afstarting and a growing feed. It is just the right size and all digestible. It's a ood that makes healthy chicks, because they get the benefit of what they eat.

Improper feeding is responsible for the most of the little chick troubles. Chicks fed on Darling's Chick Feed have the best chance to escape sour crop, indigestion, bowel complaint and diarrhoea.

All prices quoted on Darling Foods are for 100-lb. bags, F. O. B. Chicago or New York. Cash with order.

Common-Sense Poultry Doctor

Every agricultural college and experiment station, every recognized expert authority, unhesitatingly admits, that this is the greatest book on poultry diseases and their treatment that was ever published. It is completely supplanting the old works and is rapidly becoming adopted as a text book by every institution where poultry keeping is taught.

One Professor Emphatically Remarks

"At last we have a book on Poultry Diseases and their treatment which not only covers the subject completely in a practical common sense manner, but also provides for the correct identification of diseases by the non-professional which I consider a vitally essential feature."

Its 16 chapters, covering 176 pages, embrace the very best tested and proven methods of treating sick and injured fowls. Its author is John H. Robinson, editor of the great eastern monthly, Farm Poultry. Mr. Robinson has drawn from every valuable source of reliable information, which, coupled with its own wide and varied experience, has resulted in what pleased purchasers enthusiastically proclaim as "the greatest ever." The price is 50 cents, all postage prepaid, and it is sold under an absolute guarantee of money back promptly if dissatisfied. This book is something every poultry keeper absolutely needs and it will save him many dollars in breeding and exhibition stock in the course of a year. Send post office or express money order cash or stamps.

Farm-Poultry Pub. Co. Room A. Boston, Mass.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

BOSTON, 1906, We judged the Houdan exhibit and since then we have not shown, giving our customers the benefit of our experience in breeding winners.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PEMBROKE, MAINE
President American Houdan Club, From 1900 to 1907.

HOW TO GET EGGS IN WINTER

Push Your Hens This Winter

They are worth to you just what you get out of them. You can let that be little or you can make it much. You are keeping the hens for the eggs they will lay. Then why not start in with the determination to handle them right and get every egg that it is possible to get and make your profits something worth while?

Darling's Laying Food

is used by most of the truly successful poultry raisers—you should use it also. Its reputation is established. It *does not work miracles*, it will *not* make your hens lay an egg a day; but it *does* contain egg-making ingredients in right quantities, it *does* promote laying, and it *does* get the very best results from every hen that she is capable of giving.

Don't you want to start in the winter with a food that fits the need of your hens, a food that induces laying in cold weather, a food scientifically prepared, a food that will pay for itself over and over in the greater number of eggs you will get? Then use Darling's Laying Food

In 100-lb. Sacks, Price $2.00
f. o. b. Chicago or New York

Darling's Scratching Food, Chicago - -	$2.00	Darling's Mica Crystal Grit	$ .65

The American Fancier

VOL. XXXVIII NEW YORK CITY, FEBRUARY 15, 1909 No. 721

Wanted---Honest Men.

Greek history tells us that on a certain day, a man was discovered walking the streets in broad day light with a lighted lantern in his hand, When asked why he carried the lighted lantern, his reply was that he was looking for an honest man. This man was that great philosopher, Diogenes, and that was his peculiar way of saying that honest men are very hard to find.

What is an honest man? The dictionary says "One who is fair and candid in his dealings with others."

WANTED—HONEST MEN. If you read the papers today you can see that sign written all over the pages. That doesn't mean we want honest men only to run the politics of the country, or only to run the banks of the country. It means we want honest men to run everything, from the little peanut stand on the corner up to the Executive Department of the United States.

The man who fakes his birds for exhibition and sale purposes is no better than the man who sells fourteen ounces of sugar for a pound.

There has been much discussion lately in regard to the amount of grafting done in the building of the capitol at Harrisburg; and yet the same man who condemns the Capitol Grafters and says they got no more punishment than they needed, will go home and show a prospective buyer a bird which took the blue ribbon at a certain poultry show and say nothing of how many off colored feathers he pulled out, how much peroxide he used on him, or how many side sprigs he trimmed from his comb. That man is just as much a grafter as the man who charged the Pennsylvania State Government one thousand dollars for a chair that cost him fifty. He is selling his customer a seventy-five cent chicken for ten, twenty, thirty, forty or fifty dollars. He is a detriment to his customer, to the poultry business at large, and to himself.

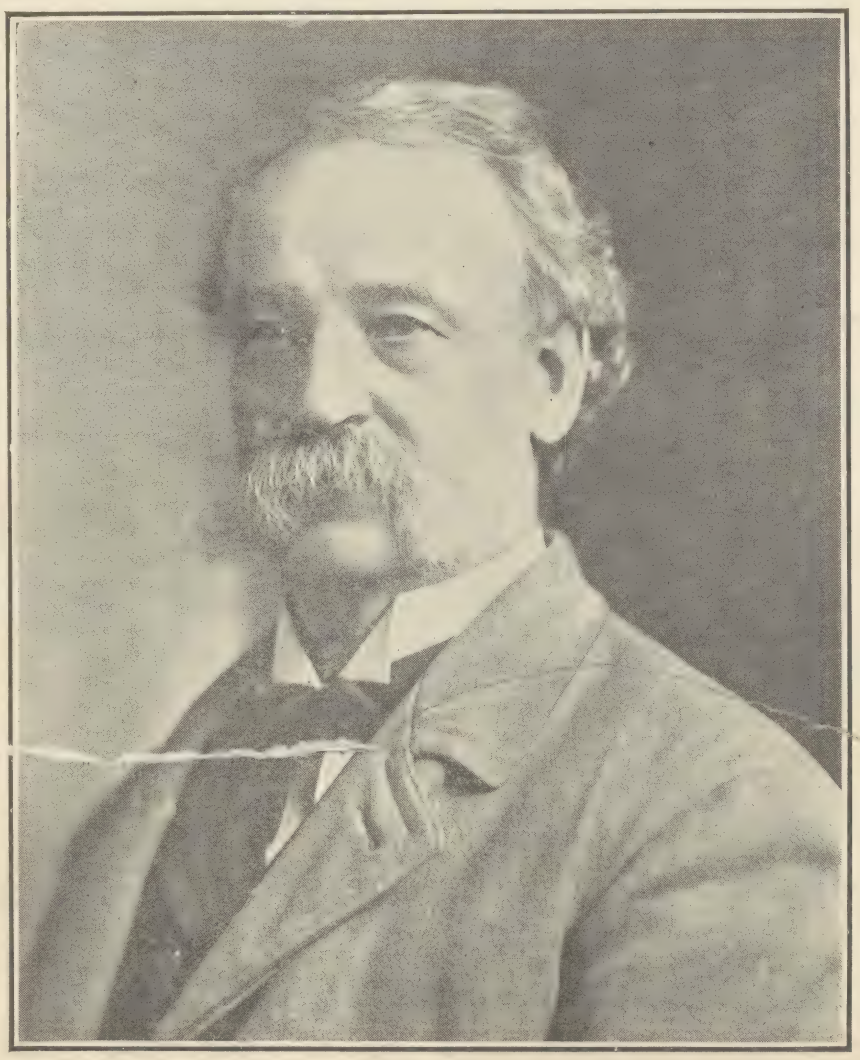
What is the use of breeding thoroughbred poultry at all if we are to have such practices to contend with in the show room and among our competitors?

Any boy can go out through the country and pick up any number of mongrels he wants at ten and twelve cents a pound and with a little time and labor make pretty good Plymouth Rocks or Wyandottes out of them, but it takes a man, and an honest man at that—not a faker—to breed good thoroughbred stock and sell it for what it is and has been from the time it came out of the shell.

We are not in the poultry business for the sake of winning the blue with birds that have been trimmed and plucked and bleached; but to raise the standard of the different breeds, make them better fowls, and incidentally make an honest living.

Such methods do not raise the standards; they lower them; they do not make better fowls, they make poorer fowls; they do not make an honest living; they make a dishonest living temporarily and spell final disaster to the man who uses them.

WANTED! HONEST MEN IN THE POULTRY BUSINESS—NOT FAKERS.



Some Theory About Breeding.

Wrong ideas prevailing among poultrymen. Good lessons can be drawn from a better Understanding of the scientific aspect of the subject.

By C. Grandpierre, Columbia, Mo.

It would hardly be advisable to publish, in a popular poultry journal, a scientific digression on the various theories of evolution and the laws that are thought to govern heredity. A brief review of the scientific aspect of these questions is though here in place, the more as most breeders on poultry breeding do not seem to have heard of anything else but Mendel's law and this so superficially and imperfectly that the well defined Mendelian principles are worn and torn in such a manner as to be unrecognizable.

Long before Darwin, theories on evolution and schools on heredity existed.

GEO. O. BROWN, Baltimore, Md. Secretary of Baltimore Show.

Some of the principles governing heredity were known already by the ancient Greeks and the Romans, and probably also by still older, now disappeared civilizations. One need only to remember the Spartan law, punishing with banishment the weak and diseased who dared to marry and the Roman custom to dispose of weak children by throwing them from the Tarpeian Rock.

Until Darwin, the large amount of heterogeneous knowledge on the subject had not been classified. To the English physician we owe the first well defined theory on evolution of species. Though it has been abused, criticised, ridiculed and even anathemised beyond measure, it is still the base of all of the breeding done today.

The only theory which has materially affected Darwin's theory is that of "saltatorial evolution," better known as "mutations theory," of the Dutch botanist, Hugo de Vries. According to Darwin, evolution is slow, but constant. According to de Vries, the too slow Darwinian evolution is helped out by occasional jumps, suddenly appearing sports (mutations), these sports ultimately forming new types within the variety then new varieties and ultimately new races.

The main difference between both is that Darwin explains the formation of new species by slow evolution, by a long chain of possibly very minute variations due to varying environment and the survival of the fittest, while de Vries, without denying the correctness of every part of Darwin's theory, believes that new varieties and even new species are often originated by "sports."

In practice, the breeding by Darwin is a continual, never ending, laborious selection (natural or artificial) in a given direction, while by de Vries, even in pedigree breeding, room is left for chances, or sports which (at least in self polenizing plants) reproduce themselves true and constant, until new mutations appear or until they are thrown out of line by cross fertilization.

Before going further we have to make brief mention of the two systems of laws which are thought to govern heredity.

Galton, like Darwin, reduced the probabilities of variations to a simple rule of arithmetic. He speaks of an alternative heredity illustrated by the color of the parents' eyes. One parent may have light, the other dark eyes. The probabilities are that there will be progeny with medium eyes. The dark and light colored eyes will be about equally divided among the progeny, this because:

2 parents control 50% of the progeny.

4 grandparents control 25% of the progeny.

8 great grand parents control 12½% of the progeny, and so forth.

According to Darwin's theory, supplemented by Galton's law, we should never fail to obtain the desired results, and all what we have to take care of, is not to make any miscalculation.

On the other hand what is Mendel's law?

Mendel, an Austrian monk, died 1884. He made numerous now classic breeding experiments with garden peas and published his observations and conclusions in an obscure journal 1858-1865. He and his work remained ignored to the world until "discovered", almost simultaneously by several investigators. His experiments were repeated and his deductions found correct, among others by de Vries. They have been since promulgated as Mendel's law, nearly 40 years after their first publication.

Contrarily to the prevailing belief in poultry circles, Mendel did not set up a system of mathematical probabilities in heredity. According to his law there is not an alternative (as we find it by Galton), but a "predominant" and a "recessive" character in every progeny. These characters are due to latent powers, which have originated way back in the ancestry.

We all know by experience that the tendency of the average progeny is to revert to the mean of the race or variety and we obviate this revertive tendency by selection. That's the recessive character of Mendel. It is irregular, sporadic in its appearance.

The "predominant" character is that of a "sport," or of a de Vries mutation. It is, so to say, the expression of the tendency of the living cell to progress to more perfect forms, in constant struggle for supremacy with "reversion" or the return to lower forms.

This predominant character, according to Mendel, is the one we have to look for in breeding, similarly to the look out for de Vries' mutations. By proper care this "predominant character," like the "mutations," will breed constant and give us new varieties and new races.

We so have seen, on the one side, Darwin and Galton laying down theories and principles, according to which evolution moves into mathematical exact lines; on the other side, Mendel and de Vries, leaving room for sudden changes, due probably to suddenly reappearing latent characteristics, which may have been dormant for many generations.

As far as theory and the laying down of principles is concerned, the two "schools" on evolutions and the two "laws" on heredity mentioned above are all we have in the way of scientific material to work on. Practice, which is not always in accord with theory, on the other hand, has shown us which are the best systems or methods of breeding and of selection. For years thousands of stock, plant and poultry breeders have been working very very hard, selecting and breeding according to scientific theories and laws. Some little results have been obtained, but surely, the sum total of progress is not very encouraging.

We may perhaps find a key to our comparative success and to future progress, in investigating briefly the magnificent work done by the Swedish Grain Growers' Association." Some twenty-five years ago this society begun seed farming and experimental breeding solely as a matter of business. They worked for years according to the then present so-called German breeding method, based on Darwinian and Galtonian principles. At the appearance of de Vries mutation theory they also tried that, with not much more success. After years of work on a scale never dreamed of before and never attempted

(Continued on page 296)

The Philadelphia Show

The third annual exhibition of the Philadelphia Poultry, Pigeon and Pet Stock Association was beyond all doubt the greatest mid-winter poultry show ever held in the Keystone State.

The show in size and quality was far superior to that of 1908, and the attendance, much larger than former years. Philadelphia is now looked upon as one of the leading shows of the country.

The Second Regiment Armory, was taxed to its utmost to accommodate the birds and the crowds who attended the exhibition.

CARLISLE AWARDS:

Special for the best exhibition pen in the show was won by George L. Hoffman, with pen of S. C. Black Orpingtons. Special for best display, one variety, won by Charles Frederick, with Columbian Rocks. Special for best cock, hen, cockerel and pullet was won by George James, with Dark Brahmas. Special offered for best pair shown by woman exhibitor was won by Mrs. William G. Minich, with pair of W. C. Black Polish. Following is a list of the awards:

BARRED ROCKS—G. W. Stump, 1 ck., 2 hen, 1 ckl., 1 pul.; Dr. Phillipy, 2 ck., 1-3 hen, 3-4 ckl., 2-3 pul., 1-2 pen; Mr. Wingert, 3 ck.; C. F. Leven, 4 ck., 5 hen, 2 ckl.; Mrs. Minich, 4 hen. WHITE ROCKS—C. F. Leven, 3-4 hen; Shinabrook & Spital, 2 ckl., 1 pul.; Dr. Phillipy, 1 ck., 1-2 hen, 1-3 ckl., 2-3 pul., 1 pen. BUFF ROCKS—W. C. Drager, 1 ck., 1 hen, 1 ckl., 1-2 pul.; C. Hummel, 2 ckl., 3 pul. COLUMBIAN ROCKS—C. Frederick, 1-2-3 ck., 1-2-3 hen, 1-2-3-5 ckl., 1-2-3-4-5 pul., 1-2 pen; W. C. Drager, 4 ckl.

GOLDEN WYANDOTTES — J. W. Rhoads, 1 ck., hen, ckl., pul. SILVER WYANDOTTES—G. Guignet, 1 ck., 1 hen; Mrs. Minich, 2 ck., 2 hen; J. C. Ahl, 3 hen, 1-2-3 ckl., 1-2-3 pul., 1-2 pen. WHITE WYANDOTTES—G. B. Cook, 1 ck., 1 ckl., 4 pul.; Mrs. Brubaker, 2 ck., 1 hen, 1 pul., 1 pen; Dr. Phillipy, 3 ck., 2-3 hen, 3 ckl., 2 pul., 1-2 pen (old and young); M. O. Sides, 4 ck., 4 hen, 2 ckl., 5 pul. BLACK WYANDOTTES—O. A. Orr, 1 ckl., 1 pul.; Mrs. Minich, 1 hen, 2 pul. COLUMBIAN WYANDOTTES — G. B. Cook, 3 ckl., 1 pul.; Mrs. Minich, 2 ck., 2 hen; W. Frederick, 1 ckl.; H. Cart, 2 ckl., 2-3 pul.; H. C. Barnhart, 1 ck., 1 hen; A. Nickey, 4 ckl., 1 pul. WYANDOTTES—Harry Cart, 1 ck., 1-2 hen; C. Hummel, 3-4 hen, 1 ckl., 1-2 pul., 1 pen.

R. C. R. I. REDS—Mrs. Minich, 3 hen; J. W. Hefflefinger, 1-2 ckl.; W. A. Rinlaub, 1 ck., 1-2 hen; Mr. Charlton, 3 ckl., 1 pul. S. C. R. I. REDS—Mrs. W. P. Hankins, 2 ckl.; G. L. Kort, 1-3 ckl., 1-2 ck., 1-2 hen, 1-2 pul., 1 pen; Mr. Charlton, 3 pul.

LIGHT BRAHMAS—L. Dougherty, 1 ck., 1 hen, 1 ckl. DARK BRAHMAS—Mrs. Minich, 2-3 hen; G. James, 1-2 ck., 1-4 hen, 1-2 ckl., 1-2 pul., 1 pen.

PARTRIDGE COCHINS—Mrs. Minich, 1 ck., 1 [illegible]

BLACK LANGSHANS—S. Franciscus, 1-2-3 ck., 1-2-3 hen, 1-2-4 ckl., 1-2-3-4-5 pul., 1-2-3 pen (young), 1 pen (old); H. Minium, 3-5 ckl. WHITE LANGSHANS—J. Franciscus, 1 ck., 1 hen, 1 ckl., 1 pul.; C. Weightman, 2-3-4 ckl., 2-3-4 pul., 1 pen.

R. C. BROWN LEGHORNS—Mrs. Minich, 2 hen; H. C. Barnhart, 1 hen, 2 ckl.; A. Armstrong, 1 ck., 1 ckl. S. C. BROWN LEGHORNS—D. McLean, all first and second prizes. R. C. WHITE LEGHORNS—H. C. Barnhart, 1 hen. S. C. WHITE LEGHORNS—J. Reiff, 1 ck., hen, ckl., pul.; E. H. Keefer, 2 ckl.

R. C. WHITE MINORCAS—E. H. Keefer, all first and second. S. C. BLACK MINORCAS—G. Guignet, all premiums. R. C. BLACK MINORCAS—R. S. Dittman, all firsts. S. C. WHITE MINORCAS—Shinabrook & Spital, 1 ck., hen, ckl., pul.; Mrs. M. Wingert, 2 ck., 2 hen, 2 pul.

BLACK SPANISH—R. S. Dittman, all firsts.

BEARDED GOLDEN POLISH—Mrs. W. G. Minich, all firsts and seconds. BEARDED SILVER POLISH—Mrs. Minich, all firsts. PLAIN GOLDEN POLISH—Mrs. Minich, all firsts. PLAIN SILVER POLISH—Mrs. Minich, all firsts. W. C. BLACK POLISH—Mrs. Minich, all firsts. WHITE POLISH—Mrs. Minich, all firsts. BUFF LACED POLISH—Mrs. Minich, all firsts.

S. C. BLACK ORPINGTONS — G. L. Hoffman, 1 ck., hen, ckl., pul., pen. BUFF ORPINGTONS—C. F. Leven, 1 ck., hen.

ALL VARIETIES HAMBURGS—Mrs. Minich, all firsts.

REDCAPS—G. Guignet, 1 ck., hen, pul.

CREVE-CŒURS—G. Guignet, all premiums.

LA FLECHES—G. Guignet, all premiums.

SILVER GRAY DORKINGS—Mrs. Minich, all firsts. WHITE DORKINGS—G. Guignet, all firsts.

HOUDANS—G. Guignet, 1-2-3 ck., 1-2-3 hen, 1-2-4 ckl., 1-2-3 pul., 2 pen; D. McLean, 3 ckl., 1 pen.

CORNISH INDIAN GAMES—R. S. Dittman, 1 ck., 1 hen; W. L. Kuhns, 2 ck., 2 hen, 1 ckl., 1 pul. WHITE INDIAN GAMES—S. Bigler, 1 ck., 1-3-4-5 hen; Mrs. Minich, 2 hen.

ANCONAS—G. Guignet, all firsts and seconds.

LIGHT BRAHMA BANTAMS — Mrs. Minich, 2 hen, 1 pul.; C. Fitzpatrick, 1 hen. DARK BRAHMAS—Fitzpatrick, all firsts.

R. C. BLACK—Fitzpatrick, 1 hen, 1 pul.

WHITE INDIAN GAME BANTAMS—S. Bigler, all firsts and seconds.

GOLDEN SEBRIGHT BANTAMS — C. Fitzpatrick, 1 ck., 1 hen; C. Leidig, 2 ck., 2 hen, 1 ckl., 1 pul.

BUFF COCHIN BANTAMS—C. Noble, 1 ck., 1-2 hen; J. Franciscus, 1 ckl., 1 pul.

PARTRIDGE COCHIN BANTAMS — C. Fitzpatrick, 1-2 ck., 1-2-3-4 hen, 1-2-4 ckl., 1-2-4 pul.

FRIZZLES — Mrs. Minich, 1 hen; W. Frederick, 2 hen.

SILKIES — J. Franciscus, 1 hen; G. Guignet, 2 ck., 2 hen; Mrs. Minich, 1 ck.

Some Theory About Breeding

(Continued from page 295)

since, practically no results had been obtained.

Enabled to do so by his large experience and knowledge of varieties the then director, N. P. Nielsson (not to be confounded with the Dane, P. Nielsen) discovered that every so-called pure variety was in fact nothing but a mixture of a multitude of types. He set himself to work to find out the "elementary type" of each variety and to breed from this elementary or pure type. The results were surprising and today, it can be said, as far as grain breeding is concerned, that as soon as the elementary type has been isolated the improvement of the variety along any desired lines presents no difficulties.

The greatest value of Nielsson's work has been not only to show us the importance to make a start with an absolutely pure strain, but to open our eye and to prepare us for an entirely new field of investigations. It has shown us the reasons of the failure of the so-called Hallett system of always selecting only the best grain of the best ear for breeding. It has shown us the omnipotence of the ancestry, the necessity to select seed corn in the field and not in the crib. All of that because, in breeding, we have to reckon about the latent powers of the parents, originating in the ancestry; because a single grain or a single individual does not tell us anything about these latent powers, while an examination of a whole family may give us more indications as a single individual. In one word, the plant breeder is now working with the true (not fancied) Mendelian principles of the predominant character, in watching for the predominant character not in one single characteristic, not even in one single individual, but in one whole family.

Readers will please excuse this digression on plant breeding. It was necessary as material for comparison.

If we need any proof that the same principles apply to poultry breeding we have only to compare, on the one side, the little progress accomplished by the thousands working along general lines, and, on the other side, the success obtained by the few who have, may be unconsciously, succeeded in isolating an elementary type and in forming a distinct type or strain.

Above lines will probably not be according to the heart's desire of many promoters of breeding systems and of pet schemes of mating. They are though, strictly in accord with the results of modern investigation on evolution and heredity.

The aim of the writer will be accomplished if he has succeeded in awakening interest and provoking a serious discussion of the subject.

Greider's Book on Poultry

Illustrates 60 leading varieties; contains fifteen attractive chromos. Directions for care of fowls, building houses and equipment, increasing egg production, preventing disease, etc. Simple, concise, easily understood. All poultry supplies at reasonable prices. This valuable book, postpaid, **10c**

Greider's Germicide is a safe, certain cure for lice and other insect pests. Is also an excellent disinfectant—prevents spread of disease.

B. H. GREIDER, RHEEMS, PA.

PIGEON BANDS

ALUMINUM OPEN; 12, 20c. 100, $1
SEAMLESS, 12 for 25c. 100 for $1.25
Six Samples, 10 cents

HARRY E. BAIR, A F, HANOVER, PA.

PIGEON DISPLAY AT GREAT ROCHESTER SHOW

The display of pigeons at the Great Rochester Show, just closed, was a great success; about 600 competing for honors. Some fine specimens of all varieties were shown.

On Pouters, the honors were divided between John F. Voss and John Knack, of Rochester, and Constant Marriotte, of Syracuse, and the birds shown, were of a high standard.

On Pigmy Pouters the honors were divided between Constant Marriotte, of Syracuse, and J. Knox, of Buffalo, and an unusually large string of good birds in both old and young classes were shown in the various colors.

Dragoons brought out the hotest class in the show, about fifty birds competing; among them being several winners at New York. Everything considered, the display on this variety was of a very high class. Honors were divided between Joseph Kircher, John Voss, Frank Uhl, Frank E. Carrol, Constant Marriotte and Wm. Russel.

Swallows also showed a very hot class. Sixty birds being shown; Barless and white barred being well represented. Mr. Henry Uhl, of Rochester, being represented by an unusual strong string of blacks. Mr. Aug. Eckert with a large string of yellows, Messrs. Cook, Paolone, Erhardt showing a fine string of white barred snipe swallows in all colors. Rochester seems to be the home of a fine, large bunch of swallows.

Turbits were a small class, but good, and were shown by John Voss and Fred. G. Holroyd.

Owl were an unusually fine class, Mr. H. A. Irrig winning almost everything as usual.

Tumblers were well represented, and of a very high class, honors being divided between Messrs. Ward, Planner and Voss of Rochester, Howard Young of Buffalo, and Constant Marriotte and Clarence A. Davis of Syracuse.

Jacobins also showed up fine; Brown & Hill, of Rochester, carrying off first honors.

Magpies to the number of twenty-five were shown by Messrs. Knox, Cook, Stewart, Voss and Russell.

Fantails were a nice class, also working homers, see awards below.

German Toys were well represented, a fine collection of the different varieties being shown by Mr. Frank Cook of Rochester. His fine frillbacks, muffed mooreheads, ice pigeons, nuns, priests, Quakers, straussers, etc., deserve special mention.

Belgian Carneaux were well represented by Mr. Richards of Lyons, N. Y., and F. E. Barnard of Honeoye Falls, N. Y.

List of Awards:

BLACK POUTERS: Cock—1st, Constant Marriotte. Hen—1st, Constant Marriotte. Cocks, 1908—1st, John Knack; 2d, John Voss. Hen—1st, John Voss.

BLUE POUTERS: Cock—1st, John Voss; 2d, John Knack. Hen—1st, John Knack. Cock 1908—1st, John Knack.

RED POUTERS: Cock—1st, John Voss; 2d, John Knack. Hen—1st, John Voss; 2d, John Knack. Cock 1908—1st, John Voss; 2d, John Knack. Hen 1908—1st, John Voss; 2d, John Knack.

YELLOW POUTERS: Cocks—1st, John Voss; 2d, John Knack. Hens—1st, John Voss; 2d, John Knack.

WHITE POUTERS: Cocks—1st, John Voss; 2d, John Knack. Hen—1st, John Knack. Cock 1908—John Knack. Hen 1908—John Knack.

WHITE ROCKS AT "FISHELTON" HOPE INDIANA

(Continued on page 298)

Buff Leghorn Club Meeting

The annual meeting held at Madison Square, New York City, December 31, was fairly well attended. The standing of the club was found in good condition, it being one of the clubs that drops membership when dues expire, carrying none but live members.

It was carried that extra efforts be made in offering special prizes at the shows next year, and that ribbons be offered at every show in the United States and Canada, the quality being better than offered by many others.

The following officers were elected:

President, F. W. Tecktonius, Racine, Wis.; Eastern vice-president, J. C. Punderford, Freneau, N. J.; Western vice-president, O. M. Robbins, Santa Ana, Calif.; Middle vice-president W. M. Bean, Anoka, Minn.; Southern vice-president, Rob't P. Adams, Lynchburg, Va.

Secretary and Treasurer, Geo. S. Barnes, Battle Creek, Mich.

Executive Committee, Thomas Peer, Pairfield, N. J.; Nate K. Cornwall, Thamesville, Ont., Can.; Rodney A. Knapp, Binghamton, N. Y.

Honorary vice-presidents, E. Jeffries, Toronto, Ont.; Sid Saunders, Guelph, Ont.; W. Walker, Barquitland, B. C., Canada; M. Johnson, Morgan Park, Ill.; George Demlow, Elgin, Ill.; T. J. Walp, Quakertown, Pa.; Geo. H. Bicker, Cabot, Pa.; Wm. P. Campbell, Bloomfield, N. J.; O. H. Quentin, Clifton, N. J.; Wm. L. Krepps, Grand Rapids, Mich.; John Schoberth, Saginaw, Mich.; Len Lanius, College Hill, Ohio; Sylvester Shirley, Port Clinton, Ohio; L. W. Rankin, Tiffin, O.; P. S. Hurt, Thornton, Ind.; J. C. Eisenmann, Greenburg, Ind.; J. C. Thurman, Richmond, Ind.; Miller Bros., Fern Hill, Wash.; J. C. Wetzel, Burlington, Wash.; J. H. Broderick, Middletown, Conn.; E. E. Lord, Rocky Hill, Ct.; Lelgemann Bros., Springfield, Mass.; Geo. Walker, Chillcothe, Mo.; John W. Stouffer, Orrick, Mo.; Wm. Ewald, Jr., Medina, N. Y.; E. A. Miller, Machias; B. S. Beuerlein, Mt. Morris, N. Y.; M. W. Beardsley, Englewood, Colo.; Mrs. B. F. Jackson, Eminence, Ky.; Josiah Fitz, 4th, Chester, N. H.; Arden F. Coulter, Concord, N. H.; R. S. Currier, Barre, Vt.; A. T. Lindgren, Kingsbury, Calif.; John H. Holbrook, Bartlett Springs, Calif.; Wm. H. Edeler, Bel Air, Md.; H. L. Haff, Beloit, Wis.; Harry D. Dunbar, Elkhorn, Wis.; E. L. Wilson, Columbia, Tenn.; Mrs. C. B. Campbell, Asheville, N. C.; M. A. Henry, Bonaparte, Iowa; C. L. Phillips, The Dalles, Oregon; G. E. Longeway, Great Falls, Mont.; L. P. Harris, Clay Center, Neb.; Jas. M. Hughs, Richmond, S. C.; J. N. Coffman, Edinburg, Va.; John D. Ellis, Granby, Quebec, Can.; W. Nixon, Winnipeg, Man., Can.

The secretary of the Club has a few of the late catalogs left, which will be sent free for the asking. It is 56 pages of good reading matter.

Entered as second-class matter August 2, 1907, at the post office at New York, N. Y., under the Act of Congress of March 3, 1879

March 1—A Bantam and Pigeon Special

Unusual interest has been aroused and is keyed up to the highest pitch and we feel sanguine our Bantam and Pigeon Special, of March 1st, will be one of the best and handsomest issues that has ever been published in the interests of Bantams and Pigeons. We are receiving many letters from all parts of the country from Bantam and Pigeon breeders. In every instance they indorse the Special issue mentioned above and speak of the movement in glowing terms. Thus, we are firmly convinced that the poultry press has ignored the Bantam and Pigeon end and has done little, if anything, to assist the remunerative branch of the industry. Thousands and thousands of dollars are invested in Bantams and thousands of fanciers are interested from a fancy standpoint. Now we solicit the support of every Bantam and Pigeon breeder in the country. Don't stand by depending upon the other fellow. Put your individual shoulders to the wheel and help make this issue the greatest, possible success.

We are anxious to advise our Bantam and Pigeon patrons that we are willing to do our part, which we will gladly do. We want to make **The American Fancier** the most popular Bantam and Pigeon journal in the country. However, without your support and cooperation, we can do little or nothing. We are doing all that we possibly can to make the Bantam and Pigeon issue an issue that will be kept on file as a reliable authority, for many years to come. Now, Mr. Bantam and Mr. Pigeon breeder—show your true colors if you want a publication that will be a credit to the Bantam and Pigeon fanciers. Let us hear from every one of you; write us an article; send us some illustrations and a line of your business. Do not delay but write immediately.

We would like very much to double our circulation and we are going to ask our friends to jump in and assist the good work. We are firmly convinced that every bit of honest labor is worthy its reward, thus, we will extend your subscription for one year if you will but send us one new subscription. Will **You** do this for us and for the fancy?

* * *

The show season is now about over and notwithstanding the recent financial panic, this has been the most successful season the fancy poultry industry has ever experienced. In almost every instance the entries at branches. From reliable sources we all the shows were larger than last year and the average attendance far ahead. No, the financial depression did not materially injure the poultry business in any of its various branches. From reliable sources we are advised that the coming season will prove even better than the one just passed.

* * *

During the past few months we have been somewhat handicapped in getting **The Fancier** out on time, owing to the numerous complications that arise in the transfer of a publication. However, we can now assure our readers that in the future that **The Fancier** will be more prompt, and it is our intention to make it the leading fanciers' paper—covering everything the word "fancier" implies. We now ask the cooperation and loyal support of our readers; we urge them to assist us, and we will make **The Fancier** a "lime-lighter" in every sense of the word, just as we did the "Poultry Item," **The Fancier's sister** publication.

We wish to advise our patrons that the columns of **The American Fancier** are at their disposal. We want you, Mr. Poultryman, to contribute to its columns. If you have succeeded in the poultry or pigeon business, tell us how you did it—what methods you employed; your experiences will be interesting; they will help and encourage the embryo and others less fortunate and experienced. We are not especially anxious to secure space writers—contributors who make a business of writing at so much per 1000 words; we desire contributors who raise, feed and care for their own stock—who know the practical side of the story and even of they are not especially gifted, from a literary point of view, our editor can polish up their contributions—just as long as they contain "meaty" and good, plain, straight-from-the-shoulder facts. Men of this calibre are the sort we are anxious to hear from.

* * *

And now the egg selling season is at hand. During the next few months our many readers, thousands of them, are going to spend hundreds of dollars for eggs and stock. We desire to call the attention of our readers to the special combination offer below. When many of our advertisers who use and have used our classified advertising columns send us unsolicited testimonials advising us that they have sold stock and eggs amounting to many hundreds of dollars, and just from a classified advertisement at that, we feel that this should be ample proof that **The American Fancier** is a wonderfully clever advertising medium—a puller that has evinced pulling qualities that the small advertiser cannot afford to ignore. In view of this fact we feel that we, prompted by no mercenary motives whatever, are justified in asking you, for your personal advantage, to very carefully read the following offers:

IT IS WORTH GOOD HARD CASH

OFFER No. 1: 30 word classified adv., 3 months, 6 times and a year's subscription to **The American Fancier** for **$2.50**—Regular price $3.60.

OFFER No. 2: 30 word classified adv., 6 months, 12 times (one change of copy) and a year's subscription to **The American Fancier** for **$4.00**—Regular price $5.

OFFER No. 3: 30 word classified adv., 1 year, 24 times—$8.00

OFFER No. 4: A four year's subscription to **The American Fancier** for $1.00

OFFER No. 5: A year's subscription to **The Poultry Item** and **American Fancier** at 75 cents.

The Flemish Giant

By Editor Plath

The Flemish Giant—beyond all doubt the largest member of the rabbit family, is a very interesting breed—is readily handled and easily bred, being an artificial variety. The main object in breeding Flemish Giants is to get them large. In Europe they are bred mostly for market purposes, being very excellent for the table and a great delicacy.

For exhibition purposes the Flemish Giant is a very popular rabbit. In Europe it is raised somewhat larger than in this country. Just why this is so I am unable to state; I am under the impression, however, that the European climate is more conducive to their rapid growth. In all my experience with the "Flemish"—and I have bred them many years, I have never been able to raise specimens as large as those seen on the other side. Some time ago I imported two pair of Flemish Giants from Germany. One of them was ten months old and weighed 13 pounds on arrival; now it is 14 months old and weighs 17 pounds. I imported these specimens solely for the purpose of breeding and experimenting; I was anxious to see if it would be possible to raise them as large in America as is the conventional custom abroad. In the autumn I will tell the readers of this department how I succeeded.

Three years ago I noticed an article in one of the Amrican class journals which described the Flemish Giant very thoroughly. However, the writer stated that he had succeeded in raising specimens that weighed 12 pounds each—an average weight, when three months of age. For the life of me I cannot conceive how this could be accomplished. I am firmly convinced that the writer made a mistake when weighing them. Possibly his scales were not accurate. This would be the kindliest view to take of the matter. I do not think an experienced writer should endeavor to color anything when preparing an article for publication. Beginners are easily misled and then, when they are unable to produce specimens weighing, what they think is standard weight, they become discouraged and retire from the fancy.

If an embryo starts in with the idea of raising Flemish Giants that weigh 12 pounds when three months of age—and expects the doe (female) to give birth to nine or ten youngsters and raise them all, he will be rudely awakened from his dream. He may build air-castles and on paper will figure that he will soon become a wealthy man. But his castle in Spain will be shattered; he will become discouraged and off go his rabbits to the highest bidder, possibly very excellent specimens, for a mere song. If the beginner is correctly informed, then he will know what to expect. If he can raise Flemish Giants that will breed four times a year and give birth to six young at a time, he is doing well; he should also be satisfied if his youngsters weigh four and five pounds each, when three months of age.

We are anxious to have new fanciers join the ranks and help make the "Flemish" industry a thriving one. We want to see "Flemish" breeders make a success of the business. Those who anticipate earning a great deal of money and in a ridiculously short time, will not succeed, and what is more, **they will do the fancy more harm than good.**

A Flemish Giant buck should weigh eleven pounds or over; the doe should weigh thirteen pounds or more. In color the "Flemish" should be of a dark, steel gray. the breast and abdomen should be light—almost white. The shoulders should be broad and massive; the head should be large with ears erect.

Common-Sense Poultry Doctor

Every agricultural college and experiment station, every recognized expert authority, unhesitatingly admits, that this is the greatest book on poultry diseases and their treatment that was ever published. It is completely supplanting the old works and is rapidly becoming adopted as a text book by every institution where poultry keeping is taught.

One Professor Emphatically Remarks

"At last we have a book on Poultry Diseases and their treatment which not only covers the subject completely in a practical common sense manner, but also provides for the correct identification of diseases by the non-professional which I consider a vitally essential feature."

Its 16 chapters, covering 176 pages, embrace the very best tested and proven methods of treating sick and injured fowls. Its author is John H. Robinson, editor of the great eastern monthly, Farm Poultry. Mr. Robinson has drawn from every valuable source of reliable information, which, coupled with its own wide and varied experience, has resulted in what pleased purchasers enthusiastically proclaim as "the greatest ever." The price is 50 cents, all postage prepaid, and it is sold under an absolute guarantee of money back promptly if dissatisfied. This book is something every poultry keeper absolutely needs and it will save him many dollars in breeding and exhibition stock in the course of a year. Send post office or express money order cash or stamps.

PETERSEN'S HOUDANS

REIGN SUPREME AT THE NATION'S GREATEST SHOWS

My Record has never been approached by any breeder

BOSTON, 1900. In world famous competition, 135 Houdans exhibited, I won 1st cock, 1st and 2d pullet.

BOSTON, 1902. Silver cup, 1st cock, 1st hen, 1st pullet, 2d cockerel, all cash specials.

BOSTON, 1903. 100 dollar champion challenge cup for best male in class of 16 birds, 1st, 2d, 3d cockerel; 1st, 3d, 4th, 5th pullet, 1st hen, gold trophy, all cash specials.

BOSTON, 1905. We won every important prize. 1st and 2d cock. 1st, 2d, 3d cockerels. 1st, 2d and 4th hen, 1st, 2d, 3d and 5th pullets: $100 champion challenge cup for best male: American Houdan Club Cup for best cock, hen, cockerel and pullet. All shape and color ribbons: gold special. Such records prove the superiority of Petersen's strain of Houdans and defies competition.

BOSTON, 1906, We judged the Houdan exhibit and since then we have not shown, giving our customers the benefit of our experience in breeding winners.

ST. LOUIS EXPOSITION, 1904. Our Houdans were awarded the high honor of the Breeder's Badge and Diploma, being entered by the exhibitor as Petersen's strain of Houdan's.

PHILADELPHIA, 1900. We won every prominent ribbon, including three Silver Cups.

PAN AMERICAN EXPOSITION. We entered four birds, and got two regular and one special prize, including 1st cock.

We have also furnished our customers with birds that in strong competition has won the highest honors at Madison Square, Toronto, Guelph, Chicago, and other shows.

No matter where you want to exhibit, no matter what the competition, I can furnish the winners. Eggs in season.

REV. C. E. PETERSEN, DRAWER F, WEST PEMBROKE, MAINE
President American Houdan Club, From 1900 to 1907.

Start Your Chicks with the Right Kind of Feed and Keep Them Going

The chicks that start to grow right from the start are the ones that make the fine fowls. See that they get something their weak stomachs can digest.

Feed Little Chicks Can Digest

Darling's Chick Feed

Avoids Little Chick Troubles. No Waste

is afstarting and a growing feed. It is just the right size and all digestible. It's a ood that makes healthy chicks, because they get the benefit of what they eat.

Improper feeding is responsible for the most of the little chick troubles. Chicks fed on Darling's Chick Feed have the best chance to escape sour crop, indigestion, bowel complaint and diarrhoea.

All prices quoted on Darling Foods are for 100-lb. bags, F. O. B. Chicago or New York. Cash with order.

THE WORLD'S CHAMPION BLACK MINORCA COCK "MOMAMMED" AGAIN

In hottest competition "makes good" by **winning** the **Magnificent Silver Champion Male Cup** at **Hagerstown** in competition with **5,000 birds.** **REMSEN'S MINORCAS again** make the record-breaking winning of every **First** and **Special prize** at Hagerstown. At the same show my White Wyandottes **won more points** than any one of my competitors or, than any two combined. This was a remarkable win considering the competition which was composed of the "large strings" that compete at Madison Square every season. For the BEST, address

Push Your Hens This Winter

They are worth to you just what you get out of them. You can let that be little or you can make it much. You are keeping the hens for the eggs they will lay. Then why not start in with the determination to handle them right and get every egg that it is possible to get and make your profits something worth while?

Darling's Laying Food

...d by most of the truly successful poultry raisers—you should use it also. Its reputation is ...hed. It *does not work miracles*, it will *not* make your hens lay an egg a day; but it *does* ...g-making ingredients in right quantities, it *does* promote laying, and it *does* get the ...t results from every hen that she is capable of giving.

Don't you want to start in the winter with a food that fits the need of your hens, a food that induces l...ing in cold weather, a food scientifically prepared, a food that will pay for itself over and over in the greater number of eggs you will get? Then use Darling's Laying Food

In 100-lb. Sacks, Price $2.00 f. o. b. Chicago or New York

Darling's Scratching Food, Chicago - -	$2.00	Darling's Mica Crystal Grit	$ .65
New York - -	2.25	Darling's Beef Scraps	2.75
Darling's Forcing Food	2.00	Darling's Chick Eeed	2.50
		Darling's Oyster Shells	.70

All in 100-lb. Sacks, f. o. b. Chicago or New York. Cash with order.

We still publish that excellent little book, "Fill the Egg Basket." It has done great things ...winter egg sellers. Its pointers are just as good as they ever were. Send for a copy. Catalog ...ods and superior poultry appliances, free. Address

"Kellerstrass" White Orpingtons

ARE THE BIGGEST PAYERS

THE FAMOUS HEN, "PEGGY."

Value $10,000.

First Prize Winner at Jamestown Exposition, Madison Square Garden, New York, and everywhere else she has been shown. The reason we value the above hen at Ten Thousand Dollars is because we refused $2,500 for her after we sold five of her chicks for $7,500; **and we will give $10,000 for a "Crystal" White Orpington Hen that will equal her in every way.**

KELLERSTRASS STRAIN

"Crystal" White Orpingtons

Are the GRANDEST UTILITY birds on record today, and as to their FANCY QUALITY they won first at Madison Square Garden, New York, 1905, 1906, 1907, 1908; also at Crystal Palace, London, England, and Chicago and Boston. If you need some birds to IMPROVE YOUR STOCK or for the SHOW ROOM write us. We have them, and the KIND THAT WINS, as our past record shows. STOCK and EGGS for sale at all times. Remember, we are the ORIGINATORS of "CRYSTAL," White Orpingtons, and breed only the one kind. We devote our whole time to this one breed.

Life Members American White Orpington Club and the American Poultry Ass'n.
